SearchPath	<p>Sets the schema search path for the connection. This value is a string containing a comma-separated list of schema names. See Setting Search Paths in the Administrator's Guide for more information on the schema search path.</p> <p>Set After Connection: <code>VerticaConnection.setProperty()</code></p> <p>Default Value: "\$user", public, v_catalog, v_monitor, v_internal</p>
ThreePartNaming	<p>A Boolean value that controls how DatabaseMetaData reports the catalog name. When set to true, the database name is returned as the catalog name in the database metadata. When set to false, NULL is returned as the catalog name.</p> <p>Enable this option if your client software is set up to get the catalog name from the database metadata for use in a three-part name reference.</p> <p>Set After Connection: <code>VerticaConnection.setProperty()</code></p> <p>Default Value: true</p>
TransactionIsolation	<p>Sets the isolation level of the transactions that use the</p>

Property	Description
	<p>connection. See Changing the Transaction Isolation Level for details.</p> <p>Note: In previous versions of the Vertica JDBC driver, this property was only available using a getter and setter on the <code>PGConnection</code> object. You can now set it in the same way as other connection properties.</p> <p>Set After Connection: <code>Connection.setTransactionIsolation()</code></p> <p>Default Value: TRANSACTION_READ_COMMITTED</p>

Logging Properties

The properties that control client logging must be set before the connection is opened. None of these properties are required, and none can be changed after the `Connection` object has been instantiated.

Property	Description
LogLevel	<p>Sets the type of information logged by the JDBC driver. The value is set to one of the following values:</p> <ul style="list-style-type: none">• "DEBUG"• "ERROR"• "TRACE"• "WARNING"• "INFO"• "OFF" <p>Default Value: "OFF"</p>
LogNameSpace	<p>Restricts logging to just messages generated by a specific packages. Valid values are:</p> <ul style="list-style-type: none">• <code>com.vertica</code> — All messages generated by the JDBC driver• <code>com.vertica.jdbc</code> — All messages generated by the top-level

Property	Description
	<p>JDBC API</p> <ul style="list-style-type: none"> • <code>com.vertica.jdbc.kv</code> — All messages generated by the JDBC KV API) • <code>com.vertica.jdbc.core</code> — Connection and statement settings • <code>com.vertica.jdbc.io</code> — Client/server protocol messages • <code>com.vertica.jdbc.util</code> — Miscellaneous utilities • <code>com.vertica.jdbc.dataengine</code> — Query execution and result set iteration • <code>com.vertica.dataengine</code> — Query execution and result set iteration <p>Default Value: none</p>
LogPath	<p>Sets the path where the log file is written.</p> <p>Default Value: The current working directory</p>

Kerberos Connection Parameters

Use the following parameters to set the service and host name principals for client authentication using Kerberos.

Parameters	Description
JAASConfigName	<p>Provides the name of the JAAS configuration that contains the JAAS Krb5LoginModule and its settings</p> <p>Default Value: verticajdbc</p>
KerberosServiceName	<p>Provides the service name portion of the Vertica Kerberos principal, for example: <code>vertica/host@EXAMPLE.COM</code></p> <p>Default Value: vertica</p>
KerberosHostname	<p>Provides the instance or host name portion of the Vertica Kerberos principal, for example: <code>vertica/host@EXAMPLE.COM</code></p> <p>Default Value: Value specified in the servername connection string property</p>

Routable Connection API Connection Parameters

Use the following parameters to set properties to enable and configure the connection for Routable Connection lookups.

Parameters	Description
EnableRoutableQueries	Enables Routable Connection lookup. See Routing JDBC Queries Directly to a Single Node Default Value: false
FailOnMultiNodePlans	If the query plan requires more than one node, then the query fails. Only applicable when EnableRoutableQueries = true. Default Value: true
MetadataCacheLifetime	The time in seconds to keep projection metadata. Only applicable when EnableRoutableQueries = true. Default Value:
MaxPooledConnections	Cluster-wide maximum number of connections to keep in the VerticaRoutableConnection's internal pool. Only applicable when EnableRoutableQueries = true. Default Value: 20
MaxPooledConnections PerNode	Per-node maximum number of connections to keep in the VerticaRoutableConnection's internal pool. Only applicable when EnableRoutableQueries = true. Default Value: 5

Note: You can also use `VerticaConnection.setProperty()` method to set properties that have standard JDBC Connection setters, such as `AutoCommit`.

For information about manipulating these attributes, see [Setting and Getting Connection Property Values](#).

Setting and Getting Connection Property Values

You can set a connection property in any of three ways:

- Include the property name and value as part of the connection string you pass to the `DriverManager.getConnection()` method.
- Set the properties in a `Properties` object, and then pass it to the `DriverManager.getConnection()` method.
- Use the `VerticaConnection.setProperty()` method. With this approach, you can change only those connection properties that remain changeable after the connection has been established.

In addition, some of the standard JDBC connection properties have getters and setters on the `Connection` interface (such as `Connection.setAutoCommit()`).

Setting Properties When Connecting

There are two ways you can set connection properties when creating a connection to Vertica:

- In the connection string, using the same URL parameter format that you can use to set the username and password. The following example sets the SSL connection parameter to true:

```
"jdbc:vertica://VerticaHost:5433/db?user=UserName&password=Password&ssl=true"
```

Setting a host name using the `setProperty()` method overrides the host name set in a connection string as seen above. If this occurs, Vertica may not be able to connect to a host. For example, using the connection string above, the following overrides the `VerticaHost` name:

```
Properties props = new Properties();
props.setProperty("dataSource", dataSourceURL);
props.setProperty("database", database);
props.setProperty("user", user);
props.setProperty("password", password);
ps.setProperty("jdbcDriver", jdbcDriver);
props.setProperty("hostName", "NonVertica_host");
```

However, if a new connection or override connection is needed, you may enter a valid host name in the hostname properties object.

The `NonVertica_host` hostname overrides `VerticaHost` name in the connection string. To avoid this issue comment out the `props.setProperty("hostName", "NonVertica_host");` line:

```
//props.setProperty("hostName", "NonVertica_host");
```

- In a `Properties` object that you pass to the `getConnection()` call. You will need to import the `java.util.Properties` class in order to instantiate a `Properties` object. Then you use the `put()` method to add the property name and value to the object:

```
Properties myProp = new Properties();
myProp.put("user", "ExampleUser");
myProp.put("password", "password123");
myProp.put("LoginTimeout", "35");
Connection conn;
try {
    conn = DriverManager.getConnection(
        "jdbc:vertica://VerticaHost:/ExampleDB", myProp);
} catch (SQLException e) {
    e.printStackTrace();
}
```

Note: The data type of all of the values you set in the `Properties` object are strings, regardless of the property value's data type.

Getting and Setting Properties After Connecting

The `VerticaConnection.getProperty()` method lets you get the value of some connection properties. You can use `VerticaConnection.setProperty()` method to change the value for properties that can be set after the database connection has been established. Since these methods are Vertica-specific, to use them you must cast your `Connection` object to the `VerticaConnection` interface. To cast to `VerticaConnection`, you must either import it into your client application or use a fully-qualified reference (`com.vertica.jdbc.VerticaConnection`). The following example demonstrates getting and setting the value of the `DirectBatchInsert` property.

```
import java.sql.*;
import java.util.Properties;
import com.vertica.jdbc.*;

public class SetConnectionProperties {
    public static void main(String[] args) {
        // Note: If your application needs to run under Java 5, you need to
        // load the JDBC driver using Class.forName() here.
        Properties myProp = new Properties();
        myProp.put("user", "ExampleUser");
        myProp.put("password", "password123");
        // Set DirectBatchInsert to true initially
        myProp.put("DirectBatchInsert", "true");
        Connection conn;
        try {
            conn = DriverManager.getConnection(
                "jdbc:vertica://VerticaHost:5433/ExampleDB",
                myProp);
            // Show state of the DirectBatchInsert property. This was set at the
```

```
// time the connection was created.
System.out.println("DirectBatchInsert state: "
    + ((VerticaConnection) conn).getProperty(
        "DirectBatchInsert"));

// Change it and show it again
((VerticaConnection) conn).setProperty("DirectBatchInsert", false);
System.out.println("DirectBatchInsert state is now: " +
    ((VerticaConnection) conn).getProperty(
        "DirectBatchInsert"));
conn.close();
} catch (SQLException e) {
    e.printStackTrace();
}
}
```

When run, the example prints the following on the standard output:

```
DirectBatchInsert state: true
DirectBatchInsert state is now: false
```

Setting and Returning a Client Connection Label

The JDBC Client has a method to set and return the client connection label: `getClientInfo()` and `setClientInfo()`. You can use these methods with the SQL Functions [GET_CLIENT_LABEL](#) and [SET_CLIENT_LABEL](#).

When you use these two methods, make sure you pass the string value `APPLICATIONNAME` to both the setter and getter methods.

Use `setClientInfo()` to create a client label, and use `getClientInfo()` to return the client label:

```
import java.sql.*;
import java.util.Properties;

public class ClientLabelJDBC {

    public static void main(String[] args) {
        Properties myProp = new Properties();
        myProp.put("user", "dbadmin");
        myProp.put("password", "");
        myProp.put("loginTimeout", "35");
        Connection conn;
        try {
            conn = DriverManager.getConnection(
                "jdbc:vertica://docc05.verticacorp.com:5433/doccdb", myProp);
            System.out.println("Connected!");
            conn.setClientInfo("APPLICATIONNAME", "JDBC Client - Data Load");
            System.out.println("New Conn label: " + conn.getClientInfo("APPLICATIONNAME"));
            conn.close();
        } catch (SQLTransientConnectionException connException) {
            // There was a potentially temporary network error
        }
    }
}
```

```
// Could automatically retry a number of times here, but
// instead just report error and exit.
System.out.print("Network connection issue: ");
System.out.print(connException.getMessage());
System.out.println(" Try again later!");
return;
} catch (SQLException e) {
    // Either the username or password was wrong
    System.out.print("Could not log into database: ");
    System.out.print(e.getMessage());
    System.out.println(" Check the login credentials and try again.");
    return;
} catch (SQLException e) {
    // Catch-all for other exceptions
    e.printStackTrace();
}
}
```

When you run this method, it prints the following result to the standard output:

```
Connected!
New Conn Label: JDBC Client - Data Load
```

Setting the Locale for JDBC Sessions

You set the locale for a connection while opening it by including a `SET LOCALE` statement in the `ConnSettings` property, or by executing a [SET LOCALE](#) statement at any time after opening the connection. Changing the locale of a `Connection` object affects all of the `Statement` objects you instantiated using it.

You can get the locale by executing a [SHOW LOCALE](#) query. The following example demonstrates setting the locale using `ConnSettings` and executing a statement, as well as getting the locale:

```
import java.sql.*;
import java.util.Properties;

public class GetAndSetLocale {
    public static void main(String[] args) {

        // If running under a Java 5 JVM, you need to load the JDBC driver
        // using Class.forName here

        Properties myProp = new Properties();
        myProp.put("user", "ExampleUser");
        myProp.put("password", "password123");

        // Set Locale to true en_GB on connection. After the connection
        // is established, the JDBC driver runs the statements in the
        // ConnSettings property.
        myProp.put("ConnSettings", "SET LOCALE TO en_GB");
    }
}
```

```
Connection conn;
try {
    conn = DriverManager.getConnection(
        "jdbc:vertica://VerticaHost:5433/ExampleDB",
        myProp);

    // Execute a query to get the locale. The results should
    // show "en_GB" as the locale, since it was set by the
    // conn settings property.
    Statement stmt = conn.createStatement();
    ResultSet rs = null;
    rs = stmt.executeQuery("SHOW LOCALE");
    System.out.print("Query reports that Locale is set to: ");
    while (rs.next()) {
        System.out.println(rs.getString(2).trim());
    }

    // Now execute a query to set locale.
    stmt.execute("SET LOCALE TO en_US");

    // Run query again to get locale.
    rs = stmt.executeQuery("SHOW LOCALE");
    System.out.print("Query now reports that Locale is set to: ");
    while (rs.next()) {
        System.out.println(rs.getString(2).trim());
    }
    // Clean up
    conn.close();
} catch (SQLException e) {
    e.printStackTrace();
}
}
```

Running the above example displays the following on the system console:

```
Query reports that Locale is set to: en_GB (LEN)
Query now reports that Locale is set to: en_US (LEN)
```

Notes:

- JDBC applications use a UTF-16 character set encoding and are responsible for converting any non-UTF-16 encoded data to UTF-16. Failing to convert the data can result in errors or the data being stored incorrectly.
- The JDBC driver converts UTF-16 data to UTF-8 when passing to the Vertica server and converts data sent by Vertica server from UTF-8 to UTF-16 .

Changing the Transaction Isolation Level

Changing the transaction isolation level lets you choose how transactions prevent interference from other transactions. By default, the JDBC driver matches the transaction isolation level of the Vertica server. The Vertica default transaction isolation level is `READ_COMMITTED`, which means any changes made by a transaction cannot be read by any other transaction until after they are committed. This prevents a transaction from reading data inserted by another transaction that is later rolled back.

Vertica also supports the `SERIALIZABLE` transaction isolation level. This level locks tables to prevent queries from having the results of their `WHERE` clauses changed by other transactions. Locking tables can have a performance impact, since only one transaction is able to access the table at a time.

A transaction retains its isolation level until it completes, even if the session's isolation level changes during the transaction. Vertica internal processes (such as the Tuple Mover and refresh operations) and DDL operations always run at the `SERIALIZABLE` isolation level to ensure consistency.

You can change the transaction isolation level connection property after the connection has been established using the `Connection` object's setter (`setTransactionIsolation()`) and getter (`getTransactionIsolation()`). The value for transaction isolation property is an integer. The `Connection` interface defines constants to help you set the value in a more intuitive manner:

Constant	Value
<code>Connection.TRANSACTION_READ_COMMITTED</code>	2
<code>Connection.TRANSACTION_SERIALIZABLE</code>	8

Note: The `Connection` interface also defines several other transaction isolation constants (`READ_UNCOMMITTED` and `REPEATABLE_READ`). Since Vertica does not support these isolation levels, they are converted to `READ_COMMITTED` and `SERIALIZABLE`, respectively.

The following example demonstrates setting the transaction isolation level to `SERIALIZABLE`.

```
import java.sql.*;
import java.util.Properties;

public class SetTransactionIsolation {
```

```
public static void main(String[] args) {
    Properties myProp = new Properties();
    myProp.put("user", "ExampleUser");
    myProp.put("password", "password123");
    Connection conn;
    try {
        conn = DriverManager.getConnection(
            "jdbc:vertica://VerticaHost:5433/ExampleDB",
            myProp);
        // Get default transaction isolation
        System.out.println("Transaction Isolation Level: "
            + conn.getTransactionIsolation());
        // Set transaction isolation to SERIALIZABLE
        conn.setTransactionIsolation(Connection.TRANSACTION_SERIALIZABLE);
        // Get the transaction isolation again
        System.out.println("Transaction Isolation Level: "
            + conn.getTransactionIsolation());
        conn.close();
    } catch (SQLException e) {
        e.printStackTrace();
    }
}
```

Running the example results in the following being printed out to the console:

```
Transaction Isolation Level: 2Transaction Isolation Level: 8
```

Using a Pooling Data Source

A pooling data source uses a collection of persistent connections in order to reduce the overhead of repeatedly opening network connections between the client and server. Opening a new connection for each request is costly for both the server and the client than keeping a small pool of connections open constantly, ready to be used by new requests. When a request comes in, one of the pre-existing connections in the pool is assigned to it. Only if there are no free connections in the pool is a new connection created. Once the request is complete, the connection returns to the pool and waits to service another request.

The Vertica JDBC driver supports connection pooling as defined in the JDBC 4.0 standard. If you are using a J2EE-based application server in conjunction with Vertica, it should already have a built-in data pooling feature. All that is required is that the application server work with the `PooledConnection` interface implemented by Vertica's JDBC driver. An application server's pooling feature is usually well-tuned for the works loads that the server is designed to handle. See your application server's documentation for details on how to work with pooled connections. Normally, using pooled connections should be transparent in your code—you will just open connections and the application server will worry about the details of pooling them.

If you are not using an application server, or your application server does not offer connection pooling that is compatible with Vertica, you can use a third-party pooling library, such as the open-source c3p0 or DBCP libraries, to implement connection pooling.

Note: The Vertica Analytics Platform client driver's native connection load balancing feature works with third-party connection pooling supplied by application servers and third-party pooling libraries. See [Enabling Native Connection Load Balancing in JDBC](#) for more information.

Enabling Native Connection Load Balancing in JDBC

Native connection load balancing helps spread the overhead caused by client connections on the hosts in the Vertica database. Both the server and the client must enable native connection load balancing in order for it to have an effect. If both have enabled it, then when the client initially connects to a host in the database, the host picks a host to handle the client connection from a list of the currently up hosts in the database, and informs the client which host it has chosen.

If the initially-contacted host did not choose itself to handle the connection, the client disconnects, then opens a second connection to the host selected by the first host. The connection process to this second host proceeds as usual—if SSL is enabled, then SSL negotiations begin, otherwise the client begins the authentication process. See [About Native Connection Load Balancing](#) in the Administrator's Guide for details.

To enable native load balancing on your client, set the `ConnectionLoadBalance` connection parameter to `true`. The following example demonstrates connecting to the database several times with native connection load balancing enabled, and fetching the name of the node handling the connection from the `V_MONITOR.CURRENT_SESSION` system table.

```
import java.sql.*;
import java.util.Properties;
import java.sql.*;
import java.util.Properties;

public class JDBCLoadingBalanceExample {
    public static void main(String[] args) {
        Properties myProp = new Properties();
        myProp.put("user", "dbadmin");
        myProp.put("password", "example_password123");
        myProp.put("loginTimeout", "35");
        myProp.put("ConnectionLoadBalance", 1);
        Connection conn;
        for (int x=1; x <= 4; x++) {
            try {
                System.out.print("Connect attempt #" + x + "...");
                conn = DriverManager.getConnection(
                    "jdbc:vertica://node01.example.com:5433/vmart", myProp);
```

```
Statement stmt = conn.createStatement();
// Set the load balance policy to round robin before testing the database's load balancing.
stmt.execute("SELECT SET_LOAD_BALANCE_POLICY('ROUNDROBIN');");
// Query system to table to see what node we are connected to. Assume a single row
// in response set.
ResultSet rs = stmt.executeQuery("SELECT node_name FROM v_monitor.current_session;");
rs.next();
System.out.println("Connected to node " + rs.getString(1).trim());
conn.close();
} catch (SQLTransientConnectionException connException) {
// There was a potentially temporary network error
// Could automatically retry a number of times here, but
// instead just report error and exit.
System.out.print("Network connection issue: ");
System.out.print(connException.getMessage());
System.out.println(" Try again later!");
return;
} catch (SQLInvalidAuthorizationSpecException authException) {
// Either the username or password was wrong
System.out.print("Could not log into database: ");
System.out.print(authException.getMessage());
System.out.println(" Check the login credentials and try again.");
return;
} catch (SQLException e) {
// Catch-all for other exceptions
e.printStackTrace();
}
}
}
```

Running the above example produces the following output:

```
Connect attempt #1...Connected to node v_vmart_node0002
Connect attempt #2...Connected to node v_vmart_node0003
Connect attempt #3...Connected to node v_vmart_node0001
Connect attempt #4...Connected to node v_vmart_node0002
```

JDBC Connection Failover

If a client application attempts to connect to a host in the Vertica Analytics Platform cluster that is down, the connection attempt fails when using the default connection configuration. This failure usually returns an error to the user. The user must either wait until the host recovers and retry the connection or manually edit the connection settings to choose another host.

Due to Vertica Analytics Platform's distributed architecture, you usually do not care which database host handles a client application's connection. You can use the client driver's connection failover feature to prevent the user from getting connection errors when the host specified in the connection settings is unreachable. It gives you two ways to let the client driver

automatically attempt to connect to a different host if the one specified in the connection parameters is unreachable:

- Configure your DNS server to return multiple IP addresses for a host name. When you use this host name in the connection settings, the client attempts to connect to the first IP address from the DNS lookup. If the host at that IP address is unreachable, the client tries to connect to the second IP, and so on until it either manages to connect to a host or it runs out of IP addresses.
- Supply a list of backup hosts for the client driver to try if the primary host you specify in the connection parameters is unreachable.

For both methods, the process of failover is transparent to the client application (other than specifying the list of backup hosts, if you choose to use the list method of failover). If the primary host is unreachable, the client driver automatically tries to connect to other hosts.

Failover only applies to the initial establishment of the client connection. If the connection breaks, the driver does not automatically try to reconnect to another host in the database.

Choosing a Failover Method

You usually choose to use one of the two failover methods. However, they do work together. If your DNS server returns multiple IP addresses and you supply a list of backup hosts, the client first tries all of the IPs returned by the DNS server, then the hosts in the backup list.

Note: If a host name in the backup host list resolves to multiple IP addresses, the client does not try all of them. It just tries the first IP address in the list.

The DNS method of failover centralizes the configuration client failover. As you add new nodes to your Vertica Analytics Platform cluster, you can choose to add them to the failover list by editing the DNS server settings. All client systems that use the DNS server to connect to Vertica Analytics Platform automatically use connection failover without having to change any settings. However, this method does require administrative access to the DNS server that all clients use to connect to the Vertica Analytics Platform cluster. This may not be possible in your organization.

Using the backup server list is easier than editing the DNS server settings. However, it decentralizes the failover feature. You may need to update the application settings on each client system if you make changes to your Vertica Analytics Platform cluster.

Using DNS Failover

To use DNS failover, you need to change your DNS server's settings to map a single host name to multiple IP addresses of hosts in your Vertica Analytics Platform cluster. You then have all client applications use this host name to connect to Vertica Analytics Platform.

You can choose to have your DNS server return as many IP addresses for the host name as you want. In smaller clusters, you may choose to have it return the IP addresses of all of the hosts in your cluster. However, for larger clusters, you should consider choosing a subset of the hosts to return. Otherwise there can be a long delay as the client driver tries unsuccessfully to connect to each host in a database that is down.

Using the Backup Host List

To enable backup list-based connection failover, your client application has to specify at least one IP address or host name of a host in the `BackupServerNode` parameter. The host name or IP can optionally be followed by a colon and a port number. If not supplied, the driver defaults to the standard Vertica port number (5433). To list multiple hosts, separate them by a comma.

The following example demonstrates setting the `BackupServerNode` connection parameter to specify additional hosts for the connection attempt. The connection string intentionally has a non-existent node, so that the initial connection fails. The client driver has to resort to trying the backup hosts to establish a connection to Vertica.

```
import java.sql.*;
import java.util.Properties;

public class ConnectionFailoverExample {
    public static void main(String[] args) {
        // Assume using JDBC 4.0 driver on JVM 6+. No driver loading needed.
        Properties myProp = new Properties();
        myProp.put("user", "dbadmin");
        myProp.put("password", "vertica");
        // Set two backup hosts to be used if connecting to the first host
        // fails. All of these hosts will be tried in order until the connection
        // succeeds or all of the connections fail.
        myProp.put("BackupServerNode", "VerticaHost02,VerticaHost03");
        Connection conn;
        try {
            // The connection string is set to try to connect to a known
            // bad host (in this case, a host that never existed).
            conn = DriverManager.getConnection(
                "jdbc:vertica://BadVerticaHost:5433/vmart", myProp);
            System.out.println("Connected!");
            // Query system to table to see what node we are connected to.
            // Assume a single row in response set.
            Statement stmt = conn.createStatement();
```

```
ResultSet rs = stmt.executeQuery(
    "SELECT node_name FROM v_monitor.current_session;");
rs.next();
System.out.println("Connected to node " + rs.getString(1).trim());
// Done with connection.
conn.close();
} catch (SQLException e) {
    // Catch-all for other exceptions
    e.printStackTrace();
}
}
```

When run, the example outputs output similar to the following on the system console:

```
Connected!
Connected to node v_vmart_node0002
```

Notice that the connection was made to the first node in the backup list (node 2).

Notes

- When native connection load balancing is enabled, the additional servers specified in the BackupServerNode connection parameter are only used for the initial connection to a Vertica host. If host redirects the client to another host in the database cluster to handle its connection request, the second connection does not use the backup node list. This is rarely an issue, since native connection load balancing is aware of which nodes are currently up in the database. See [Enabling Native Connection Load Balancing in JDBC](#) for more information.

JDBC Data Types

The JDBC driver transparently converts most Vertica data types to the appropriate Java data type. In a few cases, an Vertica data type cannot be directly translated to a Java data type; these exceptions are explained in this section.

Numeric Data Alias Conversion

The Vertica server supports data type aliases for integer, float and numeric types. The JDBC driver reports these as its basic data types (BIGINT, DOUBLE PRECISION, and NUMERIC), as follows:

Vertica Server Types and Aliases	Vertica JDBC Type
INTEGER INT INT8 BIGINT SMALLINT TINYINT	BIGINT
DOUBLE PRECISION FLOAT5 FLOAT8 REAL	DOUBLE PRECISION
DECIMAL NUMERIC NUMBER MONEY	NUMERIC

If a client application retrieves the values into smaller data types, Vertica JDBC driver does not check for overflows. The following example demonstrates the results of this overflow.

```
import java.sql.*;  
import java.util.Properties;
```

```
public class JDBCDataTypes {
    public static void main(String[] args) {
        // If running under a Java 5 JVM, use you need to load the JDBC driver
        // using Class.forName here

        Properties myProp = new Properties();
        myProp.put("user", "ExampleUser");
        myProp.put("password", "password123");
        Connection conn;
        try {
            conn = DriverManager.getConnection(
                "jdbc:vertica://VerticaHost:5433/VMart",
                myProp);
            Statement statement = conn.createStatement();
            // Create a table that will hold a row of different types of
            // numeric data.
            statement.executeUpdate(
                "DROP TABLE IF EXISTS test_all_types cascade");
            statement.executeUpdate("CREATE TABLE test_all_types ("
                + "c0 INTEGER, c1 TINYINT, c2 DECIMAL, "
                + "c3 MONEY, c4 DOUBLE PRECISION, c5 REAL)");
            // Add a row of values to it.
            statement.executeUpdate("INSERT INTO test_all_types VALUES("
                + "11111111111111, 444, 555555555555.5555, "
                + "77777777.77, 888888888888888888.88, "
                + "10101010.101010101010)");
            // Query the new table to get the row back as a result set.
            ResultSet rs = statement
                .executeQuery("SELECT * FROM test_all_types");
            // Get the metadata about the row, including its data type.
            ResultSetMetaData md = rs.getMetaData();
            // Loop should only run once...
            while (rs.next()) {
                // Print out the data type used to defined the column, followed
                // by the values retrieved using several different retrieval
                // methods.

                String[] vertTypes = new String[] {"INTEGER", "TINYINT",
                    "DECIMAL", "MONEY", "DOUBLE PRECISION", "REAL"};

                for (int x=1; x<7; x++) {
                    System.out.println("\n\nColumn " + x + " (" + vertTypes[x-1]
                        + ")");
                    System.out.println("\tgetColumnType()\t\t"
                        + md.getColumnType(x));
                    System.out.println("\tgetColumnTypeName()\t\t"
                        + md.getColumnTypeName(x));
                    System.out.println("\tgetShort()\t\t"
                        + rs.getShort(x));
                    System.out.println("\tgetLong()\t\t" + rs.getLong(x));
                    System.out.println("\tgetInt()\t\t" + rs.getInt(x));
                    System.out.println("\tgetBytes()\t\t" + rs.getBytes(x));
                }
            }
            rs.close();
            statement.executeUpdate("drop table test_all_types cascade");
            statement.close();
        } catch (SQLException e) {
            e.printStackTrace();
        }
    }
}
```

```
}  
}  
}
```

The above example prints the following on the console when run:

```
Column 1 (INTEGER)  
  getColumnType()      -5  
  getColumnTypeName()  BIGINT  
  getShort()           455  
  getLong()            111111111111  
  getInt()             -558038585  
  getByte()            -57  
Column 2 (TINYINT)  
  getColumnType()      -5  
  getColumnTypeName()  BIGINT  
  getShort()           444  
  getLong()            444  
  getInt()             444  
  getByte()            -68  
Column 3 (DECIMAL)  
  getColumnType()      2  
  getColumnTypeName()  NUMERIC  
  getShort()           -1  
  getLong()            55555555555  
  getInt()             2147483647  
  getByte()            -1  
Column 4 (MONEY)  
  getColumnType()      2  
  getColumnTypeName()  NUMERIC  
  getShort()           -13455  
  getLong()            77777777  
  getInt()             77777777  
  getByte()            113  
Column 5 (DOUBLE PRECISION)  
  getColumnType()      8  
  getColumnTypeName()  DOUBLE PRECISION  
  getShort()           -1  
  getLong()            8888888888888900  
  getInt()             2147483647  
  getByte()            -1  
Column 6 (REAL)  
  getColumnType()      8  
  getColumnTypeName()  DOUBLE PRECISION  
  getShort()           8466  
  getLong()            10101010  
  getInt()             10101010  
  getByte()            18
```

Using Intervals with JDBC

The JDBC standard does not contain a data type for intervals (the duration between two points in time). To handle Vertica's [INTERVAL](#) data type, you must use JDBC's database-specific object type.

When reading an interval value from a result set, use the `ResultSet.getObject()` method to retrieve the value, and then cast it to one of the Vertica interval classes: `VerticaDayTimeInterval` (which represents all ten types of day/time intervals) or `VerticaYearMonthInterval` (which represents all three types of year/month intervals).

Note: The units interval style is not supported. Do not use the `SET INTERVALSTYLE` statement to change the interval style in your client applications.

Using Intervals in Batch Inserts

When inserting batches into tables that contain interval data, you must create instances of the `VerticaDayTimeInterval` or `VerticaYearMonthInterval` classes to hold the data you want to insert. You set values either when calling the class's constructor, or afterwards using setters. You then insert your interval values using the `PreparedStatement.setObject()` method. You can also use the `.setString()` method, passing it a string in `"DD HH:MM:SS"` or `"YY-MM"` format.

The following example demonstrates inserting data into a table containing a day/time interval and a year/month interval:

```
import java.sql.*;
import java.util.Properties;
// You need to import the Vertica JDBC classes to be able to instantiate
// the interval classes.
import com.vertica.jdbc.*;

public class IntervalDemo {
    public static void main(String[] args) {
        // If running under a Java 5 JVM, use you need to load the JDBC driver
        // using Class.forName here
        Properties myProp = new Properties();
        myProp.put("user", "ExampleUser");
        myProp.put("password", "password123");
        Connection conn;
        try {
            conn = DriverManager.getConnection(
                "jdbc:vertica://VerticaHost:5433/VMart", myProp);
            // Create table for interval values
            Statement stmt = conn.createStatement();
            stmt.execute("DROP TABLE IF EXISTS interval_demo");
            stmt.executeUpdate("CREATE TABLE interval_demo("
                + "DayInt INTERVAL DAY TO SECOND, "
                + "MonthInt INTERVAL YEAR TO MONTH)");
            // Insert data into interval columns using
            // VerticaDayTimeInterval and VerticaYearMonthInterval
            // classes.
            PreparedStatement pstmt = conn.prepareStatement(
                "INSERT INTO interval_demo VALUES(?,?)");
            // Create instances of the Vertica classes that represent
            // intervals.
            VerticaDayTimeInterval dayInt = new VerticaDayTimeInterval(10, 0,
                5, 40, 0, 0, false);
```

```
VerticaYearMonthInterval monthInt = new VerticaYearMonthInterval(
    10, 6, false);
// These objects can also be manipulated using setters.
dayInt.setHour(7);
// Add the interval values to the batch
((VerticaPreparedStatement) pstmt).setObject(1, dayInt);
((VerticaPreparedStatement) pstmt).setObject(2, monthInt);
pstmt.addBatch();
// Set another row from strings.
// Set day interval in "days HH:MM:SS" format
pstmt.setString(1, "10 10:10:10");
// Set year to month value in "MM-YY" format
pstmt.setString(2, "12-09");
pstmt.addBatch();
// Execute the batch to insert the values.
try {
    pstmt.executeBatch();
} catch (SQLException e) {
    System.out.println("Error message: " + e.getMessage());
}
```

Reading Interval Values

You read an interval value from a result set using the `ResultSet.getObject()` method, and cast the object to the appropriate Vertica object class: `VerticaDayTimeInterval` for day/time intervals or `VerticaYearMonthInterval` for year/month intervals. This is easy to do if you know that the column contains an interval, and you know what type of interval it is. If your application cannot assume the structure of the data in the result set it reads in, you can test whether a column contains a database-specific object type, and if so, determine whether the object belongs to either the `VerticaDayTimeInterval` or `VerticaYearMonthInterval` classes.

```
// Retrieve the interval values inserted by previous demo.
// Query the table to get the row back as a result set.
ResultSet rs = stmt.executeQuery("SELECT * FROM interval_demo");
// If you do not know the types of data contained in the result set,
// you can read its metadata to determine the type, and use
// additional information to determine the interval type.
ResultSetMetaData md = rs.getMetaData();
while (rs.next()) {
    for (int x = 1; x <= md.getColumnCount(); x++) {
        // Get data type from metadata
        int colDataType = md.getColumnType(x);
        // You can get the type in a string:
        System.out.println("Column " + x + " is a "
            + md.getColumnTypeName(x));
        // Normally, you'd have a switch statement here to
        // handle all sorts of column types, but this example is
        // simplified to just handle database-specific types
        if (colDataType == Types.OTHER) {
            // Column contains a database-specific type. Determine
            // what type of interval it is. Assuming it is an
            // interval...
```

```
Object columnVal = rs.getObject(x);
if (columnVal instanceof VerticaDayTimeInterval) {
    // We know it is a date time interval
    VerticaDayTimeInterval interval =
        (VerticaDayTimeInterval) columnVal;
    // You can use the getters to access the interval's
    // data
    System.out.print("Column " + x + "'s value is ");
    System.out.print(interval.getDay() + " Days ");
    System.out.print(interval.getHour() + " Hours ");
    System.out.println(interval.getMinute()
        + " Minutes");
} else if (columnVal instanceof VerticaYearMonthInterval) {
    VerticaYearMonthInterval interval =
        (VerticaYearMonthInterval) columnVal;
    System.out.print("Column " + x + "'s value is ");
    System.out.print(interval.getYear() + " Years ");
    System.out.println(interval.getMonth() + " Months");
} else {
    System.out.println("Not an interval.");
}
}
}
} catch (SQLException e) {
    e.printStackTrace();
}
}
```

The example prints the following to the console:

```
Column 1 is a INTERVAL DAY TO SECOND
Column 1's value is 10 Days 7 Hours 5 Minutes
Column 2 is a INTERVAL YEAR TO MONTH
Column 2's value is 10 Years 6 Months
Column 1 is a INTERVAL DAY TO SECOND
Column 1's value is 10 Days 10 Hours 10 Minutes
Column 2 is a INTERVAL YEAR TO MONTH
Column 2's value is 12 Years 9 Months
```

Another option is to use database metadata to find columns that contain intervals.

```
// Determine the interval data types by examining the database
// metadata.
DatabaseMetaData dbmd = conn.getMetaData();
ResultSet dbMeta = dbmd.getColumns(null, null, "interval_demo", null);
int colcount = 0;
while (dbMeta.next()) {

    // Get the metadata type for a column.
    int javaType = dbMeta.getInt("DATA_TYPE");

    System.out.println("Column " + ++colcount + " Type name is " +
        dbMeta.getString("TYPE_NAME"));

    if(javaType == Types.OTHER) {
```

```
// The SQL_DATETIME_SUB column in the metadata tells you
// Specifically which subtype of interval you have.
// The VerticaDayTimeInterval.isDayTimeInterval()
// methods tells you if that value is a day time.
//
int intervalType = dbMeta.getInt("SQL_DATETIME_SUB");
if(VerticaDayTimeInterval.isDayTimeInterval(intervalType)) {
    // Now you know it is one of the 10 day/time interval types.
    // When you select this column you can cast to
    // VerticaDayTimeInterval.
    // You can get more specific by checking intervalType
    // against each of the 10 constants directly, but
    // they all are represented by the same object.
    System.out.println("column " + colcount + " is a " +
        "VerticaDayTimeInterval intervalType = "
        + intervalType);
} else if(VerticaYearMonthInterval.isYearMonthInterval(
    intervalType)) {
    //now you know it is one of the 3 year/month intervals,
    //and you can select the column and cast to
    // VerticaYearMonthInterval
    System.out.println("column " + colcount + " is a " +
        "VerticaDayTimeInterval intervalType = "
        + intervalType);
} else {
    System.out.println("Not an interval type.");
}
}
```

Executing Queries Through JDBC

To run a query through JDBC:

1. Connect with the Vertica database. See [Creating and Configuring a Connection](#).
2. Run the query.

The method you use to run the query depends on the type of query you want to run:

- a DDL query that does not return a result set.
- a DDL query that returns a result set.
- a DML query

Executing DDL (Data Definition Language) Queries

To run DDL queries, such as [CREATE TABLE](#) and [COPY](#), use the `Statement.execute()` method. You get an instance of this class by calling the `createStatement` method of your

connection object.

The following example creates an instance of the `Statement` class and uses it to execute a `CREATE TABLE` and a `COPY` query:

```
Statement stmt = conn.createStatement();
stmt.execute("CREATE TABLE address_book (Last_Name char(50) default ',' +
'First_Name char(50),Email char(50),Phone_Number char(50)");
stmt.execute("COPY address_book FROM 'address.dat' DELIMITER ',' NULL 'null'");
```

Executing Queries That Return Result Sets

Use the `Statement` class's `executeQuery` method to execute queries that return a result set, such as `SELECT`. To get the data from the result set, use methods such as `getInt`, `getString`, and `getDouble` to access column values depending upon the data types of columns in the result set. Use `ResultSet.next` to advance to the next row of the data set.

```
ResultSet rs = null;
rs = stmt.executeQuery("SELECT First_Name, Last_Name FROM address_book");
int x = 1;
while(rs.next()){
    System.out.println(x + ". " + rs.getString(1).trim() + " "
        + rs.getString(2).trim());
    x++;
}
```

Note: The Vertica JDBC driver does not support scrollable cursors. You can only read forwards through the result set.

Executing DML (Data Manipulation Language) Queries Using `executeUpdate`

Use the `executeUpdate` method for DML SQL queries that change data in the database, such as `INSERT`, `UPDATE` and `DELETE` which do not return a result set.

```
stmt.executeUpdate("INSERT INTO address_book " +
"VALUES ('Ben-Shachar', 'Tamar', 'tamarrow@example.com', " +
"555-380-6466'");
stmt.executeUpdate("INSERT INTO address_book (First_Name, Email) " +
"VALUES ('Pete','pete@example.com')");
```

Note: The Vertica JDBC driver's `Statement` class supports executing multiple statements in the SQL string you pass to the `execute` method. The `PreparedStatement` class does not support using multiple statements in a single execution.

Loading Data Through JDBC

You can use any of the following methods to load data via the JDBC interface:

- Executing a SQL INSERT statement to insert a single row directly.
- Batch loading data using a prepared statement.
- Bulk loading data from files or streams using [COPY](#).

When loading data into Vertica, you need to decide whether to write data to the Write Optimized Store (WOS) or the Read Optimized Store (ROS). By default, most data loading methods insert data into the WOS until it fills up, then insert any additional data directly into ROS containers (called AUTO mode). This is the best method to use when frequently loading small amounts of data (often referred to as trickle-loading). When performing less frequent large data loads (any loads over 100MB of data at once), you should change this behavior to insert data directly into the ROS.

The following sections explain in detail how you load data using JDBC.

Using a Single Row Insert

The simplest way to insert data into a table is to use the SQL [INSERT](#) statement. You can use this statement by instantiating a member of the Statement class, and use its `executeUpdate()` method to run your SQL statement.

The following code fragment demonstrates how you can create a Statement object and use it to insert data into a table named `address_book`:

```
Statement stmt = conn.createStatement();
stmt.executeUpdate("INSERT INTO address_book " +
    "VALUES ('Smith', 'John', 'jsmith@example.com', " +
    "'555-123-4567')");
```

This method has a few drawbacks: you need convert your data to string and escape any special characters in your data. A better way to insert data is to use prepared statements. See [Batch Inserts Using JDBC Prepared Statements](#).

Using LONG VARCHAR and LONG VARBINARY Data Types with JDBC

Using LONG VARCHAR and LONG VARBINARY data types in a JDBC client application is similar to using VARCHAR and VARBINARY data types. The JDBC driver transparently handles the conversion (for example, between a Java String object and a LONG VARCHAR). The following example code demonstrates inserting and retrieving a LONG VARCHAR string. It uses the JDBC Types class to determine the data type of the string returned by Vertica, although it does not actually need to know whether the database column is a LONG VARCHAR or just a VARCHAR in order to retrieve the value.

```
import java.sql.*;
import java.util.Properties;

public class LongVarcharExample {
    public static void main(String[] args) {
        try {
            Class.forName("com.vertica.jdbc.Driver");
        } catch (ClassNotFoundException e) {
            System.err.println("Could not find the JDBC driver class.");
            e.printStackTrace();
            return;
        }
        Properties myProp = new Properties();
        myProp.put("user", "ExampleUser");
        myProp.put("password", "password123");
        Connection conn;
        try {
            conn = DriverManager.getConnection(
                "jdbc:vertica://VerticaHost:5433/ExampleDB",
                myProp);
            // establish connection and make a table for the data.
            Statement stmt = conn.createStatement();

            // How long we want the example string to be. This is
            // larger than can fit into a traditional VARCHAR (which is limited
            // to 65000.
            int length = 100000;

            // Create a table with a LONG VARCHAR column that can store
            // the string we want to insert.
            stmt.execute("DROP TABLE IF EXISTS longtable CASCADE");
            stmt.execute("CREATE TABLE longtable (text LONG VARCHAR(" + length
                + "))");
            // Build a long string by appending an integer to a string builder
            // until we hit the size limit. Will result in a string
            // containing 01234567890123....
            StringBuilder sb = new StringBuilder(length);
            for (int i = 0; i < length; i++)
            {
                sb.append(i % 10);
            }
        }
    }
}
```

```
String value = sb.toString();

System.out.println("String value is " + value.length() +
    " characters long.");

// Create the prepared statement
PreparedStatement pstmt = conn.prepareStatement(
    "INSERT INTO longtable (text)" +
    " VALUES(?)");
try {
    // Insert LONG VARCHAR value
    System.out.println("Inserting LONG VARCHAR value");
    pstmt.setString(1, value);
    pstmt.addBatch();
    pstmt.executeBatch();

    // Query the table we created to get the value back.
    ResultSet rs = null;
    rs = stmt.executeQuery("SELECT * FROM longtable");

    // Get metadata about the result set.
    ResultSetMetaData rsmd = rs.getMetaData();
    // Print the type of the first column. Should be
    // LONG VARCHAR. Also check it against the Types class, to
    // recognize it programmatically.
    System.out.println("Column #1 data type is: " +
        rsmd.getColumnTypeName(1));
    if (rsmd.getColumnType(1) == Types.LONGVARCHAR) {
        System.out.println("It is a LONG VARCHAR");
    } else {
        System.out.println("It is NOT a LONG VARCHAR");
    }

    // Print out the string length of the returned value.
    while (rs.next()) {
        // Use the same getString method to get the value that you
        // use to get the value of a VARCHAR.
        System.out.println("Returned string length: " +
            rs.getString(1).length());
    }
} catch (SQLException e) {
    System.out.println("Error message: " + e.getMessage());
    return; // Exit if there was an error
}
// Cleanup
conn.close();
} catch (SQLException e) {
    e.printStackTrace();
}
}
```

Note: Do not use inefficient encoding formats for LONG VARBINARY and LONG VARCHAR values. Vertica cannot load encoded values larger than 32MB, even if the decoded value is less than 32 MB in size. For example, Vertica returns an error if you attempt to load a 32MB LONG VARBINARY value encoded in octal format, since the

octal encoding quadruples the size of the value (each byte is converted into a backslash followed by three digits).

Batch Inserts Using JDBC Prepared Statements

You can load batches of data into Vertica using prepared **INSERT** statements—server-side statements that you set up once, and then call repeatedly. You instantiate a member of the `PreparedStatement` class with a SQL statement that contains question mark placeholders for data. For example:

```
PreparedStatement pstmt = conn.prepareStatement(  
    "INSERT INTO customers(last, first, id) VALUES(?,?,?)");
```

You then set the parameters using data-type-specific methods on the `PreparedStatement` object, such as `setString()` and `setInt()`. Once your parameters are set, call the `addBatch()` method to add the row to the batch. When you have a complete batch of data ready, call the `executeBatch()` method to execute the insert batch.

Behind the scenes, the batch insert is converted into a **COPY** statement. When the connection's `AutoCommit` parameter is disabled, Vertica keeps the **COPY** statement open and uses it to load subsequent batches until the transaction is committed, the cursor is closed, or your application executes anything else (or executes any statement using another `Statement` or `PreparedStatement` object). Using a single **COPY** statement for multiple batch inserts makes loading data more efficient. If you are loading multiple batches, you should disable the `AutoCommit` property of the database to take advantage of this increased efficiency.

When performing batch inserts, experiment with various batch and row sizes to determine the settings that provide the best performance.

The following example demonstrates using a prepared statement to batch insert data.

```
import java.sql.*;  
import java.util.Properties;  
  
public class BatchInsertExample {  
    public static void main(String[] args) {  
        Properties myProp = new Properties();  
        myProp.put("user", "ExampleUser");  
        myProp.put("password", "password123");  
  
        //Set streamingBatchInsert to True to enable streaming mode for batch inserts.  
        //myProp.put("streamingBatchInsert", "True");  
  
        Connection conn;  
        try {  
            conn = DriverManager.getConnection(  
                "jdbc:vertica://VerticaHost:5433/ExampleDB",  
                myProp);  
            // establish connection and make a table for the data.  
            Statement stmt = conn.createStatement();
```

```
// Set AutoCommit to false to allow Vertica to reuse the same
// COPY statement
conn.setAutoCommit(false);

// Drop table and recreate.
stmt.execute("DROP TABLE IF EXISTS customers CASCADE");
stmt.execute("CREATE TABLE customers (CustID int, Last_Name"
    + " char(50), First_Name char(50),Email char(50), "
    + "Phone_Number char(12))");
// Some dummy data to insert.
String[] firstNames = new String[] { "Anna", "Bill", "Cindy",
    "Don", "Eric" };
String[] lastNames = new String[] { "Allen", "Brown", "Chu",
    "Dodd", "Estavez" };
String[] emails = new String[] { "aang@example.com",
    "b.brown@example.com", "cindy@example.com",
    "d.d@example.com", "e.estavez@example.com" };
String[] phoneNumbers = new String[] { "123-456-7890",
    "555-444-3333", "555-867-5309",
    "555-555-1212", "781-555-0000" };
// Create the prepared statement
PreparedStatement pstmt = conn.prepareStatement(
    "INSERT INTO customers (CustID, Last_Name, " +
    "First_Name, Email, Phone_Number)" +
    " VALUES(?,?,?,?,?)");
// Add rows to a batch in a loop. Each iteration adds a
// new row.
for (int i = 0; i < firstNames.length; i++) {
    // Add each parameter to the row.
    pstmt.setInt(1, i + 1);
    pstmt.setString(2, lastNames[i]);
    pstmt.setString(3, firstNames[i]);
    pstmt.setString(4, emails[i]);
    pstmt.setString(5, phoneNumbers[i]);
    // Add row to the batch.
    pstmt.addBatch();
}

try {
    // Batch is ready, execute it to insert the data
    pstmt.executeBatch();
} catch (SQLException e) {
    System.out.println("Error message: " + e.getMessage());
    return; // Exit if there was an error
}

// Commit the transaction to close the COPY command
conn.commit();

// Print the resulting table.
ResultSet rs = null;
rs = stmt.executeQuery("SELECT CustID, First_Name, "
    + "Last_Name FROM customers ORDER BY CustID");
while (rs.next()) {
    System.out.println(rs.getInt(1) + " - "
        + rs.getString(2).trim() + " "
        + rs.getString(3).trim());
}
}
```

```
// Cleanup
conn.close();
} catch (SQLException e) {
    e.printStackTrace();
}
}
```

The result of running the example code is:

```
1 - Anna Allen
2 - Bill Brown
3 - Cindy Chu
4 - Don Dodd
5 - Eric Estavez
```

Streaming Batch Inserts

By default, Vertica performs batch inserts by caching each row and inserting the cache when the user calls the `executeBatch()` method. Vertica also supports streaming batch inserts. A streaming batch insert adds a row to the database each time the user calls `addBatch()`. Streaming batch inserts improve database performance by allowing parallel processing and reducing memory demands.

Note: Once you begin a streaming batch insert, you cannot make other JDBC calls that require client-server communication until you have executed the batch or closed or rolled back the connection.

To enable streaming batch inserts, set the `streamingBatchInsert` property to `True`. The preceding code sample includes a line enabling `streamingBatchInsert` mode. Remove the `//` comment marks to enable this line and activate streaming batch inserts.

The following table explains the various batch insert methods and how their behavior differs between default batch insert mode and streaming batch insert mode.

Method	Default Batch Insert Behavior	Streaming Batch Insert Behavior
<code>addBatch()</code>	Adds a row to the row cache.	Inserts a row into the database.
<code>executeBatch()</code>	Adds the contents of the row cache to the database in a single action.	Sends an end-of-batch message to the server and returns an array of integers indicating the success or failure of each <code>addBatch()</code> attempt.

<code>clearBatch()</code>	Clears the row cache without inserting any rows.	Not supported. Triggers an exception if used when streaming batch inserts are enabled.
---------------------------	--	--

Notes

- Using the `PreparedStatement.setFloat()` method can cause rounding errors. If precision is important, use the `.setDouble()` method instead.
- The `PreparedStatement` object caches the connection's `AutoCommit` property when the statement is prepared. Later changes to the `AutoCommit` property have no effect on the prepared statement.

Loading Batches Directly into ROS

When loading large batches of data (more than 100MB or so), you should load the data directly into ROS containers. Inserting directly into ROS is more efficient for large loads than AUTO mode, since it avoids overflowing the WOS and spilling the remainder of the batch to ROS. Otherwise, the Tuple Mover has to perform a moveout on the data in the WOS, while subsequent data is directly written into ROS containers causing your data to be segmented across storage containers.

When you load data using AUTO mode, Vertica inserts the data first into the WOS. If the WOS is full, Vertica inserts the data directly into ROS. For details about load options, see [Choosing a Load Method](#).

To directly load batches into ROS, set the `directBatchInsert` connection property to true. See [Setting and Getting Connection Property Values](#) for an explanation of how to set connection properties. When this property is set to true, all batch inserts bypass the WOS and load directly into a ROS container.

If all of batches being inserted using a connection should be inserted into the ROS, you should set the `DirectBatchInsert` connection property to true in the `Properties` object you use to create the connection:

```
Properties myProp = new Properties();
myProp.put("user", "ExampleUser");
myProp.put("password", "password123");
// Enable directBatchInsert for this connection
myProp.put("DirectBatchInsert", "true");
Connection conn;
try {
    conn = DriverManager.getConnection(
        "jdbc:vertica://VerticaHost:5433/ExampleDB", myProp);
    ...
}
```

If you will be using the connection for inserting both large and small batches (or you do not know the size batches you will be inserting when you create the `Connection` object), you can set the `DirectBatchInsert` property after the connection has been established using the `VerticaConnection.setProperty` method:

```
((VerticaConnection)conn).setProperty("DirectBatchInsert", true);
```

See [Setting and Getting Connection Property Values](#) for a full example of setting `DirectBatchInsert`.

Error Handling During Batch Loads

When loading individual batches, you can find how many rows were accepted and what rows were rejected (see [Identifying Accepted and Rejected Rows](#) for details). If you have disabled the `AutoCommit` connection setting, other errors (such as disk space errors, for example) do not occur while inserting individual batches. This behavior is caused by having a single SQL `COPY` statement perform the loading of multiple consecutive batches (which makes the load process more efficient). It is only when the `COPY` statement closes that the batched data is committed and Vertica reports other types of errors.

Therefore, your bulk loading application should be prepared to check for errors when the `COPY` statement closes. You can trigger the `COPY` statement to close by:

- ending the batch load transaction by calling `Connection.commit()`
- closing the statement using `Statement.close()`
- setting the connection's `AutoCommit` property to `true` before inserting the last batch in the load

Note: The `COPY` statement also closes if you execute any non-insert statement or execute any statement using a different `Statement` or `PreparedStatement` object. Ending the `COPY` statement using either of these methods can lead to confusion and a harder-to-maintain application, since you would need to handle batch load errors in a non-batch load statement. You should explicitly end the `COPY` statement at the end of your batch load and handle any errors at that time.

Identifying Accepted and Rejected Rows (JDBC)

The return value of `PreparedStatement.executeBatch` is an integer array containing the success or failure status of inserting each row. A value `1` means the row was accepted and a value of `-3` means that the row was rejected. In the case where an exception occurred during

the batch execution, you can also get the array using `BatchUpdateException.getUpdateCounts()`.

The following example extends the example shown in [Batch Inserts Using JDBC Prepared Statements](#) to retrieve this array and display the results the batch load.

```
import java.sql.*;
import java.util.Arrays;
import java.util.Properties;

public class BatchInsertErrorHandlingExample {
    public static void main(String[] args) {
        Properties myProp = new Properties();
        myProp.put("user", "ExampleUser");
        myProp.put("password", "password123");
        Connection conn;

        // establish connection and make a table for the data.
        try {
            conn = DriverManager.getConnection(
                "jdbc:vertica://VerticaHost:5433/ExampleDB",
                myProp);

            // Disable auto commit
            conn.setAutoCommit(false);

            // Create a statement
            Statement stmt = conn.createStatement();
            // Drop table and recreate.
            stmt.execute("DROP TABLE IF EXISTS customers CASCADE");
            stmt.execute("CREATE TABLE customers (CustID int, Last_Name"
                + " char(50), First_Name char(50), Email char(50), "
                + "Phone_Number char(12))");

            // Some dummy data to insert. The one row won't insert because
            // the phone number is too long for the phone column.
            String[] firstNames = new String[] { "Anna", "Bill", "Cindy",
                "Don", "Eric" };
            String[] lastNames = new String[] { "Allen", "Brown", "Chu",
                "Dodd", "Estavez" };
            String[] emails = new String[] { "aang@example.com",
                "b.brown@example.com", "cindy@example.com",
                "d.d@example.com", "e.estavez@example.com" };
            String[] phoneNumbers = new String[] { "123-456-789",
                "555-444-3333", "555-867-53093453453",
                "555-555-1212", "781-555-0000" };

            // Create the prepared statement
            PreparedStatement pstmt = conn.prepareStatement(
                "INSERT INTO customers (CustID, Last_Name, " +
                "First_Name, Email, Phone_Number) +
                " VALUES(?, ?, ?, ?, ?)");

            // Add rows to a batch in a loop. Each iteration adds a
            // new row.
            for (int i = 0; i < firstNames.length; i++) {
                // Add each parameter to the row.
                pstmt.setInt(1, i + 1);
            }
        } catch (SQLException e) {
            e.printStackTrace();
        }
    }
}
```

```
pstmt.setString(2, lastNames[i]);
pstmt.setString(3, firstNames[i]);
pstmt.setString(4, emails[i]);
pstmt.setString(5, phoneNumbers[i]);
// Add row to the batch.
pstmt.addBatch();
}

// Integer array to hold the results of inserting
// the batch. Will contain an entry for each row,
// indicating success or failure.
int[] batchResults = null;

try {
    // Batch is ready, execute it to insert the data
    batchResults = pstmt.executeBatch();
} catch (BatchUpdateException e) {
    // We expect an exception here, since one of the
    // inserted phone numbers is too wide for its column. All of the
    // rest of the rows will be inserted.
    System.out.println("Error message: " + e.getMessage());

    // Batch results isn't set due to exception, but you
    // can get it from the exception object.
    //
    // In your own code, you shouldn't assume the a batch
    // exception occurred, since exceptions can be thrown
    // by the server for a variety of reasons.
    batchResults = e.getUpdateCounts();
}
// You should also be prepared to catch SQLExceptions in your own
// application code, to handle dropped connections and other general
// problems.

// Commit the transaction
conn.commit();

// Print the array holding the results of the batch insertions.
System.out.println("Return value from inserting batch: "
    + Arrays.toString(batchResults));
// Print the resulting table.
ResultSet rs = null;
rs = stmt.executeQuery("SELECT CustID, First_Name, "
    + "Last_Name FROM customers ORDER BY CustID");
while (rs.next()) {
    System.out.println(rs.getInt(1) + " - "
        + rs.getString(2).trim() + " "
        + rs.getString(3).trim());
}

// Cleanup
conn.close();
} catch (SQLException e) {
    e.printStackTrace();
}
}
```

Running the above example produces the following output on the console:

```
Error message: [Vertica][VJDBC](100172) One or more rows were rejected by the server.Return value
from inserting batch: [1, 1, -3, 1, 1]
1 - Anna Allen
2 - Bill Brown
4 - Don Dodd
5 - Eric Estavez
```

Notice that the third row failed to insert because its phone number is too long for the Phone_Number column. All of the rest of the rows in the batch (including those after the error) were correctly inserted.

Note: It is more efficient for you to ensure that the data you are inserting is the correct data type and width for the table column you are inserting it into than to handle exceptions after the fact.

Rolling Back Batch Loads on the Server

Batch loads always insert all of their data, even if one or more rows is rejected. Only the rows that caused errors in a batch are not loaded. When the database connection's `AutoCommit` property is true, batches automatically commit their transactions when they complete, so once the batch finishes loading, the data is committed.

In some cases, you may want all of the data in a batch to be successfully inserted—none of the data should be committed if an error occurs. The best way to accomplish this is to turn off the database connection's `AutoCommit` property to prevent batches from automatically committing themselves. Then, if a batch encounters an error, you can roll back the transaction after catching the `BatchUpdateException` caused by the insertion error.

The following example demonstrates performing a rollback if any error occurs when loading a batch.

```
import java.sql.*;
import java.util.Arrays;
import java.util.Properties;

public class RollbackBatchOnError {
    public static void main(String[] args) {
        Properties myProp = new Properties();
        myProp.put("user", "ExampleUser");
        myProp.put("password", "password123");
        Connection conn;
        try {
            conn = DriverManager.getConnection(
                "jdbc:vertica://VerticaHost:5433/ExampleDB",
                myProp);
            // Disable auto-commit. This will allow you to roll back a
            // a batch load if there is an error.
            conn.setAutoCommit(false);
            // establish connection and make a table for the data.
```

```
Statement stmt = conn.createStatement();
// Drop table and recreate.
stmt.execute("DROP TABLE IF EXISTS customers CASCADE");
stmt.execute("CREATE TABLE customers (CustID int, Last_Name"
    + " char(50), First_Name char(50),Email char(50), "
    + "Phone_Number char(12))");

// Some dummy data to insert. The one row won't insert because
// the phone number is too long for the phone column.
String[] firstNames = new String[] { "Anna", "Bill", "Cindy",
    "Don", "Eric" };
String[] lastNames = new String[] { "Allen", "Brown", "Chu",
    "Doddd", "Estavez" };
String[] emails = new String[] { "aang@example.com",
    "b.brown@example.com", "cindy@example.com",
    "d.d@example.com", "e.estavez@example.com" };
String[] phoneNumbers = new String[] { "123-456-789",
    "555-444-3333", "555-867-53094535", "555-555-1212",
    "781-555-0000" };

// Create the prepared statement
PreparedStatement pstmt = conn.prepareStatement(
    "INSERT INTO customers (CustID, Last_Name, " +
    "First_Name, Email, Phone_Number) "+
    "VALUES(?,?,?,?,?)");

// Add rows to a batch in a loop. Each iteration adds a
// new row.
for (int i = 0; i < firstNames.length; i++) {
    // Add each parameter to the row.
    pstmt.setInt(1, i + 1);
    pstmt.setString(2, lastNames[i]);
    pstmt.setString(3, firstNames[i]);
    pstmt.setString(4, emails[i]);
    pstmt.setString(5, phoneNumbers[i]);
    // Add row to the batch.
    pstmt.addBatch();
}

// Integer array to hold the results of inserting
// the batch. Will contain an entry for each row,
// indicating success or failure.
int[] batchResults = null;
try {
    // Batch is ready, execute it to insert the data
    batchResults = pstmt.executeBatch();
    // If we reach here, we inserted the batch without errors.
    // Commit it.
    System.out.println("Batch insert successful. Committing.");
    conn.commit();
} catch (BatchUpdateException e) {
    System.out.println("Error message: " + e.getMessage());
    // Batch results isn't set due to exception, but you
    // can get it from the exception object.
    batchResults = e.getUpdateCounts();
    // Roll back the batch transaction.
    System.out.println("Rolling back batch insertion");
    conn.rollback();
}
catch (SQLException e) {
    // General SQL errors, such as connection issues, throw
    // SQLExceptions. Your application should do something more
    // than just print a stack trace,
```

```
        e.printStackTrace();
    }
    System.out.println("Return value from inserting batch: "
        + Arrays.toString(batchResults));
    System.out.println("Customers table contains:");

    // Print the resulting table.
    ResultSet rs = null;
    rs = stmt.executeQuery("SELECT CustID, First_Name, "
        + "Last_Name FROM customers ORDER BY CustID");
    while (rs.next()) {
        System.out.println(rs.getInt(1) + " - "
            + rs.getString(2).trim() + " "
            + rs.getString(3).trim());
    }

    // Cleanup
    conn.close();
} catch (SQLException e) {
    e.printStackTrace();
}
}
```

Running the above example prints the following on the system console:

```
Error message: [Vertica][VJDBC](100172) One or more rows were rejected by the server.Rolling back
batch insertion
Return value from inserting batch: [1, 1, -3, 1, 1]
Customers table contains:
```

The return values indicate whether each row was successfully inserted. The value 1 means the row inserted without any issues, and a -3 indicates the row failed to insert.

The customers table is empty since the batch insert was rolled back due to the error caused by the third column.

Bulk Loading Using the COPY Statement

One of the fastest ways to load large amounts of data into Vertica at once (bulk loading) is to use the [COPY statement](#). This statement loads data from a file stored on a Vertica host (or in a data stream) into a table in the database. You can pass the COPY statement parameters that define the format of the data in the file, how the data is to be transformed as it is loaded, how to handle errors, and how the data should be loaded. See the [COPY](#) documentation in the SQL Reference Manual for details.

One parameter that is particularly important is the `DIRECT` option, which tells COPY to load the data directly into ROS rather than going through the WOS. You should use this option when you are loading large files (over 100MB) into the database. Without this option, your load may

fill the WOS and overflow into ROS, requiring the [Tuple Mover](#) to perform a Moveout on the data in the WOS. It is more efficient to directly load into ROS and avoid forcing a moveout.

Only a superuser can use the COPY statement to copy a file stored on a host, so you must connect to the database using a superuser account. If you want to have a non-superuser user bulk-load data, you can use COPY to load from a stream on the host (such as STDIN) rather than a file or stream data from the client (see [Streaming Data Via JDBC](#)). You can also perform a standard [batch insert using a prepared statement](#), which uses the COPY statement in the background to load the data.

Note: When using this [COPY parameter](#) on any node, confirm that the source file is identical on all nodes. Using different files can produce inconsistent results.

The following example demonstrates using the COPY statement through the JDBC to load a file name `customers.txt` into a new database table. This file must be stored on the database host to which your application connects (in this example, a host named `VerticaHost`). Since the `customers.txt` file used in the example is very large, this example uses the `DIRECT` option to bypass WOS and load directly into ROS.

```
import java.sql.*;
import java.util.Properties;
import com.vertica.jdbc.*;

public class COPYFromFile {
    public static void main(String[] args) {
        Properties myProp = new Properties();
        myProp.put("user", "ExampleAdmin"); // Must be superuser
        myProp.put("password", "password123");
        Connection conn;
        try {
            conn = DriverManager.getConnection(
                "jdbc:vertica://VerticaHost:5433/ExampleDB",myProp);
            // Disable AutoCommit
            conn.setAutoCommit(false);
            Statement stmt = conn.createStatement();
            // Create a table to hold data.
            stmt.execute("DROP TABLE IF EXISTS customers;");
            stmt.execute("CREATE TABLE IF NOT EXISTS customers (Last_Name char(50) "
                + "NOT NULL, First_Name char(50),Email char(50), "
                + "Phone_Number char(15))");

            // Use the COPY command to load data. Load directly into ROS, since
            // this load could be over 100MB. Use ENFORCELENGTH to reject
            // strings too wide for their columns.
            boolean result = stmt.execute("COPY customers FROM "
                + "'/data/customers.txt' DIRECT ENFORCELENGTH");

            // Determine if execution returned a count value, or a full result
            // set.
            if (result) {
                System.out.println("Got result set");
            } else {
                // Count will usually return the count of rows inserted.
            }
        } catch (SQLException e) {
            e.printStackTrace();
        }
    }
}
```

```
System.out.println("Got count");
int rowCount = stmt.getUpdateCount();
System.out.println("Number of accepted rows = " + rowCount);
}

// Commit the data load
conn.commit();
} catch (SQLException e) {
System.out.print("Error: ");
System.out.println(e.toString());
}
}
}
```

The example prints the following out to the system console when run (assuming that the `customers.txt` file contained two million valid rows):

```
Number of accepted rows = 2000000
```

Streaming Data Via JDBC

There are two options to stream data from a file on the client to your Vertica database:

- Use the `VerticaCopyStream` class to stream data in an object-oriented manner - details on the class are available in the [JDBC Documentation](#)
- Execute a [COPY LOCAL](#) SQL statement to stream the data

The topics in this section explain how to use these options.

Using VerticaCopyStream

The `VerticaCopyStream` class (details on the class are available in the [JDBC Documentation](#)) lets you stream data from the client system to a Vertica database. It lets you use the SQL [COPY statement](#) directly without having to copy the data to a host in the database cluster first. Using the `COPY` command to load data from the host requires superuser privileges to be able to access the host's filesystem. The `COPY` statement used to load data from a stream does not require superuser privileges so your client can connect using any user account that has `INSERT` privileges on the table that will receive the data.

To copy streams into the database:

1. Disable the database connections AutoCommit connection parameter.
2. Instantiate a `VerticaCopyStreamObject`, passing it at least the database connection objects and a string containing a COPY statement to load the data. This statement **must** copy data from the STDIN into your table. You can use whatever parameters are appropriate for your data load.

Note: The `VerticaCopyStreamObject` constructor optionally takes a single `InputStream` object, or a `List` of `InputStream` objects. This option lets you pre-populate the list of streams to be copied into the database.

3. Call `VerticaCopyStreamObject.start()` to start the COPY statement and begin streaming the data in any streams you have already added to the `VerticaCopyStreamObject`.
4. Call `VerticaCopyStreamObject.addStream()` to add additional streams to the list of streams to send to the database. You can then call `VerticaCopyStreamObject.execute()` to stream them to the server.
5. Optionally, call `VerticaCopyStreamObject.getRejects()` to get a list of rejected rows from the last `.execute()` call. The list of rejects is reset by each call to `.execute()` or `.finish()`.

Note: If you used either the REJECTED DATA or EXCEPTIONS options in the COPY statement you passed to `VerticaCopyStreamObject` the object in step 2, `.getRejects()` returns an empty list. You can only use one method of tracking the rejected rows at a time.

6. When you are finished adding streams, call `VerticaCopyStreamObject.finish()` to send any remaining streams to the database and close the COPY statement.
7. Call `Connection.commit()` to commit the loaded data.

Getting Rejected Rows

The `VerticaCopyStreamObject.getRejects()` method returns a `List` containing the row numbers of rows that were rejected after the previous `.execute()` method call. Each call to `.execute()` clears the list of rejected rows, so you need to call `.getRejects()` after each call to `.execute()`. Since `.start()` and `.finish()` also call `.execute()` to send any pending streams to the server, you should also call `.getRejects()` after these methods as well.

The following example demonstrates loading the content of five text files stored on the client system into a table.

```
import java.io.File;
import java.io.FileInputStream;
import java.sql.Connection;
import java.sql.DriverManager;
import java.sql.Statement;
import java.util.Iterator;
import java.util.List;
import java.util.Properties;
import com.vertica.jdbc.VerticaConnection;
import com.vertica.jdbc.VerticaCopyStream;

public class CopyMultipleStreamsExample {
    public static void main(String[] args) {
        // Note: If running on Java 5, you need to call Class.forName
        // to manually load the JDBC driver.
        // Set up the properties of the connection
        Properties myProp = new Properties();
        myProp.put("user", "ExampleUser"); // Must be superuser
        myProp.put("password", "password123");
        // When performing bulk loads, you should always disable the
        // connection's AutoCommit property to ensure the loads happen as
        // efficiently as possible by reusing the same COPY command and
        // transaction.
        myProp.put("AutoCommit", "false");
        Connection conn;
        try {
            conn = DriverManager.getConnection(
                "jdbc:vertica://VerticaHost:5433/ExampleDB", myProp);
            Statement stmt = conn.createStatement();

            // Create a table to receive the data
            stmt.execute("DROP TABLE IF EXISTS customers");
            stmt.execute("CREATE TABLE customers (Last_Name char(50), "
                + "First_Name char(50),Email char(50), "
                + "Phone_Number char(15))");

            // Prepare the query to insert from a stream. This query must use
            // the COPY statement to load data from STDIN. Unlike copying from
            // a file on the host, you do not need superuser privileges to
            // copy a stream. All your user account needs is INSERT privileges
            // on the target table.
            String copyQuery = "COPY customers FROM STDIN "
```

```
+ "DELIMITER '|' DIRECT ENFORCELENGTH";

// Create an instance of the stream class. Pass in the
// connection and the query string.
VerticaCopyStream stream = new VerticaCopyStream(
    (VerticaConnection) conn, copyQuery);

// Keep running count of the number of rejects
int totalRejects = 0;

// start() starts the stream process, and opens the COPY command.
stream.start();

// If you added streams to VerticaCopyStream before calling start(),
// You should check for rejects here (see below). The start() method
// calls execute() to send any pre-queued streams to the server
// once the COPY statement has been created.

// Simple for loop to load 5 text files named customers-1.txt to
// customers-5.txt
for (int loadNum = 1; loadNum <= 5; loadNum++) {
    // Prepare the input file stream. Read from a local file.
    String filename = "C:\\Data\\customers-" + loadNum + ".txt";
    System.out.println("\n\nLoading file: " + filename);
    File inputFile = new File(filename);
    FileInputStream inputStream = new FileInputStream(inputFile);

    // Add stream to the VerticaCopyStream
    stream.addStream(inputStream);

    // call execute() to load the newly added stream. You could
    // add many streams and call execute once to load them all.
    // Which method you choose depends mainly on whether you want
    // the ability to check the number of rejections as the load
    // progresses so you can stop if the number of rejects gets too
    // high. Also, high numbers of InputStreams could create a
    // resource issue on your client system.
    stream.execute();

    // Show any rejects from this execution of the stream load
    // getRejects() returns a List containing the
    // row numbers of rejected rows.
    List<Long> rejects = stream.getRejects();

    // The size of the list gives you the number of rejected rows.
    int numRejects = rejects.size();
    totalRejects += numRejects;
    System.out.println("Number of rows rejected in load #"
        + loadNum + ": " + numRejects);

    // List all of the rows that were rejected.
    Iterator<Long> rejIt = rejects.iterator();
    long linecount = 0;
    while (rejIt.hasNext()) {
        System.out.print("Rejected row #" + ++linecount);
        System.out.println(" is row " + rejIt.next());
    }
}
// Finish closes the COPY command. It returns the number of
// rows inserted.
```

```
long results = stream.finish();
System.out.println("Finish returned " + results);

// If you added any streams that hadn't been executed(),
// you should also check for rejects here, since finish()
// calls execute() to

// You can also get the number of rows inserted using
// getRowCount().
System.out.println("Number of rows accepted: "
    + stream.getRowCount());
System.out.println("Total number of rows rejected: " + totalRejects);

// Commit the loaded data
conn.commit();

} catch (Exception e) {
    e.printStackTrace();
}
}
```

Running the above example on some sample data results in the following output:

```
Loading file: C:\Data\customers-1.txtNumber of rows rejected in load #1: 3
Rejected row #1 is row 3
Rejected row #2 is row 7
Rejected row #3 is row 51
Loading file: C:\Data\customers-2.txt
Number of rows rejected in load #2: 5Rejected row #1 is row 4143
Rejected row #2 is row 6132
Rejected row #3 is row 9998
Rejected row #4 is row 10000
Rejected row #5 is row 10050
Loading file: C:\Data\customers-3.txt
Number of rows rejected in load #3: 9
Rejected row #1 is row 14142
Rejected row #2 is row 16131
Rejected row #3 is row 19999
Rejected row #4 is row 20001
Rejected row #5 is row 20005
Rejected row #6 is row 20049
Rejected row #7 is row 20056
Rejected row #8 is row 20144
Rejected row #9 is row 20236
Loading file: C:\Data\customers-4.txt
Number of rows rejected in load #4: 8
Rejected row #1 is row 23774
Rejected row #2 is row 24141
Rejected row #3 is row 25906
Rejected row #4 is row 26130
Rejected row #5 is row 27317
Rejected row #6 is row 28121
Rejected row #7 is row 29321
Rejected row #8 is row 29998
Loading file: C:\Data\customers-5.txt
Number of rows rejected in load #5: 1
Rejected row #1 is row 39997
```

```
Finish returned 39995  
Number of rows accepted: 39995  
Total number of rows rejected: 26
```

Note: The above example shows a simple load process that targets one node in the Vertica cluster. It is more efficient to simultaneously load multiple streams to multiple database nodes. Doing so greatly improves performance because it spreads the processing for the load across the cluster.

Using COPY LOCAL with JDBC

To use COPY LOCAL with JDBC, just execute a [COPY LOCAL](#) statement with the path to the source file on the client system. This method is simpler than using the `VerticaCopyStream` class (details on the class are available in the [JDBC Documentation](#)). However, you may prefer using `VerticaCopyStream` if you have many files to copy to the database or if your data comes from a source other than a file (streamed over a network connection, for example).

The following example code demonstrates using COPY LOCAL to copy a file from the client to the database. It is the same as the code shown in [Bulk Loading Using the COPY Statement](#), except for the use of the LOCAL option in the COPY statement, and the path to the data file is on the client system, rather than on the server.

Note: The exceptions/rejections files are created on the client machine when the exceptions and rejected data modifiers are specified on the copy local command. Specify a local path and filename for these modifiers when executing a COPY LOCAL query from the driver.

```
import java.sql.*;  
import java.util.Properties;  
  
public class COPYLocal {  
    public static void main(String[] args) {  
        // Note: If using Java 5, you must call Class.forName to load the  
        // JDBC driver.  
        Properties myProp = new Properties();  
        myProp.put("user", "ExampleUser"); // Do not need to superuser  
        myProp.put("password", "password123");  
        Connection conn;  
        try {  
            conn = DriverManager.getConnection(  
                "jdbc:vertica://VerticaHost:5433/ExampleDB",myProp);  
            // Disable AutoCommit  
            conn.setAutoCommit(false);  
            Statement stmt = conn.createStatement();  
            // Create a table to hold data.  
            stmt.execute("DROP TABLE IF EXISTS customers;");  
            stmt.execute("CREATE TABLE IF NOT EXISTS customers (Last_Name char(50) "
```

```
+ "NOT NULL, First_Name char(50),Email char(50), "  
+ "Phone_Number char(15))");  
  
// Use the COPY command to load data. Load directly into ROS, since  
// this load could be over 100MB. Use ENFORCELENGTH to reject  
// strings too wide for their columns.  
boolean result = stmt.execute("COPY customers FROM LOCAL "  
    + "'C:\\Data\\customers.txt' DIRECT ENFORCELENGTH");  
  
// Determine if execution returned a count value, or a full result  
// set.  
if (result) {  
    System.out.println("Got result set");  
} else {  
    // Count will usually return the count of rows inserted.  
    System.out.println("Got count");  
    int rowCount = stmt.getUpdateCount();  
    System.out.println("Number of accepted rows = " + rowCount);  
}  
  
conn.close();  
} catch (SQLException e) {  
    System.out.print("Error: ");  
    System.out.println(e.toString());  
}  
}  
}
```

The result of running this code appears below. In this case, the customers.txt file contains 10000 rows, seven of which get rejected because they contain data too wide to fit into their database columns.

```
Got countNumber of accepted rows = 9993
```

Handling Errors

When the Vertica JDBC driver encounters an error, it throws a `SQLException` or one of its subclasses. The specific subclass it throws depends on the type of error that has occurred. Most of the JDBC method calls can result in several different types of errors, in response to which the JDBC driver throws a specific `SQLException` subclass. Your client application can choose how to react to the error based on the specific exception that the JDBC driver threw.

Note: The specific `SQLException` subclasses were introduced in the JDBC 4.0 standard. If your client application runs in a Java 5 JVM, it will use the older JDBC 3.0-compliant driver which lacks these subclasses. In that case, all errors throw a `SQLException`.

The hierarchy of `SQLException` subclasses is arranged to help your client application determine what actions it can take in response to an error condition. For example:

- The JDBC driver throws `SQLTransientException` subclasses when the cause of the error may be a temporary condition, such as a timeout error (`SQLTimeoutException`) or a connection issue (`SQLTransientConnectionIssue`). Your client application can choose to retry the operation without making any sort of attempt to remedy the error, since it may not reoccur.
- The JDBC driver throws `SQLNonTransientException` subclasses when the client needs to take some action before it could retry the operation. For example, executing a statement with a SQL syntax error results in the JDBC driver throwing the a `SQLSyntaxErrorException` (a subclass of `SQLNonTransientException`). Often, your client application just has to report these errors back to the user and have him or her resolve them. For example, if the user supplied your application with a SQL statement that triggered a `SQLSyntaxErrorException`, it could prompt the user to fix the SQL error.

See [Vertica Analytics Platform SQLState Mapping to Java Exception Classes](#) for a list Java exceptions thrown by the JDBC driver.

Vertica Analytics Platform SQLState Mapping to Java Exception Classes

SQLSTATE Class or Value	Description	Java Exception Class
Class 00	Successful Completion	SQLException
Class 01	Warning	SQLWarning
Class 02	No Data	SQLException
Class 03	SQL Statement Not Yet Complete	SQLException
Class 08	Client Connection Exception	SQLNonTransientConnectionException
Class 09	Triggered Action Exception	SQLException
Class 0A	Feature Not Supported	SQLFeatureNotSupportedException
Class 0B	Invalid Transaction Initiation	SQLException
Class 0F	Locator Exception	SQLException
Class 0L	Invalid Grantor	SQLException
Class 0P	Invalid Role Specification	SQLException
Class 21	Cardinality Violation	SQLException
Class 22	Data Exception	SQLDataException
22V21	ERRCODE_INVALID_EPOCH	SQLNonTransientException

SQLSTATE Class or Value	Description	Java Exception Class
Class 23	Integrity Constraint Violation	SQLIntegrityConstraintViolationException
Class 24	Invalid Cursor State	SQLException
Class 25	Invalid Transaction State	SQLTransactionRollbackException
Class 26	Invalid SQL Statement Name	SQLException
Class 27	Triggered Data Change Violation	SQLException
Class 28	Invalid Authorization Specification	SQLInvalidAuthorizationException
Class 2B	Dependent Privilege Descriptors Still Exist	SQLDataException
Class 2D	Invalid Transaction Termination	SQLException
Class 2F	SQL Routine Exception	SQLException
Class 34	Invalid Cursor Name	SQLException
Class 38	External Routine Exception	SQLException
Class 39	External Routine Invocation Exception	SQLException

SQLSTATE Class or Value	Description	Java Exception Class
Class 3B	Savepoint Exception	SQLException
Class 3D	Invalid Catalog Name	SQLException
Class 3F	Invalid Schema Name	SQLException
Class 40	Transaction Rollback	SQLTransactionRollbackException
Class 42	Syntax Error or Access Rule Violation	SQLSyntaxErrorException
Class 44	WITH CHECK OPTION Violation	SQLException
Class 53	Insufficient Resources	SQLTransientException
53300	ERRCODE_TOO_ MANY_ CONNECTIONS	SQLNonTransientConnectionException
Class 54	Program Limit Exceeded	SQLNonTransientException
Class 55	Object Not In Prerequisite State	SQLNonTransientException
55V03	ERRCODE_LOCK_ NOT_AVAILABLE	SQLTransactionRollbackException
Class 57	Operator Intervention	SQLTransientException
57V01	ERRCODE_ ADMIN_ SHUTDOWN	SQLNonTransientConnectionException

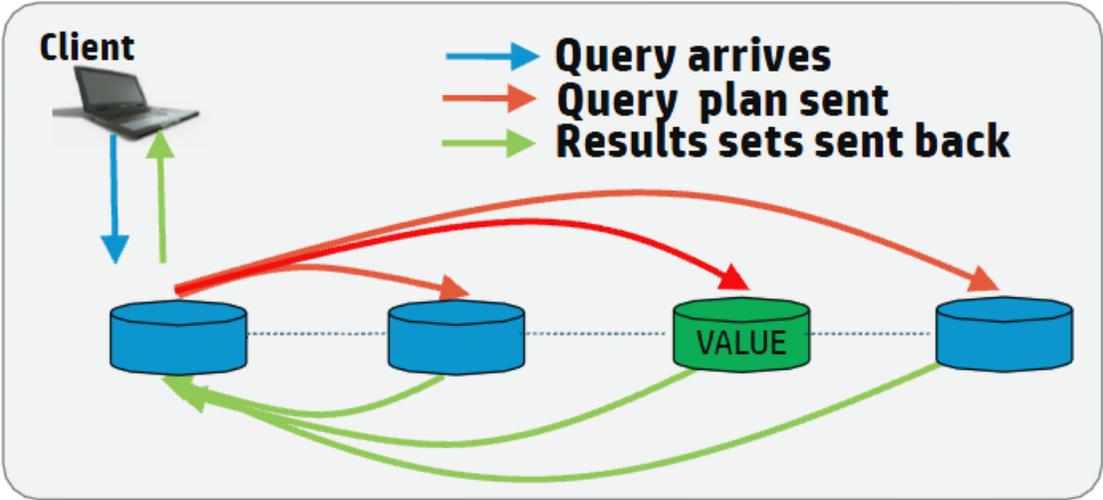

SQLSTATE Class or Value	Description	Java Exception Class
57V02	ERRCODE_CRASH_SHUTDOWN	SQLNonTransientConnectionException
57V03	ERRCODE_CANNOT_CONNECT_NOW	SQLNonTransientConnectionException
Class 58	System Error	SQLException
Class V1	Vertica-specific multi-node errors class	SQLException
Class V2	Vertica-specific miscellaneous errors class	SQLException
V2000	ERRCODE_AUTH_FAILED	SQLInvalidAuthorizationException
Class VC	Configuration File Error	SQLNonTransientException
Class VD	DB Designer errors	SQLNonTransientException
Class VP	User procedure errors	SQLNonTransientException
Class VX	Internal Error	SQLException

Routing JDBC Queries Directly to a Single Node

The JDBC driver has the ability to route queries directly to a single node using a special connection called a Routable Connection. This feature is ideal for high-volume "short" requests that return a small number of results that all exist on a single node. The common scenario for using this feature is to do high-volume lookups on data that is identified with a unique key. Routable queries typically provide lower latency and use less system resources than distributed queries. However, the data being queried must be segmented in such a way that the JDBC client can determine on which node the data resides.

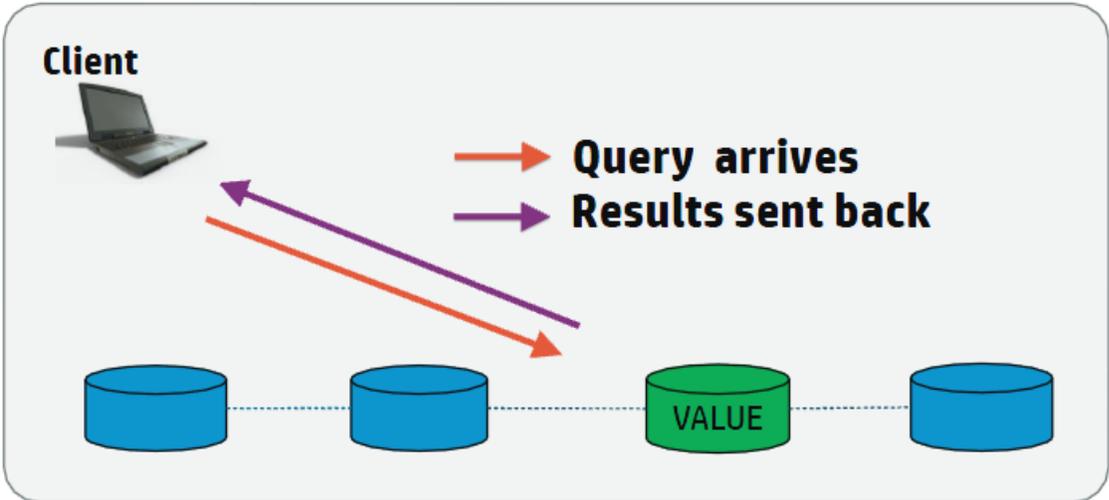

Vertica Typical Analytic Query

Typical analytic queries require dense computation on data across all nodes in the cluster and benefit from having all nodes involved in the planning and execution of the queries.

Vertica Routable Query API Query

For high-volume queries that return a single or a few rows of data, it is more efficient to execute the query on the single node that contains the data.

To effectively route a request to a single node, the client must determine the specific node on which the data resides. For the client to be able to determine the correct node, the table must be [segmented](#) by one or more columns. For example, if you segment a table on a Primary Key (PK) column, then the client can determine on which node the data resides based on the Primary Key and directly connect to that node to quickly fulfill the request.

The Routable Query API provides two classes for performing routable queries: `VerticaRoutableExecutor` and `VGet`. `VerticaRoutableExecutor` provides a more expressive SQL-based API while `VGet` provides a more structured API for programmatic access.

- The **`VerticaRoutableExecutor`** class allows you to use traditional SQL with a reduced feature set to query data on a single node. Note that the client and server must be at at least Release 7.1 SP1 to use the `VerticaRoutableExecutor`.

For joins, the table must be joined on a key column that exists in each table you are joining, and the tables must be segmented on that key. However, this is not true for unsegmented tables, which can always be joined (since all the data in an unsegmented table is available on all nodes).

- The **`VGet`** class does not use traditional SQL syntax. Instead, it uses a data structure that you build by defining predicates and predicate expressions and outputs and output expressions. This class is ideal for doing Key/Value type lookups on single tables.

The data structure used for querying the table must provide a predicate for each segmented column defined in the projection for the table. You must provide, at a minimum, a predicate with a constant value for each segmented column. For example, an `id` with a value of 12234 if the table is segmented only on the `id` column. You can also specify additional predicates for the other, non-segmented, columns in the table. Predicates act like a SQL *WHERE* clause and multiple predicates/predicate expressions apply together with a SQL AND modifier. Predicates must be defined with a constant value. Predicate expressions can be used to refine the query and can contain any arbitrary SQL expressions (such as less than, greater than, and so on) for any of the non-segmented columns in the table.

Java documentation for all classes and methods in the JDBC Driver is available in the Vertica JDBC Documentation.

Note: The JDBC Routable Query API is read-only and requires JDK 1.6 or greater.

Creating Tables and Projections for use with the Routable Query API

For routable queries, the client needs to determine the appropriate node to get the data. The client does this by comparing all of the projections available for the table and determining the best projection to use to find the single node that contains data. You must create a projection segmented by the key column(s) on at least one table to take full advantage of the Routable Query API. Other tables which join to this table must either have an unsegmented projection, or a projection segmented as described below.

Note: Tables must be segmented by hash for Routable Queries. See [Hash Segmentation Clause](#). Other segmentation types are not supported.

Creating Tables for use with Routable Queries

To create a table that can be used with the Routable Query API, segment (by hash) the table on a uniformly distributed column. Typically, you segment on a primary key. For faster lookups, sort the projection on the same columns on which you segmented. For example, to create a table that is well suited to Routable Queries:

```
CREATE TABLE users (  
  id INT NOT NULL PRIMARY KEY,  
  username VARCHAR(32),  
  email VARCHAR(64),  
  business_unit VARCHAR(16))  
ORDER BY id  
SEGMENTED BY HASH(id)  
ALL NODES;
```

This table is segmented based on the `id` column (and ordered by `id` to make lookups faster). To build a query for this table using the Routable Query API, you only need to provide a single predicate for the `id` column which returns a single row when queried.

However, if you were to add multiple columns to the segmentation clause, such as this table:

```
CREATE TABLE users2 (  
  id INT NOT NULL PRIMARY KEY,  
  username VARCHAR(32),  
  email VARCHAR(64),  
  business_unit VARCHAR(16))
```

```
ORDER BY id, business_unit  
SEGMENTED BY HASH(id, business_unit)  
ALL NODES;
```

Then you would need to provide two predicates when querying the *users2* table, since the segmentation clause uses both the *id* and the *business_unit* columns. However, if you know both *id* and *business_unit* when you perform the queries, then it is beneficial to segment on both columns, as it makes it easier for the client to determine that this projection is the best projection to use to determine the correct node.

Designing Tables for Single-node JOINS

If you plan to use the `VerticaRoutableExecutor` class and join tables during routable queries, then you must segment all tables being joined by the same segmentation key. Typically this key is a Primary/Foreign key on all the tables being joined. For example, the `customer_key` may be the primary key in a customers dimension table, and the same key is a foreign key in a sales fact table. Projections for a `VerticaRoutableExecutor` query using these tables must be segmented by hash on the customer key in each table.

If you want to join with small dimension tables, such as date dimensions, then it may be appropriate to make those tables unsegmented so that the `date_dimension` data exists on all nodes. It is important to note that when joining unsegmented tables, you still must specify a segmented table in the `createRoutableExecutor()` call.

Verifying Existing Projections for Tables

If you have existing tables that are already segmented by hash (for example, on an ID column), then you can determine what predicates are needed to query the table by using the `select get_table_projections('tableName')` command to view the projections associated with the table. The example table displays the following when `select get_table_projections('users')` is run:

```
Projection Name: [Segmented] [Seg Cols] [# of Buddies] [Buddy Projections] [Safe] [UptoDate] [Stats]  
-----  
public.users_b1 [Segmented: Yes] [Seg Cols: "public.users.id"] [K: 1] [public.users_b0] [Safe: Yes]  
[UptoDate: Yes] [Stats: RowCounts]  
public.users_b0 [Segmented: Yes] [Seg Cols: "public.users.id"] [K: 1] [public.users_b1] [Safe: Yes]  
[UptoDate: Yes] [Stats: RowCounts]
```

Note that for each projection, only the `"public.users.id"` column is specified, meaning you need to provide a predicate for this column when you build your query.

If the table was segmented on multiple columns, for example *id* and *business_unit*, then you would need to provide both columns as predicates to the routable query.

Creating a Connection for Routable Queries

The JDBC Routable Query API provides the `VerticaRoutableConnection` (details are available in the JDBC Documentation) interface to connect to a cluster and allow for Routable Queries. This interface provides advanced routing capabilities beyond those of a normal `VerticaConnection`. The `VerticaRoutableConnection` provides access to the `VerticaRoutableExecutor` and `VGet` classes. See [Defining the Query for Routable Queries using the VerticaRoutableExecutor Class](#) and [Defining the Query for Routable Queries Using the VGet Class](#) respectively.

You enable access to this class by setting the `EnableRoutableQueries` JDBC connection property to `true`.

The `VerticaRoutableConnection` maintains an internal pool of connections and a cache of table metadata that is shared by all `VerticaRoutableExecutor/VGet` objects that are produced by the connection's `createRoutableExecutor()/prepareGet()` method. It is also a fully-fledged JDBC connection on its own and supports all the functionality that a `VerticaConnection` supports. When this connection is closed, all pooled connections managed by this `VerticaRoutableConnection` and all child objects are closed too. The connection pool and metadata is only used by child Routable Query operations.

Example:

You can create the connection using a JDBC `DataSource`:

```
com.vertica.jdbc.DataSource jdbcSettings = new com.vertica.jdbc.DataSource();
jdbcSettings.setDatabase("exampleDB");
jdbcSettings.setHost("v_vmart_node0001.example.com");
jdbcSettings.setUserID("dbadmin");
jdbcSettings.setPassword("password");
jdbcSettings.setEnableRoutableQueries(true);
jdbcSettings.setPort((short) 5433);

VerticaRoutableConnection conn;
conn = (VerticaRoutableConnection)jdbcSettings.getConnection();
```

You can also create the connection using a connection string and the `DriverManager.getConnection()` method:

```
String connectionString = "jdbc:vertica://v_vmart_
node0001.example.com:5433/exampleDB?user=dbadmin&password=&EnableRoutableQueries=true";
VerticaRoutableConnection conn = (VerticaRoutableConnection) DriverManager.getConnection(connectionString);
```

Both methods result in a `conn` connection object that is identical.

Note: Avoid opening many `VerticaRoutableConnection` connections because this connection maintains its own private pool of connections which are not shared with other connections. Instead, your application should use a single connection and issue multiple queries through that connection.

In addition to the `setEnableRoutableQueries` property that the Routable Query API adds to the Vertica JDBC connection class, the API also adds additional properties. The complete list is below.

- `EnableRoutableQueries`: Enables Routable Query lookup capability. Default is false.
- `FailOnMultiNodePlans`: If the plan requires more than one node, and `FailOnMultiNodePlans` is true, then the query fails. If it is set to false then a warning is generated and the query continues. However, latency is greatly increased as the Routable Query must first determine the data is on multiple nodes, then a normal query is run using traditional (all node) execution and execution. Defaults to true. Note that this failure cannot occur on simple calls using only predicates and constant values.
- `MetadataCacheLifetime`: The time in seconds to keep projection metadata. The API caches metadata about the projection used for the query (such as projections). The cache is used on subsequent queries to reduce response time. The default is 300 seconds.
- `MaxPooledConnections`: Cluster-wide maximum number of connections to keep in the `VerticaRoutableConnection`'s internal pool. Default 20.
- `MaxPooledConnectionsPerNode`: Per-node maximum number of connections to keep in the `VerticaRoutableConnection`'s internal pool. Default 5.

Defining the Query for Routable Queries using the `VerticaRoutableExecutor` Class

The `VerticaRoutableExecutor` class is used to access table data directly from a single node. `VerticaRoutableExecutor` directly queries Vertica only on the node that has all the data needed for the query, avoiding the distributed planning and execution costs associated with a normal Vertica execution. You can use `VerticaRoutableExecutor` if you need to join tables or use a group by clause, as these operations are not possible using `VGet`.

When using the `VerticaRoutableExecutor` class, you must follow these rules:

- If joining tables, all tables being joined must be segmented (by hash) on the same set of columns referenced in the join predicate, unless the table being joined is unsegmented.

- When using multiple conditions in WHERE clauses, the WHERE clause must use AND between the conditions. Using OR in the WHERE clause causes the query to degenerate to a multi-node plan. OR, IN list, or range conditions on columns *outside* of the join condition are acceptable if the data exists on the same node.
- You can only execute a single statement per request. "Chained" SQL statements are not permitted.
- Your query may be used in a driver-generated subquery to help determine if the query can be executed on a single node. Therefore, you cannot include the semi-colon at the end of the statement and you cannot include SQL comments (using double-dashes, like so: --), as these would cause the driver-generated query to fail.

You create a `VerticaRoutableExecutor` by calling `createRoutableExecutor(schema, table)`; on a connection object. If `schema` is set to null, then the search path is used to find the table.

VerticaRoutableExecutor Methods

`VerticaRoutableExecutor` has the following methods (more details on the class are available in the JDBC Documentation):

- `execute(query string, [column, value | Map])` - Runs the query. Accepts as input the query to be executed, and either:
 - The column and value when the lookup is being done on just a single value. For example:

```
String column = "customer_key";
Integer value = 1;
ResultSet rs = q.execute(query, column, value)
```

- A Java map of the column names and corresponding values if the lookup is being done on one or more columns. For example: `ResultSet rs = q.execute(query, map);`. The table must have at least one projection segmented by a set of columns exactly matching the columns in the map. Note that each column defined in the map must have only one value. You cannot include more than one value for the same column. For example:

```
Map<String, Object> map = new HashMap<String, Object>();
    map.put("customer_key", 1);
    map.put("another_key", 42);
ResultSet rs = q.execute(query, map);
```

The query being executed uses regular SQL. The SQL used must meet the rules of the `VerticaRoutableExecutor` class. For example, you can add limits and sorts, or use aggregate functions, provided the data exists on a single node.

Important: The JDBC client uses the column/value or map arguments to determine on which node to execute the query. You must make sure that the content of the query uses the same values that you provide in the column/value or map arguments.

Note: The following data types cannot be used as column values. Additionally, if a table is segmented on any columns with the following data types then the table cannot be queried using the Routable Query API:

- interval
- timetz
- timestamptz

Note: The driver does not verify the syntax of the query before it sends the query to the server. If your expression is incorrect, then the query fails.

- `close()` - Closes this `VerticaRoutableExecutor` by releasing resources used by this `VerticaRoutableExecutor`. It does not close the parent JDBC connection to Vertica.
- `getWarnings()` - Retrieves the first warning reported by calls on this `VerticaRoutableExecutor`. Additional warnings are chained and can be accessed with the JDBC `getNextWarning()` method.

Example Query Using `VerticaRoutableExecutor`

The following example details how to use `VerticaRoutableExecutor` to execute a query using both a JOIN clause and an aggregate function with a GROUP BY clause. The example also details how to create both a customer and a sales table, and how to segment the tables so they can be joined using the `VerticaRoutableExecutor` class. This example also uses the `date_dimension` table from the `VMart` schema to illustrate how you can also join data on unsegmented tables.

1. Create a table for customer details, and then create the projections which segment on the `customer_key`.

```
CREATE TABLE customers (customer_key INT, customer_name VARCHAR(128), customer_email VARCHAR(128));

CREATE PROJECTION cust_proj_b0 AS
(SELECT *
 FROM customers) SEGMENTED BY HASH (customer_key) ALL NODES;

CREATE PROJECTION cust_proj_b1 AS
(SELECT *
 FROM customers) SEGMENTED BY HASH (customer_key) ALL NODES
OFFSET 1;

CREATE PROJECTION cust_proj_b2 AS
(SELECT *
 FROM customers) SEGMENTED BY HASH (customer_key) ALL NODES
OFFSET 2;

SELECT start_refresh();
```

2. Create a sales table, then create the projections which segment on the customer_key. Since both the customer and sales tables are segmented on the same key, you can join them with the `VerticaRoutableExecutor Routable Query` lookup.

```
CREATE TABLE sales (sale_key INT, customer_key INT, date_key INT, sales_amount FLOAT);

CREATE PROJECTION sales_proj_b0 AS
(SELECT *
 FROM sales) SEGMENTED BY HASH (customer_key) ALL NODES;

CREATE PROJECTION sales_proj_b1 AS
(SELECT *
 FROM sales) SEGMENTED BY HASH (customer_key) ALL NODES
OFFSET 1;

CREATE PROJECTION sales_proj_b2 AS
(SELECT *
 FROM sales) SEGMENTED BY HASH (customer_key) ALL NODES
OFFSET 2;

SELECT start_refresh();
```

3. Add some sample data:

```
INSERT INTO customers VALUES (1, 'Fred', 'fred@example.com');
INSERT INTO customers VALUES (2, 'Sue', 'Sue@example.com');
INSERT INTO customers VALUES (3, 'Dave', 'Dave@example.com');
INSERT INTO customers VALUES (4, 'Ann', 'Ann@example.com');
INSERT INTO customers VALUES (5, 'Jamie', 'Jamie@example.com');
COMMIT;

INSERT INTO sales VALUES(1, 1, 1, '100.00');
INSERT INTO sales VALUES(2, 2, 2, '200.00');
```

```
INSERT INTO sales VALUES(3, 3, 3, '300.00');
INSERT INTO sales VALUES(4, 4, 4, '400.00');
INSERT INTO sales VALUES(5, 5, 5, '400.00');
INSERT INTO sales VALUES(6, 1, 15, '500.00');
INSERT INTO sales VALUES(7, 1, 15, '400.00');
INSERT INTO sales VALUES(8, 1, 35, '300.00');
INSERT INTO sales VALUES(9, 1, 35, '200.00');
COMMIT;
```

4. Create an unsegmented projection of the VMart date_dimension table for use in this example. Note you must run `SELECT start_refresh();` to unsegment the existing data:

```
=> CREATE PROJECTION date_dim_unsegment AS
  (SELECT *
   FROM date_dimension) UNSEGMENTED ALL NODES;

=> SELECT start_refresh();
```

Using the customer, sales, and date_dimension data, you can now create a Routable Query lookup that uses joins and a group by to query the customers table and return the total number of purchases per day for a given customer:

```
import java.sql.*;
import java.util.HashMap;
import java.util.Map;
import com.vertica.jdbc.kv.*;

public class verticaKV_doc {
    public static void main(String[] args) {
        com.vertica.jdbc.DataSource jdbcSettings
            = new com.vertica.jdbc.DataSource();
        jdbcSettings.setDatabase("VMart");
        jdbcSettings.setHost("vertica.example.com");
        jdbcSettings.setUserID("dbadmin");
        jdbcSettings.setPassword("password");
        jdbcSettings.setEnableRoutableQueries(true);
        jdbcSettings.setFailOnMultiNodePlans(true);
        jdbcSettings.setPort((short) 5433);
        VerticaRoutableConnection conn;
        Map<String, Object> map = new HashMap<String, Object>();
        map.put("customer_key", 1);

        try {
            conn = (VerticaRoutableConnection)
                jdbcSettings.getConnection();
            String table = "customers";
            VerticaRoutableExecutor q = conn.createRoutableExecutor(null, table);
            String query = "select d.date, SUM(s.sales_amount) as Total ";
            query += " from customers as c ";
            query += " join sales as s ";
            query += " on s.customer_key = c.customer_key ";
            query += " join date_dimension as d ";
            query += " on d.date_key = s.date_key ";
        }
    }
}
```

```
        query += " where c.customer_key = " + map.get("customer_key");
        query += " group by (d.date) order by Total DESC";
        ResultSet rs = q.execute(query, map);
        while(rs.next()) {
            System.out.print("Date: " + rs.getString("date") + ": ");
            System.out.println("Amount: " + rs.getString("Total"));
        }
        conn.close();
    } catch (SQLException e) {
        e.printStackTrace();
    }
}
```

The example code outputs:

```
Date: 2012-01-15: Amount: 900.0
Date: 2012-02-04: Amount: 500.0
Date: 2012-01-01: Amount: 100.0
```

Note that your dates may be different, because the VMart schema randomly generates the dates in the date_dimension table.

Defining the Query for Routable Queries Using the VGet Class

The VGet class (details on the class are available in the JDBC Documentation) is used to access table data directly from a single node when you do not need to join the data or use a group by clause. Like VerticaRoutableExecutor, VGet directly queries Vertica nodes that have the data needed for the query, avoiding the distributed planning and execution costs associated with a normal Vertica execution. However, VGet does not use SQL. Instead, you define predicates and values to perform Key/Value type lookups on a single table. VGet is especially suited to doing key/value-type lookups on single tables.

You create a VGet by calling `prepareGet(schema, table/proj)` on a connection object. `prepareGet()` takes the name of the schema and the name of a table or projection as arguments.

VGet Methods

VGet has the following methods:

- `addPredicate(string, object)` - adds a predicate column and a constant value to the query. You must include a predicate for each column on which the table is segmented. The predicate acts as the "WHERE" clause to the query. Multiple `addPredicate()` method calls are joined by AND modifiers. Note that the VGet retains this value after each call to `execute`. To remove it, use `ClearPredicates()`.

Note: The following data types cannot be used as predicates. Additionally, if a table is segmented on any columns with the following data types then the table cannot be queried using the Routable Query API:

- interval
- timetz
- timestamptz

- `addPredicateExpression(string)` - Accepts arbitrary SQL expressions that operate on the table's columns as input to the query. Predicate expressions and predicates are joined by AND modifiers. You can use segmented columns in predicate expressions, but they must also be specified as a regular predicate with `addPredicate()`. Note that the VGet retains this value after each call to `execute`. To remove it, use `ClearPredicates()`.

Note: The driver does not verify the syntax of the expression before it sends it to the server. If your expression is incorrect then the query fails.

- `addOutputColumn(string)` - Adds a column to be included in the output. By default the query runs as `SELECT *` and you do not need to define any output columns to return the data. If you add output columns then you must add all the columns you want returned. Note that the VGet retains this value after each call to `execute`. To remove it, use `ClearOutputs()`.
- `addOutputExpression(string)` - Accepts arbitrary SQL expressions that operate on the table's columns as output. Note that the VGet retains this value after each call to `execute`. To remove it, use `ClearOutputs()`.

Note: The driver does not verify the syntax of the expression before it sends it to the server. If your expression is incorrect then the query fails.

Note: `addOutputExpression()` is not supported when querying Flex Tables. If you attempt to use `addOutputExpression()` on a Flex Table query, then a `SQLFeatureNotSupportedException` is thrown.

- `addSortColumn(string, SortOrder)` - Adds a sort order to an output column. The output column can be either the one returned by the default query (`SELECT *`) or one of the columns defined in `addOutputColumn` or `addOutputExpress`. You can defined multiple sort columns.

- `setLimit(int)` - Sets a limit on the number of results returned. A limit of 0 is unlimited.
- `clearPredicates()` - Removes predicates that were added by `addPredicate()` and `addPredicateExpression()`.
- `clearOutputs()` - Removes outputs added by `addOutput()` and `addOutputExpression()`.
- `clearSortColumns()` - Removes sort columns previously added by `addSortColumn()`.
- `execute()` - Runs the query. Care must be taken to ensure that the predicate columns exist on the table and projection used by `VGet`, and that the expressions do not require multiple nodes to execute. If an expression is sufficiently complex as to require more than one node to execute, `execute()` throws a `SQLException` if the `FailOnMultiNodePlans` connection property is true.
- `close()` - Closes this `VGet` by releasing resources used by this `VGet`. It does not close the parent JDBC connection to Vertica.
- `getWarnings()` - Retrieves the first warning reported by calls on this `VGet`. Additional warnings are chained and can be accessed with the JDBC `getNextWarning()` method.

You call the `execute()` method to run query. By default, the `VGet` fetches all the columns of all the rows that satisfy the logical AND of all the predicates passed via the `addPredicate()` method. To further customize the get operation use the `addOutputColumn()`, `addOutputExpression()`, `addPredicateExpression()`, `addSortColumn()` and `setLimit()` methods.

Note: `VGet` operations span multiple JDBC connections (and multiple Vertica sessions) and do not honor the parent connection's transaction semantics. If consistency is required across multiple executions, the parent `VerticaRoutableConnection`'s consistent read API can be used to guarantee all operations occur at the same epoch.

`VGet` is thread safe, but all methods are synchronized, so threads that share a `VGet` instance are never run in parallel. For better parallelism, each thread should have its own `VGet` instance. Different `VGet` instances that operate on the same table share pooled connections and metadata in a manner that enables a high degree of parallelism.

Example

You can query the table defined in [Creating Tables and Projections for use with the Routable Query API](#) with the following example code. The table defines an id column that is segmented by hash.

```
import java.sql.*;
import com.vertica.jdbc.kv.*;

public class verticaKV2 {
    public static void main(String[] args) {
        com.vertica.jdbc.DataSource jdbcSettings
            = new com.vertica.jdbc.DataSource();
        jdbcSettings.setDatabase("exampleDB");
        jdbcSettings.setHost("v_vmart_node0001.example.com");
        jdbcSettings.setUserID("dbadmin");
        jdbcSettings.setPassword("password");
        jdbcSettings.setEnableRoutableQueries(true);
        jdbcSettings.setPort((short) 5433);

        VerticaRoutableConnection conn;
        try {
            conn = (VerticaRoutableConnection)
                jdbcSettings.getConnection();
            System.out.println("Connected.");
            VGet get = conn.prepareGet("public", "users");
            get.addPredicate("id", 5);
            ResultSet rs = get.execute();
            rs.next();
            System.out.println("ID: " +
                rs.getString("id"));
            System.out.println("Username: "
                + rs.getString("username"));
            System.out.println("Email: "
                + rs.getString("email"));
            System.out.println("Closing Connection.");
            conn.close();
        } catch (SQLException e) {
            System.out.println("Error! Stacktrace:");
            e.printStackTrace();
        }
    }
}
```

The output:

```
Connected.
ID: 5
Username: userE
Email: usere@example.com
Closing Connection.
```

Routable Query Performance and Troubleshooting

This topic details performance considerations and common issues you might encounter when using the Routable Query API.

Using Resource Pools with Routable Queries

Individual Routable Queries are serviced quickly since they directly access a single node and return only one or a few rows of data. However, by default, Vertica resource pools use an AUTO setting for the `execution_parallelism` parameter. When set to AUTO, the setting is determined by the number of CPU cores available and generally results in multi-threaded execution of queries in the resource pool. It is not efficient to create parallel threads on the server because Routable Query operations return data so quickly and Routable Query operations only use a single thread to find a row. To prevent the server from opening unneeded processing threads, you should create a specific resource pool for Routable Query clients. Consider the following settings for the resource pool you use for Routable Queries:

- Set `execution_parallelism` to 1 to force single-threaded queries. This setting improves Routable Query performance.
- Use CPU affinity to limit the resource pool to a specific CPU or CPU set. The setting ensures that the Routable Queries have resources available to them, but it also prevents Routable Queries from significantly impacting performance on the system for other general queries.
- If you do not set a CPU affinity for the resource pool, consider setting the maximum concurrency value of the resource pool to a setting that ensures good performance for Routable Queries, but does not negatively impact the performance of general queries.

Performance Considerations for Routable Query Connections

Because a `VerticaRoutableConnection` opens an internal pool of connections, it is important to configure `MaxPooledConnections` and `MaxPooledConnectionsPerNode` appropriately for your cluster size and the amount of simultaneous client connections. It is possible to impact normal database connections if you are overloading the cluster with `VerticaRoutableConnections`.

The initial connection to the initiator node discovers all other nodes in the cluster. The internal-pool connections are not opened until a `VerticaRoutableExecutor` or `VGet` query is sent. All `VerticaRoutableExecutors/VGets` in a connection object use connections from the internal pool and are limited by the `MaxPooledConnections` settings. Connections remain open until they are closed so a new connection can be opened elsewhere if the connection limit has been reached.

Troubleshooting Routable Queries

Routable Query issues generally fall into two categories:

- Not providing enough predicates.
- Queries having to span multiple nodes.

Predicate Requirements

You must provide the same number of predicates that correspond to the columns of the table segmented by hash. To determine the segmented columns, run `select get_table_projections('tableName')`. You must provide a predicate for each column displayed in the "Seg Cols" field.

For `VGet`, this means you must literally use `addPredicate()` to add each of the columns. For `VerticaRoutableExecutor`, this means you must provide all of the predicates and values in the map sent to `execute()`.

Multi-node Failures

It is possible to define the correct number of predicates, but still have a failure because multiple nodes contain the data. This failure occurs because the projection's data is not segmented in such a way that the data being queried is contained on a single node. Enable logging for the connection and view the logs to verify the projection being used. If the client is not picking the correct projection, then try to query the projection directly by specifying the projection instead of the table in the create/prepare statement, for example:

- Using `VerticaRoutableExecutor`:

```
conn.createRoutableExecutor(schema, table/projection);
```

- Using `VGet`:

```
conn.prepareGet('schema','table/projection')
```

Additionally, you can use the [EXPLAIN](#) command in `vsql` to help determine if your query can run in single node. `EXPLAIN` can help you understand why the query is being run as single or multi-node.

Pre-Segmenting Data Using `VHash`

The `VHash` class is an implementation of the Vertica hash function for use with JDBC client applications.

Hash segmentation in Vertica allows you to segment a projection based on a built-in hash function. The built-in hash function provides even data distribution across some or all nodes in a cluster, resulting in optimal query execution.

Suppose you have several million rows of values spread across thousands of CSV files. Assume that you already have a table segmented by hash. Before you load the values into your database, you probably want to know to which node a particular value loads. For this reason, using VHash can be particularly helpful, by allowing you to pre-segment your data before loading.

The following example shows the VHash class hashing the first column of a file named "testFile.csv". The name of the first column in this file is *meterId*.

Segment the Data Using VHash

This example demonstrates how you can read the testFile.csv file from the local file system and run a hash function on the meterId column. Using the database metadata from a projection, you can then pre-segment the individual rows in the file based on the hash value of meterId.

```
import java.io.BufferedReader;
import java.io.FileNotFoundException;
import java.io.FileOutputStream;
import java.io.FileReader;
import java.io.UnsupportedEncodingException;
import java.util.*;
import java.io.IOException;
import java.sql.*;

import com.vertica.jdbc.kv.VHash;

public class VerticaKVDoc {

    final Map<String, FileOutputStream> files;
    final Map<String, List<Long>> nodeToHashList;
    String segmentationMetadata;
    List<String> lines;

    public static void main(String[] args) throws Exception {
        try {
            Class.forName("com.vertica.jdbc.Driver");
        } catch (ClassNotFoundException e) {
            System.err.println("Could not find the JDBC driver class.");
            e.printStackTrace();
            return;
        }

        Properties myProp = new Properties();
        myProp.put("user", "username");
        myProp.put("password", "password");

        VerticaKVDoc ex = new VerticaKVDoc();

        // Read in the data from a CSV file.
        ex.readLinesFromFile("C:\\testFile.csv");

        try (Connection conn = DriverManager.getConnection(
            "jdbc:vertica://VerticaHost:portNumber/databaseName", myProp)) {
```

```
// Compute the hashes and create FileOutputStreams.
ex.prepareForHashing(conn);

}

// Write to files.
ex.writeLinesToFiles();
}

public VerticaKVDoc() {
    files = new HashMap<String, FileOutputStream>();
    nodeToHashList = new HashMap<String, List<Long>>();
}

public void prepareForHashing(Connection conn) throws SQLException,
    FileNotFoundException {

    // Send a query to Vertica to return the projection segments.
    try (ResultSet rs = conn.createStatement().executeQuery(
        "SELECT get_projection_segments('public.projectionName')") {
        rs.next();
        segmentationMetadata = rs.getString(1);
    }

    // Initialize the data files.
    try (ResultSet rs = conn.createStatement().executeQuery(
        "SELECT node_name FROM nodes")) {
        while (rs.next()) {
            String node = rs.getString(1);
            files.put(node, new FileOutputStream(node + ".csv"));
        }
    }
}

public void writeLinesToFiles() throws UnsupportedEncodingException,
    IOException {
    for (String line : lines) {

        long hashedValue = VHash.hashLong(getMeterIdFromLine(line));

        // Write the row data to that node's data file.
        String node = VHash.getNodeFor(segmentationMetadata, hashedValue);

        FileOutputStream fos = files.get(node);
        fos.write(line.getBytes("UTF-8"));
    }
}

private long getMeterIdFromLine(String line) {

    // In our file, "meterId" is the name of the first column in the file.
    return Long.parseLong(line.split(",")[0]);
}

public void readLinesFromFile(String filename) throws IOException {
    lines = new ArrayList<String>();
    String line;
    try (BufferedReader reader = new BufferedReader(
        new FileReader(filename))) {
        while ((line = reader.readLine()) != null) {
```

```
        lines.add(line);  
    }  
}  
}
```

Programming ADO.NET Applications

The Vertica driver for ADO.NET allows applications written in C# to read data from, update, and load data into Vertica databases. It provides a data adapter ([Vertica Data Adapter](#)) that facilitates reading data from a database into a data set, and then writing changed data from the data set back to the database. It also provides a data reader (`VerticaDataReader`) for reading data. The driver requires the .NET framework version 3.5+.

For more information about ADO.NET, see:

- [Overview of ADO.NET](#)
- [.NET Framework Developer Guide](#)

Note: All of the examples provided in this section are in C#.

Updating ADO.NET Client Code From Previous Driver Versions

Starting in release 5.1.1, the Vertica client drivers have been updated to improve standards compliance, performance, and reliability. As a result, some Vertica-specific features and past incompatibilities have been eliminated. You must update any client code written for the prior versions of the ADO.NET driver to work with the version 5.1.1 driver and beyond.

Auto Commit Change

- All queries are now Auto Committed. The only exception is that queries run using a Transaction are not committed until the `Commit();` method is called.

Performance Improvements

- Prepared INSERT statements now run significantly faster than in previous driver versions. For the best performance, prepared statements should be executed as part of a transaction.

Namespace Change

- The namespace has changed from `vertica` to `Vertica.Data.VerticaClient`

Connection Properties

- DSN is no longer a valid connection string keyword. You cannot connect to Vertica using ADO.net with a DSN.
- The `RowBufferSize` connection property has been renamed to `ResultBufferSize`.
- Getters on the `VerticaConnection` to get various connection string options (`CacheDirectoryPooling`, `MinPoolSize`, `MaxPoolSize`, `SyncNotification`, `Timeout`, `Enlist`, `UseExtendedTypes`, `Password`, `Pooling`, `MinPoolSize`, `MaxPoolSize`) have been removed.
- There is no longer a locale connection string keyword and you cannot set the locale through the connection string. To change the locale, run the query "set locale to..."
- The connection property to enable or disable auto commit has been removed. All queries outside of transactions are auto-committed.

Result Buffering

- The driver now buffers all results, and always uses streaming. Because of this, the following functionality has changed:
 - `VerticaCommandBehavior` enum has been removed. This enum extended the ADO.NET `CommandBehavior` enum to add support for buffering results. Results are now buffered in Vertica 5.1.x.
 - The `VerticaCommand.ExecuteReader(CommandBehavior, bool)` argument has been removed.
 - `CacheDirectory` or `PreloadReader` connection string options have been removed.

Logging Changes

- Log properties are no longer configured on the connection string. Log properties are now configured through the [VerticaLogProperties](#) class.

Data Type Changes

The following data types have changed:

Old Datatype Name	New Datatype Name
<code>verticaType.Integer</code>	<code>VerticaType.BigInt</code>
<code>verticaType.Bigint</code>	<code>VerticaType.BigInt</code>
<code>verticaType.Timestamp</code>	<code>VerticaType.DateTime</code>
<code>verticaType.Interval</code>	Changed to specific type of interval, for example: <ul style="list-style-type: none">• <code>VerticaType.IntervalDay</code>• <code>VerticaType.IntervalDayToHour</code>• <code>VerticaType.IntervalDayToMinute</code>• etc.
<code>verticaType.Real</code>	<code>VerticaType.Double</code>
<code>verticaType.Text</code>	<code>VerticaType.VarChar</code>
<code>verticaType.Smallint</code>	<code>VerticaType.BigInt</code>
<code>verticaType.Varbinary</code>	<code>VerticaType.VarBinary</code>

Multiple Commands Now Supported

Multiple commands in a single statement are now supported, provided that parameters are not used in any of the commands in the statement. The exception is COPY commands. You cannot issue multiple COPY commands in the same statement.

Setting the Locale for ADO.NET Sessions

- ADO.NET applications use a UTF-16 character set encoding and are responsible for converting any non-UTF-16 encoded data to UTF-16. The same cautions as for ODBC apply if this encoding is violated.
- The ADO.NET driver converts UTF-16 data to UTF-8 when passing to the Vertica server and converts data sent by Vertica server from UTF-8 to UTF-16
- ADO.NET applications should set the correct server session locale by executing the [SET LOCALE TO](#) command in order to get expected collation and string functions behavior on the server.
- If there is no default session locale at the database level, ADO.NET applications need to set the correct server session locale by executing the [SET LOCALE TO](#) command in order to get expected collation and string functions behavior on the server. See the [SET LOCALE](#) command in the SQL Reference Manual

Connecting to the Database

This section describes:

- [Using SSL: Installing SSL Certificates on Windows](#)
- [Opening and Closing the Database Connection \(ADO.NET\)](#)
- [ADO.NET Connection Properties](#)
- [Configuring Log Properties](#)

Using SSL: Installing Certificates on Windows

You can optionally secure communication between your ADO.NET application and Vertica using SSL. The Vertica ADO.NET driver uses the default Windows key store when looking for SSL certificates. This is the same key store that Internet Explorer uses.

Before you can use SSL on the client side, you must implement SSL on the server. See [TLS/SSL Server Authentication](#) in the Administrator's Guide, perform those steps, then return to this topic to install the SSL certificate on Windows.

To use SSL for ADO.NET connections to Vertica:

- Import the server and client certificates into the Windows Key Store.
- If required by your certificates, import the public certificate of your Certifying Authority.

Import the Server and Client Certificates into the Windows Key store:

1. Copy the server.crt file you generated when you [enabled SSL](#) on the server to your Windows Machine.
2. Double-click the certificate.
3. Let Windows determine the key type, and click **Install**.

Import the Public Certificate of Your CA:

You must establish a chain of trust for the certificates. You may need to import the public certificate for your Certifying Authority (CA) (especially if it is a self-signed certificate).

1. using the same certificate as above, double-click the certificate.
2. Select **Place all certificates in the following store**.
3. Click **Browse**, select **Trusted Root Certification Authorities** and click **Next**.
4. Click **Install**.

Enable SSL in Your ADO.NET Applications

In your connection string, be sure to enable SSL by setting the SSL property in `VerticaConnectionStringBuilder` to true, for example:

```
//configure connection properties      VerticaConnectionStringBuilder builder = new
VerticaConnectionStringBuilder();
    builder.Host = "192.168.17.10";
    builder.Database = "VMart";
    builder.User = "dbadmin";
    builder.SSL = true;
    //open the connection
    VerticaConnection _conn = new VerticaConnection(builder.ToString());
    _conn.Open();
```

Opening and Closing the Database Connection (ADO.NET)

Before you can access data in Vertica through ADO.NET, you must create a connection to the database using the `VerticaConnection` class which is an implementation of `System.Data.DbConnection`. The `VerticaConnection` class takes a single argument that contains the connection properties as a string. You can manually create a string of property keywords to use as the argument, or you can use the `VerticaConnectionStringBuilder` class to build a connection string for you.

This topic details the following:

- Manually building a connection string and connecting to Vertica
- Using `VerticaConnectionStringBuilder` to create the connection string and connecting to Vertica
- Closing the connection

To Manually Create a Connection string:

See [ADO.NET Connection Properties](#) for a list of available properties to use in your connection string. At a minimum, you need to specify the Host, Database, and User.

1. For each property, provide a value and append the properties and values one after the other, separated by a semicolon. Assign this string to a variable. For example:

```
String connectString = "DATABASE=VMart;HOST=v_vmart_node0001;USER=dbadmin";
```

2. Build a Vertica connection object that specifies your connection string.

```
VerticaConnection _conn = new VerticaConnection(connectString)
```

3. Open the connection.

```
_conn.Open();
```

4. Create a command object and associate it with a connection. All `VerticaCommand` objects must be associated with a connection.

```
VerticaCommand command = _conn.CreateCommand();
```

To Use the `VerticaConnectionStringBuilder` Class to Create a Connection String and Open a connection:

1. Create a new object of the `VerticaConnectionStringBuilder` class.

```
VerticaConnectionStringBuilder builder = new VerticaConnectionStringBuilder();
```

2. Update your `VerticaConnectionStringBuilder` object with property values. See [ADO.NET Connection Properties](#) for a list of available properties to use in your connection string. At a minimum, you need to specify the Host, Database, and User.

```
builder.Host = "v_vmart_node0001";  
builder.Database = "VMart";  
builder.User = "dbadmin";
```

3. Build a Vertica connection object that specifies your connection `VerticaConnectionStringBuilder` object as a string.

```
VerticaConnection _conn = new VerticaConnection(builder.ToString());
```

4. Open the connection.

```
_conn.Open();
```

5. Create a command object and associate it with a connection. All `VerticaCommand` objects must be associated with a connection.

```
VerticaCommand command = _conn.CreateCommand;
```

Note: If your database is not in compliance with your Vertica license, the call to `VerticaConnection.open()` returns a warning message to the console and the log. See [Managing Licenses](#) in the Administrator's Guide for more information.

To Close the connection:

When you're finished with the database, close the connection. Failure to close the connection can deteriorate the performance and scalability of your application. It can also prevent other clients from obtaining locks.

```
_conn.Close();
```

Example Usage:

```
using System;
using System.Collections.Generic;
using System.Linq;
using System.Text;
using System.Data;
using Vertica.Data.VerticaClient;
namespace ConsoleApplication
{
    class Program
    {
        static void Main(string[] args)
        {
            VerticaConnectionStringBuilder builder = new VerticaConnectionStringBuilder();
            builder.Host = "192.168.1.10";
            builder.Database = "VMart";
            builder.User = "dbadmin";
            VerticaConnection _conn = new VerticaConnection(builder.ToString());
            _conn.Open();
            //Perform some operations
            _conn.Close();
        }
    }
}
```

ADO.NET Connection Properties

You use connection properties to configure the connection between your ADO.NET client application and your Vertica database. The properties provide the basic information about the connections, such as the server name and port number, needed to connect to your database.

You can set a connection property in two ways:

- Include the property name and value as part of the connection string you pass to a `VerticaConnection`.
- Set the properties in a `VerticaConnectionStringBuilder` object, and then pass the object as a string to a `VerticaConnection`.

Property	Description	Default Value
Database	Name of the Vertica database to which you want to connect. For example, if you installed the example VMart database, the database is "VMart".	none

Property	Description	Default Value
User	Name of the user to log into Vertica.	none
Port	Port on which Vertica is running.	5433
Host	<p>The host name or IP address of the server on which Vertica is running.</p> <p>You can provide an IPv4 address, IPv6 address, or host name.</p> <p>In mixed IPv4/IPv6 networks, the DNS server configuration determines which IP version address is sent first. Use the PreferredAddressFamily option to force the connection to use either IPv4 or IPv6.</p>	none
PreferredAddressFamily	<p>The IP version to use if the client and server have both IPv4 and IPv6 addresses and you have provided a host name. Valid values are:</p> <ul style="list-style-type: none"> • <code>Ipv4</code>—Connect to the server using IPv4. • <code>Ipv6</code>—Connect to the server using IPv6. • <code>None</code>—Use the IP address provided by the DNS server. 	Vertica.Data.VerticaClient.AddressFamilyP reference.None
Password	The password associated with the user connecting to the server.	string.Empty

Property	Description	Default Value
BinaryTransfer	<p>Provides a Boolean value that, when set to true, uses binary transfer instead of string transfer. When set to false, the ADO.NET connection uses string transfer. Binary transfer provides faster performance in reading data from a server to an ADO.NET client. Binary transfer also requires less bandwidth than string transfer, although it sometimes uses more when transferring a large number of small values.</p>	true
ConnSettings	<p>SQL commands to run upon connection. Uses %3B for semicolons.</p>	string.Empty
IsolationLevel	<p>Sets the transaction isolation level for Vertica. See Transactions for a description of the different transaction levels. This value is either Serializable, ReadCommitted, or Unspecified. See Setting the Transaction Isolation Level for an example of setting the isolation level using this keyword.</p> <p>Note: By default, this value is set to IsolationLevel.Unspecified, which means the connection uses the server's default transaction isolation level. Vertica's default isolation level is</p>	System.Data. IsolationLevel.Unspecified

Property	Description	Default Value
	IsolationLevel.ReadCommitted.	
Label	A string to identify the session on the server.	string
DirectBatchInsert	A Boolean value, whether to bulk insert to ROS (true) or WOS (false).	false
ResultBufferSize	The size of the buffer to use when streaming results. A value of 0 means ResultBufferSize is turned off.	8192
ConnectionTimeout	Number seconds to wait for a connection. A value of 0 means no timeout.	0
ReadOnly	A Boolean value. If true, throw an exception on write attempts.	false
Pooling	A boolean value, whether to enable connection pooling. Connection pooling is useful for server applications because it allows the server to reuse connections. This saves resources and enhances the performance of executing commands on the database. It also reduces the amount of time a user must wait to establish a connection to the database	false
MinPoolSize	An integer that defines the minimum number of connections to pool.	1

Property	Description	Default Value
	<p>Valid Values: Cannot be greater than the number of connections that the server is configured to allow. Otherwise, an exception results.</p> <p>Default: 55</p>	
MaxPoolSize	<p>An integer that defines the maximum number of connections to pool.</p> <p>Valid Values: Cannot be greater than the number of connections that the server is configured to allow. Otherwise, an exception results.</p>	20
LoadBalanceTimeout	<p>The amount of time, expressed in seconds, to timeout or remove unused pooled connections.</p> <p>Disable: Set to 0 (no timeouts)</p> <p>If you are using a cluster environment to load-balance the work, then pool is restricted to the servers in the cluster when the pool was created. If additional servers are added to the cluster, and the pool is not removed, then the new servers are never added to the connection pool unless LoadBalanceTimeout is set and exceeded or <code>VerticaConnection.Clea</code></p>	0 (no timeout)

Property	Description	Default Value
	rAllPools() is called manually from an application. If you are using load balancing, then set this property to a value that considers when new servers are added to the cluster. However, do not set it so low that pools are frequently removed and rebuilt, doing so makes pooling ineffective.	
SSL	A Boolean value, indicating whether to use SSL for the connection.	false
IntegratedSecurity	Provides a Boolean value that, when set to true, uses the user's Windows credentials for authentication, instead of user/password in the connection string.	false
KerberosServiceName	Provides the service name portion of the Vertica Kerberos principal; for example: vertica/host@EXAMPLE.COM	vertica
KerberosHostname	Provides the instance or host name portion of the Vertica Kerberos principal; for example: vertica/ host@EXAMPLE.COM	Value specified in the servername connection string property

Enabling Native Connection Load Balancing in ADO.NET

Native connection load balancing helps spread the overhead caused by client connections on the hosts in the Vertica database. Both the server and the client must enable native connection load balancing in order for it to have an effect. If both have enabled it, then when the client initially connects to a host in the database, the host picks a host to handle the client connection from a list of the currently up hosts in the database, and informs the client which host it has chosen. If the initially-contacted host did not choose itself to handle the connection, the client disconnects, then opens a second connection to the host selected by the first host. The connection process to this second host proceeds as usual—if SSL is enabled, then SSL negotiations begin, otherwise the client begins the authentication process. See [About Native Connection Load Balancing](#) in the Administrator's Guide for details.

To enable native load balancing on your client, set the `ConnectionLoadBalance` connection parameter to `true` either in the connection string or using the `ConnectionStringBuilder` (`ConnectionStringBuilder`). The following example demonstrates connecting to the database several times with native connection load balancing enabled, and fetching the name of the node handling the connection from the `V_MONITOR.CURRENT_SESSION` system table.

```
using System;
using System.Text;
using System.Data;
using Vertica.Data.VerticaClient;

namespace ConsoleApplication1
{
    class Program
    {
        static void Main(string[] args)
        {
            VerticaConnectionStringBuilder builder =
                new VerticaConnectionStringBuilder();
            builder.Host = "v_vmart_node0001.example.com";
            builder.Database = "VMart";
            builder.User = "dbadmin";
            // Enable native client load balancing in the client,
            // must also be enabled on the server!
            builder.ConnectionLoadBalance = true;
            // Connect 3 times to verify a new node is connected
            // for each connection.
            for (int i = 1; i <= 4; i++)
            {
                try
                {
                    VerticaConnection _conn =
                        new VerticaConnection(builder.ToString());
                    _conn.Open();
                    if (i == 1)
                    {
                        // On the first connection, check the server policy for load balance
```

```
        VerticaCommand sqlcom = _conn.CreateCommand();
        sqlcom.CommandText =
"SELECT LOAD_BALANCE_POLICY FROM V_CATALOG.DATABASES";
        var returnValue = sqlcom.ExecuteScalar();
        Console.WriteLine("Status of load balancy policy
on server: " + returnValue.ToString() + "\n");
    }
    VerticaCommand command = _conn.CreateCommand();
    command.CommandText =
"SELECT node_name FROM V_MONITOR.CURRENT_SESSION";
    VerticaDataReader dr = command.ExecuteReader();
    while (dr.Read())
    {
        Console.Write("Connect attempt #" + i + "... ");
        Console.WriteLine("Connected to node " + dr[0]);
    }
    dr.Close();
    _conn.Close();
    Console.WriteLine("Disconnecting.\n");
}
catch (Exception e)
{
    Console.WriteLine(e.Message);
}
}
}
}
}
```

Running the above example produces the following output:

```
Status of load balancy policy on server: roundrobin

Connect attempt #1... Connected to node v_vmart_node0001
Disconnecting.

Connect attempt #2... Connected to node v_vmart_node0002
Disconnecting.

Connect attempt #3... Connected to node v_vmart_node0003
Disconnecting.

Connect attempt #4... Connected to node v_vmart_node0001
Disconnecting.
```

ADO.NET Connection Failover

If a client application attempts to connect to a host in the Vertica Analytics Platform cluster that is down, the connection attempt fails when using the default connection configuration. This failure usually returns an error to the user. The user must either wait until the host recovers and retry the connection or manually edit the connection settings to choose another host.

Due to Vertica Analytics Platform's distributed architecture, you usually do not care which database host handles a client application's connection. You can use the client driver's connection failover feature to prevent the user from getting connection errors when the host specified in the connection settings is unreachable. It gives you two ways to let the client driver automatically attempt to connect to a different host if the one specified in the connection parameters is unreachable:

- Configure your DNS server to return multiple IP addresses for a host name. When you use this host name in the connection settings, the client attempts to connect to the first IP address from the DNS lookup. If the host at that IP address is unreachable, the client tries to connect to the second IP, and so on until it either manages to connect to a host or it runs out of IP addresses.
- Supply a list of backup hosts for the client driver to try if the primary host you specify in the connection parameters is unreachable.

For both methods, the process of failover is transparent to the client application (other than specifying the list of backup hosts, if you choose to use the list method of failover). If the primary host is unreachable, the client driver automatically tries to connect to other hosts.

Failover only applies to the initial establishment of the client connection. If the connection breaks, the driver does not automatically try to reconnect to another host in the database.

Choosing a Failover Method

You usually choose to use one of the two failover methods. However, they do work together. If your DNS server returns multiple IP addresses and you supply a list of backup hosts, the client first tries all of the IPs returned by the DNS server, then the hosts in the backup list.

Note: If a host name in the backup host list resolves to multiple IP addresses, the client does not try all of them. It just tries the first IP address in the list.

The DNS method of failover centralizes the configuration client failover. As you add new nodes to your Vertica Analytics Platform cluster, you can choose to add them to the failover list by editing the DNS server settings. All client systems that use the DNS server to connect to Vertica Analytics Platform automatically use connection failover without having to change any settings. However, this method does require administrative access to the DNS server that all clients use to connect to the Vertica Analytics Platform cluster. This may not be possible in your organization.

Using the backup server list is easier than editing the DNS server settings. However, it decentralizes the failover feature. You may need to update the application settings on each client system if you make changes to your Vertica Analytics Platform cluster.

Using DNS Failover

To use DNS failover, you need to change your DNS server's settings to map a single host name to multiple IP addresses of hosts in your Vertica Analytics Platform cluster. You then have all client applications use this host name to connect to Vertica Analytics Platform.

You can choose to have your DNS server return as many IP addresses for the host name as you want. In smaller clusters, you may choose to have it return the IP addresses of all of the hosts in your cluster. However, for larger clusters, you should consider choosing a subset of the hosts to return. Otherwise there can be a long delay as the client driver tries unsuccessfully to connect to each host in a database that is down.

Using the Backup Host List

To enable backup list-based connection failover, your client application has to specify at least one IP address or host name of a host in the `BackupServerNode` parameter. The host name or IP can optionally be followed by a colon and a port number. If not supplied, the driver defaults to the standard Vertica port number (5433). To list multiple hosts, separate them by a comma.

The following example demonstrates setting the `BackupServerNode` connection parameter to specify additional hosts for the connection attempt. The connection string intentionally has a non-existent node, so that the initial connection fails. The client driver has to resort to trying the backup hosts to establish a connection to Vertica.

```
using System;
using System.Text;
using System.Data;
using Vertica.Data.VerticaClient;

namespace ConsoleApplication1
{
    class Program
    {
        static void Main(string[] args)
        {
            VerticaConnectionStringBuilder builder =
                new VerticaConnectionStringBuilder();
            builder.Host = "not.a.real.host:5433";
            builder.Database = "VMart";
            builder.User = "dbadmin";
            builder.BackupServerNode =
                "another.broken.node:5433,v_vmart_node0002.example.com:5433";
            try
            {
                VerticaConnection _conn =
                    new VerticaConnection(builder.ToString());
                _conn.Open();
            }
        }
    }
}
```

```
VerticaCommand sqlcom = _conn.CreateCommand();
sqlcom.CommandText = "SELECT node_name FROM current_session";
var returnValue = sqlcom.ExecuteScalar();
Console.WriteLine("Connected to node: " +
    returnValue.ToString() + "\n");
_conn.Close();
Console.WriteLine("Disconnecting.\n");
}
catch (Exception e)
{
    Console.WriteLine(e.Message);
}
}
}
```

Notes

- When native connection load balancing is enabled, the additional servers specified in the BackupServerNode connection parameter are only used for the initial connection to a Vertica host. If host redirects the client to another host in the database cluster to handle its connection request, the second connection does not use the backup node list. This is rarely an issue, since native connection load balancing is aware of which nodes are currently up in the database. See [Enabling Native Connection Load Balancing in ADO.NET](#).
- Connections to a host taken from the BackupServerNode list are not pooled for ADO.NET connections.

Configuring Log Properties (ADO.Net)

Log properties for ADO.Net are configured differently than they are other client drivers. On the other client drivers, log properties can be configured as one of the connection properties. The ADO.Net driver user the VerticaLogProperties class to configure the properties.

VerticaLogProperties

VerticaLogProperties is a static class that allows you to set and get the log settings for the ADO.net driver. You can control the log level, log path, and log namespace using this class.

The log is created when the first connection is opened. Once the connection is opened, you cannot change the log path. It must be set prior to opening the connection. You can change the log level and log namespace at any time.

Setting Log Properties

Setting the log properties is done using the three methods in the `VerticaLogProperties` class. The three methods are:

- `SetLogPath(String path, bool persist)`
- `SetLogNamespace(String lognamespace, bool persist)`
- `SetLogLevel(VerticaLogLevel loglevel, bool persist)`

Each of the methods requires a boolean `persist` argument. When set to true, the `persist` argument causes the setting to be written to the client's Windows Registry, where it is used for all subsequent connections. If set to false, then the log property only applies to the current session.

SetLogPath

The `SetLogPath` method takes as its arguments a string containing the path to the log file and the `persist` argument. If the path string contains only a directory path, then the log file is created with the name `vdp-driver-MM-dd_HH.mm.ss.log` (where `MM-dd_HH.mm.ss` is the date and time the log was created). If the path ends in a filename, such as `log.txt` or `log.log`, then the log is created with that filename.

If `SetLogPath` is called with an empty string for the path argument, then the client executable's current directory is used as the log path.

If `SetLogPath` is not called and no registry entry exists for the log path, and you have called any of the other `VerticaLogProperties` methods, then the client executable's current directory is used as the log path.

When the `persist` argument is set to true, the path specified is copied to the registry verbatim. If no filename was specified, then the filename is not saved to the registry.

Note: Note: The path must exist on the client system prior to calling this method. The method does not create directories.

Example Usage:

```
//set the log path
string path = "C:\\log";
VerticaLogProperties.SetLogPath(path, false);
```

SetLogNamespace

The `SetLogNamespace` method takes as its arguments a string containing the namespace to log and the `persist` argument. The namespace string to log can be one of the following:

- `Vertica`
- `Vertica.Data.VerticaClient`
- `Vertica.Data.Internal.IO`
- `Vertica.Data.Internal.DataEngine`
- `Vertica.Data.Internal.Core`

Namespaces can be truncated to include multiple child namespaces. For example, you can specify `"Vertica.Data.Internal"` to log for all of the `Vertica.Data.Internal` namespaces.

If a log namespace is not set, and no value is stored in the registry, then the `"Vertica"` namespace is used for logging.

Example Usage:

```
//set namespace to log
string lognamespace = "Vertica.Data.VerticaClient";
VerticaLogProperties.SetLogNamespace(lognamespace, false);
```

SetLogLevel

The `SetLogLevel` method takes as its arguments a `VerticaLogLevel` type and the `persist` argument. The `VerticaLogLevel` argument can be one of:

- `VerticaLogLevel.None`
- `VerticaLogLevel.Fatal`
- `VerticaLogLevel.Error`
- `VerticaLogLevel.Warning`
- `VerticaLogLevel.Info`
- `VerticaLogLevel.Debug`
- `VerticaLogLevel.Trace`

If a log level is not set, and no value is stored in the registry, then `VerticaLogLevel.None` is used.

Example Usage:

```
//set log level
VerticaLogLevel level = VerticaLogLevel.Debug;
VerticaLogProperties.SetLogLevel(level, false);
```

Getting Log Properties

You can get the log property values using the getters included in the `VerticaLogProperties` class. The properties are:

- `LogPath`
- `LogNamespace`
- `LogLevel`

Example Usage:

```
//get current log settings
string logpath = VerticaLogProperties.LogPath;
VerticaLogLevel loglevel = VerticaLogProperties.LogLevel;
string logns = VerticaLogProperties.LogNamespace;
Console.WriteLine("Current Log Settings:");
Console.WriteLine("Log Path: " + logpath);
Console.WriteLine("Log Level: " + loglevel);
Console.WriteLine("Log Namespace: " + logns);
```

Setting and Getting Log Properties Example

This complete example shows how to set and get log properties:

```
using System;
using System.Collections.Generic;
using System.Linq;
using System.Text;
using System.Data;
using Vertica.Data.VerticaClient;
namespace ConsoleApplication
{
    class Program
    {
        static void Main(string[] args)
        {
```

```
//configure connection properties
```

```
VerticaConnectionStringBuilder builder = new VerticaConnectionStringBuilder();  
builder.Host = "192.168.1.10";  
builder.Database = "VMart";  
builder.User = "dbadmin";
```

//get current log settings

```
string logpath = VerticaLogProperties.LogPath;  
VerticaLogLevel loglevel = VerticaLogProperties.LogLevel;  
string logns = VerticaLogProperties.LogNamespace;  
Console.WriteLine("\nOld Log Settings:");  
Console.WriteLine("Log Path: " + logpath);  
Console.WriteLine("Log Level: " + loglevel);  
Console.WriteLine("Log Namespace: " + logns);
```

//set the log path

```
string path = "C:\\log";  
VerticaLogProperties.SetLogPath(path, false);
```

//set log level

```
VerticaLogLevel level = VerticaLogLevel.Debug;  
VerticaLogProperties.SetLogLevel(level, false);
```

//set namespace to log

```
string lognamespace = "Vertica";  
VerticaLogProperties.SetLogNamespace(lognamespace, false);
```

//open the connection

```
VerticaConnection _conn = new VerticaConnection(builder.ToString());  
_conn.Open();
```

//get new log settings

```
logpath = VerticaLogProperties.LogPath;  
loglevel = VerticaLogProperties.LogLevel;  
logns = VerticaLogProperties.LogNamespace;  
Console.WriteLine("\nNew Log Settings:");  
Console.WriteLine("Log Path: " + logpath);  
Console.WriteLine("Log Level: " + loglevel);  
Console.WriteLine("Log Namespace: " + logns);
```

//close the connection

```
        _conn.Close();    }  
    }  
}
```

The example produces the following output:

```
Old Log Settings:  
Log Path:  
Log Level: None  
Log Namespace:  
New Log Settings:  
Log Path: C:\log  
Log Level: Debug  
Log Namespace: Vertica
```

Querying the Database Using ADO.NET

This section describes how to create queries to do the following:

- [Inserting data into the database](#)
- [Read data from the database](#)
- [Load data into the database](#)

Note: The `ExecuteNonQuery()` method used to query the database returns an `int32` with the number of rows affected by the query. The maximum size of an `int32` type is a constant and is defined to be 2,147,483,547. If your query returns more results than the `int32` max, then ADO.NET throws an exception because of the overflow of the `int32` type. However the query is still processed by Vertica even when the reporting of the return value fails. This is a limitation in .NET, as `ExecuteNonQuery()` is part of the standard ADO.NET interface.

Inserting Data (ADO.NET)

Inserting data can be done using the `VerticaCommand` class. `VerticaCommand` is an implementation of `DbCommand`. It allows you to create and send a SQL statement to the database. Use the `CommandText` method to assign a SQL statement to the command and then execute the SQL by calling the `ExecuteNonQuery` method. The `ExecuteNonQuery` method is used for executing statements that do not return result sets.

To Insert a Single Row of data:

1. [Create a connection to the database.](#)
2. Create a command object using the connection.

```
VerticaCommand command = _conn.CreateCommand();
```

3. Insert data using an INSERT statement. The following is an example of a simple insert. Note that it does not contain a COMMIT statement because the Vertica ADO.NET driver operates in autocommit mode.

```
command.CommandText =  
    "INSERT into test values(2, 'username', 'email', 'password');"
```

4. Execute the query. The rowsAdded variable contains the number of rows added by the insert statement.

```
Int32 rowsAdded = command.ExecuteNonQuery();
```

The ExecuteNonQuery() method returns the number of rows affected by the command for UPDATE, INSERT, and DELETE statements. For all other types of statements it returns -1. If a rollback occurs then it is also set to -1.

Example Usage:

```
using System;  
using System.Collections.Generic;  
using System.Linq;  
using System.Text;  
using System.Data;  
using Vertica.Data.VerticaClient;  
namespace ConsoleApplication  
{  
    class Program  
    {  
        static void Main(string[] args)  
        {  
            VerticaConnectionStringBuilder builder = new VerticaConnectionStringBuilder();  
            builder.Host = "192.168.1.10";  
            builder.Database = "VMart";  
            builder.User = "dbadmin";  
            VerticaConnection _conn = new VerticaConnection(builder.ToString());  
            _conn.Open();  
            VerticaCommand command = _conn.CreateCommand();  
            command.CommandText =  
                "INSERT into test values(2, 'username', 'email', 'password');"  
            Int32 rowsAdded = command.ExecuteNonQuery();  
            Console.WriteLine( rowsAdded + " rows added!");  
            _conn.Close();  
        }  
    }  
}
```

Using Parameters

You can use parameters to execute similar SQL statements repeatedly and efficiently.

Using Parameters

VerticaParameters are an extension of the System.Data.DbParameter base class in ADO.NET and are used to set parameters in commands sent to the server. Use Parameters in all queries (SELECT/INSERT/UPDATE/DELETE) for which the values in the WHERE clause are not static; that is for all queries that have a known set of columns, but whose filter criteria is set dynamically by an application or end user. Using parameters in this way greatly decreases the chances of a SQL injection issue that can occur when simply creating a SQL query from a number of variables.

Parameters require that a valid DbType, VerticaDbType, or System type be assigned to the parameter. See [SQL Data Types](#) and [ADO.NET Data Types](#) for a mapping of System, Vertica, and DbTypes.

To create a parameter placeholder, place either the at sign (@) or a colon (:) character in front of the parameter name in the actual query string. Do not insert any spaces between the placeholder indicator (@ or :) and the placeholder.

Note: The @ character is the preferred way to identify parameters. The colon (:) character is supported for backward compatibility.

For example, the following typical query uses the string 'MA' as a filter.

```
SELECT customer_name, customer_address, customer_city, customer_state
FROM customer_dimension WHERE customer_state = 'MA';
```

Instead, the query can be written to use a parameter. In the following example, the string MA is replaced by the parameter placeholder @STATE.

```
SELECT customer_name, customer_address, customer_city, customer_state
FROM customer_dimension WHERE customer_state = @STATE;
```

For example, the ADO.net code for the prior example would be written as:

```
VerticaCommand command = _conn.CreateCommand();
command.CommandText = "SELECT customer_name, customer_address, customer_city, customer_state
    FROM customer_dimension WHERE customer_state = @STATE";
command.Parameters.Add(new VerticaParameter( "STATE", VerticaType.VarChar));
command.Parameters["STATE"].Value = "MA";
```

Note: Although the VerticaCommand class supports a Prepare() method, you do not need to call the Prepare() method for parameterized statements because Vertica automatically prepares the statement for you.

Creating and Rolling Back Transactions

Creating Transactions

Transactions in Vertica are atomic, consistent, isolated, and durable. When you connect to a database using the Vertica ADO.NET Driver, the connection is in autocommit mode and each individual query is committed upon execution. You can collect multiple statements into a single transaction and commit them at the same time by using a transaction. You can also choose to rollback a transaction before it is committed if your code determines that a transaction should not commit.

Transactions use the `VerticaTransaction` object, which is an implementation of `DbTransaction`. You must associate the transaction with the `VerticaCommand` object.

The following code uses an explicit transaction to insert one row each into two tables of the `VMart` schema.

To Create a Transaction in Vertica Using the ADO.NET driver:

1. [Create a connection to the database.](#)
2. Create a command object using the connection.

```
VerticaCommand command = _conn.CreateCommand();
```

3. Start an explicit transaction, and associate the command with it.

```
VerticaTransaction txn = _conn.BeginTransaction();  
command.Connection = _conn;  
command.Transaction = txn;
```

4. Execute the individual SQL statements to add rows.

```
command.CommandText =  
    "insert into product_dimension values( ... )";  
command.ExecuteNonQuery();  
command.CommandText =  
    "insert into store_orders_fact values( ... )";
```

5. Commit the transaction.

```
txn.Commit();
```

Rolling Back Transactions

If your code checks for errors, then you can catch the error and rollback the entire transaction.

```
VerticaTransaction txn = _conn.BeginTransaction();
VerticaCommand command = new
    VerticaCommand("insert into product_dimension values( 838929, 5, 'New item 5' )", _conn);
// execute the insert
command.ExecuteNonQuery();
command.CommandText = "insert into product_dimension values( 838929, 6, 'New item 6' )";
// try insert and catch any errors
bool error = false;
try
{
    command.ExecuteNonQuery();
}
catch (Exception e)
{
    Console.WriteLine(e.Message);
    error = true;
}
if (error)
{
    txn.Rollback();
    Console.WriteLine("Errors. Rolling Back.");
}
else
{
    txn.Commit();
    Console.WriteLine("Queries Successful. Committing.");
}
```

Commit and Rollback Example

This example details how you can commit or rollback queries during a transaction.

```
using System;
using System.Collections.Generic;
using System.Linq;
using System.Text;
using System.Data;
using Vertica.Data.VerticaClient;
namespace ConsoleApplication
{
    class Program
    {
        static void Main(string[] args)
        {
            VerticaConnectionStringBuilder builder = new VerticaConnectionStringBuilder();
            builder.Host = "192.168.1.10";
            builder.Database = "VMart";
            builder.User = "dbadmin";
            VerticaConnection _conn = new VerticaConnection(builder.ToString());
            _conn.Open();
            bool error = false;
            VerticaCommand command = _conn.CreateCommand();
            VerticaCommand command2 = _conn.CreateCommand();
            VerticaTransaction txn = _conn.BeginTransaction();
            command.Connection = _conn;
            command.Transaction = txn;
            command.CommandText =
                "insert into test values(1, 'test', 'test', 'test' )";
            Console.WriteLine(command.CommandText);
            try
            {
                command.ExecuteNonQuery();
            }
            catch (Exception e)
            {
                Console.WriteLine(e.Message);
                error = true;
            }
            command.CommandText =
                "insert into test values(2, 'ear', 'eye', 'nose', 'extra' )";
            Console.WriteLine(command.CommandText);
            try
            {
                command.ExecuteNonQuery();
            }
            catch (Exception e)
            {
                Console.WriteLine(e.Message);
                error = true;
            }
            if (error)
            {
                txn.Rollback();
                Console.WriteLine("Errors. Rolling Back.");
            }
        }
    }
}
```

```
        else
        {
            txn.Commit();
            Console.WriteLine("Queries Successful. Committing.");
        }
        _conn.Close();
    }
}
```

The example displays the following output on the console:

```
insert into test values(1, 'test', 'test', 'test' )
insert into test values(2, 'ear', 'eye', 'nose', 'extra' )
[42601]ERROR: INSERT has more expressions than target columns
Errors. Rolling Back.
```

- [Setting the Transaction Isolation Level](#)

Setting the Transaction Isolation Level

You can set the transaction isolation level on a per-connection and per-transaction basis. See [Transaction](#) for an overview of the transaction isolation levels supported in Vertica. To set the default transaction isolation level for a connection, use the *IsolationLevel* keyword in the `VerticaConnectionStringBuilder` string (see [Connection String Keywords](#) for details). To set the isolation level for an individual transaction, pass the isolation level to the `VerticaConnection.BeginTransaction()` method call to start the transaction.

To set the Isolation Level on a connection-basis:

1. Use the `VerticaConnectionStringBuilder` to build the connection string.
2. Provide a value for the `IsolationLevel` builder string. It can take one of two values: `IsolationLevel.ReadCommitted` (default) or `IsolationLevel.Serializable`. For example:

```
VerticaConnectionStringBuilder builder = new VerticaConnectionStringBuilder();
builder.Host = "192.168.1.100";
builder.Database = "VMart";
builder.User = "dbadmin";
builder.IsolationLevel = System.Data.IsolationLevel.Serializable
VerticaConnection _conn1 = new VerticaConnection(builder.ToString());
_conn1.Open();
```

To set the Isolation Level on a Transaction basis:

1. Set the IsolationLevel on the BeginTransaction method, for example

```
VerticaTransaction txn = _conn.BeginTransaction(IsolationLevel.Serializable);
```

Example usage:

The following example demonstrates:

- getting the connection's transaction isolation level.
- setting the connection's isolation level using connection property.
- setting the transaction isolation level for a new transaction.

```
using System;
using System.Collections.Generic;
using System.Linq;
using System.Text;
using System.Data;
Vertica.Data.VerticaClient;
namespace ConsoleApplication
{
    class Program
    {
        static void Main(string[] args)
        {
            VerticaConnectionStringBuilder builder = new VerticaConnectionStringBuilder();
            builder.Host = "192.168.1.10";
            builder.Database = "VMart";
            builder.User = "dbadmin";
            VerticaConnection _conn1 = new VerticaConnection(builder.ToString());
            _conn1.Open();
            VerticaTransaction txn1 = _conn1.BeginTransaction();
            Console.WriteLine("\n Transaction 1 Transaction Isolation Level: " +
                txn1.IsolationLevel.ToString());
            txn1.Rollback();
            VerticaTransaction txn2 = _conn1.BeginTransaction(IsolationLevel.Serializable);
            Console.WriteLine("\n Transaction 2 Transaction Isolation Level: " +
                txn2.IsolationLevel.ToString());
            txn2.Rollback();
            VerticaTransaction txn3 = _conn1.BeginTransaction(IsolationLevel.ReadCommitted);
            Console.WriteLine("\n Transaction 3 Transaction Isolation Level: " +
                txn3.IsolationLevel.ToString());
            _conn1.Close();
        }
    }
}
```

When run, the example code prints the following to the system console:

```
Transaction 1 Transaction Isolation Level: ReadCommitted
Transaction 2 Transaction Isolation Level: Serializable
Transaction 3 Transaction Isolation Level: ReadCommitted
```

Reading Data (ADO.Net)

To read data from the database use `VerticaDataReader`, an implementation of `DbDataReader`. This implementation is useful for moving large volumes of data quickly off the server where it can be run through analytic applications.

Note: A `VerticaCommand` cannot execute anything else while it has an open `VerticaDataReader` associated with it. To execute something else, close the data reader or use a different `VerticaCommand` object.

To Read Data From the Database Using `VerticaDataReader`:

1. [Create a connection to the database.](#)
2. Create a command object using the connection.

```
VerticaCommand command = _conn.CreateCommand();
```

3. Create a query. This query works with the example VMart database.

```
command.CommandText =  
"SELECT fat_content, product_description " +  
"FROM (SELECT DISTINCT fat_content, product_description" +  
"      FROM product_dimension " +  
"      WHERE department_description " + "      IN ('Dairy') " +  
"      ORDER BY fat_content) AS food " +  
"LIMIT 10;";
```

4. Execute the reader to return the results from the query. The following command calls the `ExecuteReader` method of the `VerticaCommand` object to obtain the `VerticaDataReader` object.

```
VerticaDataReader dr = command.ExecuteReader();
```

5. Read the data. The data reader returns results in a sequential stream. Therefore, you must read data from tables row-by-row. The following example uses a while loop to accomplish this:

```
Console.WriteLine("\n\n Fat Content\t Product Description");  
Console.WriteLine("-----\t -----");
```

```
int rows = 0;
while (dr.Read())
{
    Console.WriteLine("      " + dr[0] + "      \t " + dr[1]);
    ++rows;
}
Console.WriteLine("-----\n (" + rows + " rows)\n");
```

6. When you're finished, close the data reader to free up resources.

```
dr.Close();
```

Example Usage:

```
using System;
using System.Collections.Generic;
using System.Linq;
using System.Text;
using System.Data;
using Vertica.Data.VerticaClient;
namespace ConsoleApplication
{
    class Program
    {
        static void Main(string[] args)
        {
            VerticaConnectionStringBuilder builder = new VerticaConnectionStringBuilder();
            builder.Host = "192.168.1.10";
            builder.Database = "VMart";
            builder.User = "dbadmin";
            VerticaConnection _conn = new VerticaConnection(builder.ToString());
            _conn.Open();
            VerticaCommand command = _conn.CreateCommand();
            command.CommandText =
                "SELECT fat_content, product_description " +
                "FROM (SELECT DISTINCT fat_content, product_description " +
                "      FROM product_dimension " +
                "      WHERE department_description " +
                "      IN ('Dairy') " +
                "      ORDER BY fat_content) AS food " +
                "LIMIT 10;";
            VerticaDataReader dr = command.ExecuteReader();

            Console.WriteLine("\n\n Fat Content\t Product Description");
            Console.WriteLine("-----\t -----");
            int rows = 0;
            while (dr.Read())
            {
                Console.WriteLine("      " + dr[0] + "      \t " + dr[1]);
                ++rows;
            }
            Console.WriteLine("-----\n (" + rows + " rows)\n");
            dr.Close();
            _conn.Close();
        }
    }
}
```

```
}  
  }  
}
```

Loading Data Through ADO.Net

This section details the different ways that you can load data in Vertica using the ADO.NET client driver:

- [Using the Vertica Data Adapter](#)
- [Example Batch Insert Using Parameters and Transactions](#)
- [Streaming Data Via ADO.NET](#)

Using the Vertica Data Adapter

The Vertica data adapter (VerticaDataAdapter) enables a client to exchange data between a data set and a Vertica database. It is an implementation of DbDataAdapter. You can use VerticaDataAdapter to simply read data, or, for example, read data from a database into a data set, and then write changed data from the data set back to the database.

Batching Updates

When using the `Update()` method to update a dataset, you can optionally use the `UpdateBatchSize()` method prior to calling `Update()` to reduce the number of times the client communicates with the server to perform the update. The default value of `UpdateBatchSize` is 1. If you have multiple `rows.Add()` commands for a data set, then you can change the batch size to an optimal size to speed up the operations your client must perform to complete the update.

Reading Data From Vertica Using the Data adapter:

The following example details how to perform a select query on the VMart schema and load the result into a DataTable, then output the contents of the DataTable to the console.

```
using System;
using System.Collections.Generic;
using System.Linq;
using System.Text;
using System.Data;
using System.Data.SqlClient;
using Vertica.Data.VerticaClient;
namespace ConsoleApplication
{
    class Program
    {
        static void Main(string[] args)
        {
            VerticaConnectionStringBuilder builder = new VerticaConnectionStringBuilder();
            builder.Host = "192.168.1.10";
            builder.Database = "VMart";
            builder.User = "dbadmin";
            VerticaConnection _conn = new VerticaConnection(builder.ToString());
            _conn.Open();

            // Try/Catch any exceptions
            try
            {
                using (_conn)
                {
                    // Create the command
                    VerticaCommand command = _conn.CreateCommand();
                    command.CommandText = "select product_key, product_description " +
                        "from product_dimension where product_key < 10";

                    // Associate the command with the connection
                    command.Connection = _conn;

                    // Create the DataAdapter
                    VerticaDataAdapter adapter = new VerticaDataAdapter();
                    adapter.SelectCommand = command;

                    // Fill the DataTable
                    DataTable table = new DataTable();
                    adapter.Fill(table);

                    // Display each row and column value.
                    int i = 1;
                    foreach (DataRow row in table.Rows)
                    {
                        foreach (DataColumn column in table.Columns)
                        {
                            Console.Write(row[column] + "\t");
                        }
                    }
                }
            }
        }
    }
}
```

```
        }
        Console.WriteLine();
        i++;
    }
    Console.WriteLine(i + " rows returned.");
}
}
catch (Exception e)
{
    Console.WriteLine(e.Message);
}
_conn.Close();
}
}
```

Reading Data From Vertica into a DataSet and Changing data:

The following example shows how to use a data adapter to read from and insert into a dimension table of the VMart schema.

```
using System;
using System.Collections.Generic;
using System.Linq;
using System.Text;
using System.Data;
using System.Data.SqlClient;
using Vertica.Data.VerticaClient
namespace ConsoleApplication
{
    class Program
    {
        static void Main(string[] args)
        {
            VerticaConnectionStringBuilder builder = new VerticaConnectionStringBuilder();
            builder.Host = "192.168.1.10";
            builder.Database = "VMart";
            builder.User = "dbadmin";
            VerticaConnection _conn = new VerticaConnection(builder.ToString());
            _conn.Open();

            // Try/Catch any exceptions
            try
            {
                using (_conn)
                {

                    //Create a data adapter object using the connection
                    VerticaDataAdapter da = new VerticaDataAdapter();

                    //Create a select statement that retrieves data from the table
                    da.SelectCommand = new
                    VerticaCommand("select * from product_dimension where product_key < 10",
                    _conn);
                    //Set up the insert command for the data adapter, and bind variables for
                    some of the columns
                    da.InsertCommand = new
                    VerticaCommand("insert into product_dimension values( :key, :version, :desc
                    )",
                    _conn);
                    da.InsertCommand.Parameters.Add(new VerticaParameter("key", VerticaType.BigInt));
                    da.InsertCommand.Parameters.Add(new VerticaParameter("version",
                    VerticaType.BigInt));
                    da.InsertCommand.Parameters.Add(new VerticaParameter("desc",
                    VerticaType.VarChar));
                    da.InsertCommand.Parameters[0].SourceColumn = "product_key";
                    da.InsertCommand.Parameters[1].SourceColumn = "product_version";
                    da.InsertCommand.Parameters[2].SourceColumn = "product_description";
                    da.TableMappings.Add("product_key", "product_key");
```

```
da.TableMappings.Add("product_version", "product_version");
da.TableMappings.Add("product_description", "product_description");

//Create and fill a Data set for this dimension table, and get the
resulting DataTable.
DataSet ds = new DataSet();
da.Fill(ds, 0, 0, "product_dimension");
DataTable dt = ds.Tables[0];

//Bind parameters and add two rows to the table.
DataRow dr = dt.NewRow();
dr["product_key"] = 838929;
dr["product_version"] = 5;
dr["product_description"] = "New item 5";
dt.Rows.Add(dr);
dr = dt.NewRow();
dr["product_key"] = 838929;
dr["product_version"] = 6;
dr["product_description"] = "New item 6";
dt.Rows.Add(dr);
//Extract the changes for the added rows.
DataSet ds2 = ds.GetChanges();

//Send the modifications to the server.
int updateCount = da.Update(ds2, "product_dimension");

//Merge the changes into the original Data set, and mark it up to date.
ds.Merge(ds2);
ds.AcceptChanges();
Console.WriteLine(updateCount + " updates made!");
    }
}
catch (Exception e)
{
    Console.WriteLine(e.Message);
}
_conn.Close();
}
}
```

Using Batch Inserts and Prepared Statements

You can load data in batches using a prepared statement with parameters. You can also use transactions to rollback the batch load if any errors are encountered.

If you are loading large batches of data (more than 100MB), then consider using a [direct batch insert](#).

The following example details using data contained in arrays, parameters, and a transaction to batch load data.

The test table used in the example is created with the command:

```
=> CREATE TABLE test (id INT, username VARCHAR(24), email VARCHAR(64), password VARCHAR(8));
```

Example Batch Insert Using Parameters and Transactions

```
using System;
using System.Collections.Generic;
using System.Linq;
using System.Text;
using System.Data;
using Vertica.Data.VerticaClient;
namespace ConsoleApplication
{
    class Program
    {
        static void Main(string[] args)
        {
            VerticaConnectionStringBuilder builder = new VerticaConnectionStringBuilder();
            builder.Host = "192.168.1.10";
            builder.Database = "VMart";
            builder.User = "dbadmin";
            VerticaConnection _conn = new VerticaConnection(builder.ToString());
            _conn.Open();
            // Create arrays for column data
            int[] ids = {1, 2, 3, 4};
            string[] usernames = {"user1", "user2", "user3", "user4"};
            string[] emails = { "user1@example.com",
"user2@example.com","user3@example.com","user4@example.com" };
            string[] passwords = { "pass1", "pass2", "pass3", "pass4" };
            // create counters for accepted and rejected rows
            int rows = 0;
            int rejRows = 0;
            bool error = false;
            // Create the transaction
            VerticaTransaction txn = _conn.BeginTransaction();
            // Create the parameterized query and assign parameter types
            VerticaCommand command = _conn.CreateCommand();
            command.CommandText = "insert into TEST values (@id, @username, @email, @password)";
            command.Parameters.Add(new VerticaParameter("id", VerticaType.BigInt));
            command.Parameters.Add(new VerticaParameter("username", VerticaType.VarChar));
            command.Parameters.Add(new VerticaParameter("email", VerticaType.VarChar));
            command.Parameters.Add(new VerticaParameter("password", VerticaType.VarChar));
            // Prepare the statement
            command.Prepare();

            // Loop through the column arrays and insert the data
            for (int i = 0; i < ids.Length; i++) {
                command.Parameters["id"].Value = ids[i];
                command.Parameters["username"].Value = usernames[i];
                command.Parameters["email"].Value = emails[i];
                command.Parameters["password"].Value = passwords[i];
                try
                {
                    rows += command.ExecuteNonQuery();
                }
                catch (Exception e)
            }
        }
    }
}
```

```
        {
            Console.WriteLine("\nInsert failed - \n " + e.Message + "\n");
            ++rejRows;
            error = true;
        }
    }
    if (error)
    {
        // Roll back if errors
        Console.WriteLine("Errors. Rolling Back Transaction.");
        Console.WriteLine(rejRows + " rows rejected.");
        txn.Rollback();
    }
    else
    {
        // Commit if no errors
        Console.WriteLine("No Errors. Committing Transaction.");
        txn.Commit();
        Console.WriteLine("Inserted " + rows + " rows. ");
    }
    _conn.Close();
}
}
```

Loading Batches Directly into ROS

When loading large batches of data (more than 100MB or so), you should load the data directly into ROS containers. Inserting directly into ROS is more efficient for large loads than AUTO mode, since it avoids overflowing the WOS and spilling the remainder of the batch to ROS. Otherwise, the Tuple Mover has to perform a moveout on the data in the WOS, while subsequent data is directly written into ROS containers. This results in the data from your batch being segmented across containers.

When you load data using AUTO mode, Vertica inserts the data first into the WOS. If the WOS is full, Vertica inserts the data directly into ROS. For details about load options, see [Choosing a Load Method](#).

To directly load batches into ROS, set the `DirectBatchInsert` connection property to true. See [Opening and Closing the Database Connection](#) for details on all of the connection properties. When the `DirectBatchInsert` property is set to true, all batch inserts bypass the WOS and load directly into a ROS container.

Example usage:

```
using System;
using System.Collections.Generic;
using System.Linq;
using System.Text;
using System.Data;
using Vertica.Data.VerticaClient;
namespace ConsoleApplication
{
    class Program
    {
        static void Main(string[] args)
        {
            VerticaConnectionStringBuilder builder = new VerticaConnectionStringBuilder();
            builder.Host = "192.168.1.10";
            builder.Database = "VMart";
            builder.User = "dbadmin";
            builder.DirectBatchInsert = true;
            VerticaConnection _conn = new VerticaConnection(builder.ToString());
            _conn.Open();
            //Perform some operations
            _conn.Close();
        }
    }
}
```

Streaming Data Via ADO.NET

There are two options to stream data from a file on the client to your Vertica database through ADO.NET:

- Use the `VerticaCopyStream` ADO.NET class to stream data in an object-oriented manner
- Execute a `COPY LOCAL` SQL statement to stream the data

The topics in this section explain how to use these options.

Streaming From the Client Via VerticaCopyStream

The `VerticaCopyStream` class lets you stream data from the client system to a Vertica database. It lets you use the SQL [COPY statement](#) directly without having to copy the data to a host in the database cluster first by substituting one or more data stream(s) for STDIN.

Notes:

- Use Transactions and disable auto commit on the copy command for better performance.
- Disable auto commit using the copy command with the 'no commit' modifier. You must explicitly disable commits. Enabling transactions does not disable autocommit when using `VerticaCopyStream`.
- The copy command used with `VerticaCopyStream` uses copy syntax.
- `VerticaCopyStream.rejects` is zeroed every time `execute` is called. If you want to capture the number of rejects, assign the value of `VerticaCopyStream.rejects` to another variable before calling `execute` again.
- You can add multiple streams using multiple `AddStream()` calls.

Example usage:

The following example demonstrates using `VerticaCopyStream` to copy a file stream into Vertica.

```
using System;
using System.Collections.Generic;
using System.Linq;
using System.Text;
using System.Data;
using System.IO;
using Vertica.Data.VerticaClient;
namespace ConsoleApplication
{
    class Program
    {
        static void Main(string[] args)
        {
            // Configure connection properties
            VerticaConnectionStringBuilder builder = new VerticaConnectionStringBuilder();

            builder.Host = "192.168.1.10";
            builder.Database = "VMart";
            builder.User = "dbadmin";
            //open the connection
            VerticaConnection _conn = new VerticaConnection(builder.ToString());
            _conn.Open();
            try
            {
                using (_conn)
                {
                    // Start a transaction
                    VerticaTransaction txn = _conn.BeginTransaction();

                    // Create a table for this example
                    VerticaCommand command = new VerticaCommand("DROP TABLE IF EXISTS copy_
table", _conn);

                    command.ExecuteNonQuery();
                    command.CommandText = "CREATE TABLE copy_table (Last_Name char(50), "
                        + "First_Name char(50),Email char(50), "
                        + "Phone_Number char(15))";
                    command.ExecuteNonQuery();
                    // Create a new filestream from the data file
                    string filename = "C:/customers.txt";
                    Console.WriteLine("\n\nLoading File: " + filename);
                    FileStream inputfile = File.OpenRead(filename);
                    // Define the copy command
                    string copy = "copy copy_table from stdin record terminator E'\n'
delimiter '|' + " enforce length "
                        + " no commit";
                    // Create a new copy stream instance with the connection and copy statement
                    VerticaCopyStream vcs = new VerticaCopyStream(_conn, copy);

                    // Start the VerticaCopyStream process
                    vcs.Start();
                    // Add the file stream
```

```
        vcs.AddStream(inputfile, false);

        // Execute the copy
        vcs.Execute();

        // Finish stream and write out the list of inserted and rejected rows
        long rowsInserted = vcs.Finish();
        IList<long> rowsRejected = vcs.Rejects;
        // Does not work when rejected or exceptions defined
        Console.WriteLine("Number of Rows inserted: " + rowsInserted);
        Console.WriteLine("Number of Rows rejected: " + rowsRejected.Count);
        if (rowsRejected.Count > 0)
        {
            for (int i = 0; i < rowsRejected.Count; i++)
            {
                Console.WriteLine("Rejected row #{0} is row {1}", i, rowsRejected[i]);
            }
        }

        // Commit the changes
        txn.Commit();
    }
}
catch (Exception e)
{
    Console.WriteLine(e.Message);
}

//close the connection
_conn.Close();
}
}
```

Using Copy with ADO.NET

To use COPY with ADO.NET, just execute a COPY statement and the path to the source file on the client system. This method is simpler than using the VerticaCopyStream class. However, you may prefer using VerticaCopyStream if you have many files to copy to the database or if your data comes from a source other than a local file (streamed over a network connection, for example).

The following example code demonstrates using COPY to copy a file from the client to the database. It is the same as the code shown in Bulk Loading Using the COPY Statement and the path to the data file is on the client system, rather than on the server.

To load data that is stored on a database node, use a VerticaCommand object to create a COPY command:

1. [Create a connection to the database](#) through the node on which the data file is stored.
2. Create a command object using the connection.

```
VerticaCommand command = _conn.CreateCommand();
```

3. Copy data. The following is an example of using the COPY command to load data. It uses the LOCAL modifier to copy a file local to the client issuing the command.

```
command.CommandText = "copy lcopy_table from '/home/dbadmin/customers.txt'"  
+ " record terminator E'\n' delimiter '|' "  
+ " enforce length ";  
  
Int32 insertedRows = command.ExecuteNonQuery();  
Console.WriteLine(insertedRows + " inserted.");
```

Example Usage:

```
using System;
using System.Collections.Generic;
using System.Linq;
using System.Text;
using System.Data;
using System.IO;
using Vertica.Data.VerticaClient;
namespace ConsoleApplication
{
    class Program
    {
        static void Main(string[] args)
        {
            // Configure connection properties
            VerticaConnectionStringBuilder builder = new VerticaConnectionStringBuilder();
            builder.Host = "192.168.1.10";
            builder.Database = "VMart";
            builder.User = "dbadmin";

            // Open the connection
            VerticaConnection _conn = new VerticaConnection(builder.ToString());
            _conn.Open();
            try
            {
                using (_conn)
                {

                    // Start a transaction
                    VerticaTransaction txn = _conn.BeginTransaction();

                    // Create a table for this example
                    VerticaCommand command = new VerticaCommand("DROP TABLE IF EXISTS lcopy_
table", _conn);
                    command.ExecuteNonQuery();
                    command.CommandText = "CREATE TABLE IF NOT EXISTS lcopy_table (Last_Name char
(50), "
                        + "First_Name char(50),Email char(50), "
                        + "Phone_Number char(15))";
                    command.ExecuteNonQuery();
                    // Define the copy command
                    command.CommandText = "copy lcopy_table from
'/home/dbadmin/customers.txt'"
                        + " record terminator E'\n' delimiter '|' "
                        + " enforcelength "
                        + " no commit";
                    // Execute the copy
                    Int32 insertedRows = command.ExecuteNonQuery();
                    Console.WriteLine(insertedRows + " inserted.");
                    // Commit the changes
                    txn.Commit();
                }
            }
            catch (Exception e)
            {
                Console.WriteLine("Exception: " + e.Message);
            }
        }
    }
}
```

```
    }  
  
    // Close the connection  
    _conn.Close();  
  }  
}
```

Handling Messages (ADO.NET)

You can capture info and warning messages that Vertica provides to the ADO.NET driver by using the `InfoMessage` event on the `VerticaConnection` delegate class. This class captures messages that are not severe enough to force an exception to be triggered, but might still provide information that can benefit your application.

To Use the `VerticaInfoMessageEventHandler` class:

1. Create a method to handle the message sent from the even handler:

```
static void conn_InfoMessage(object sender, VerticaInfoMessageEventArgs e)  
{  
    Console.WriteLine(e.SqlState + ": " + e.Message);  
}
```

2. Create a [connection](#) and register a new `VerticaInfoMessageHandler` delegate for the `InfoMessage` event:

```
_conn.InfoMessage += new VerticaInfoMessageEventHandler(conn_InfoMessage);
```

3. Execute your queries. If a message is generated, then the event handle function is run.
4. You can unsubscribe from the event with the following command:

```
_conn.InfoMessage -= new VerticaInfoMessageEventHandler(conn_InfoMessage);
```

Example usage:

```
using System;  
using System.Collections.Generic;  
using System.Linq;
```

```
using System.Text;
using System.Data;
using Vertica.Data.VerticaClient;
namespace ConsoleApplication
{
    class Program
    {
```

// define message handler to deal with messages

```
        static void conn_InfoMessage(object sender, VerticaInfoMessageEventArgs e)
        {
            Console.WriteLine(e.SqlState + ": " + e.Message);
        }
        static void Main(string[] args)
        {
```

//configure connection properties

```
            VerticaConnectionStringBuilder builder = new VerticaConnectionStringBuilder();
            builder.Host = "192.168.1.10";
            builder.Database = "VMart";
            builder.User = "dbadmin";
```

//open the connection

```
            VerticaConnection _conn = new VerticaConnection(builder.ToString());
            _conn.Open();
```

//create message handler instance by subscribing it to the InfoMessage event of the connection

```
            _conn.InfoMessage += new VerticaInfoMessageEventHandler(conn_InfoMessage);
```

//create and execute the command

```
            VerticaCommand cmd = _conn.CreateCommand();
            cmd.CommandText = "drop table if exists fakeTable";
            cmd.ExecuteNonQuery();
```

//close the connection

```
            _conn.Close();
        }
    }
}
```

This examples displays the following when run:

```
00000: Nothing was dropped
```

Getting Table Metadata (ADO.Net)

You can get the table metadata by using the `GetSchema()` method on a connection and loading the metadata into a `DataTable`:

```
DataTable table = _conn.GetSchema("Tables", new string[] { database_name, schema_name, table_name, table_type });
```

For example:

```
DataTable table = _conn.GetSchema("Tables", new string[] { null, null, null, "SYSTEM TABLE" });
```

database_name, *schema_name*, *table_name* can be set to *null*, be a specific name, or use a LIKE pattern.

table_type can be one of:

- "SYSTEM TABLE"
- "TABLE"
- "GLOBAL TEMPORARY"
- "LOCAL TEMPORARY"
- "VIEW"
- null

If *table_type* is set to null, then the metadata for all metadata tables is returned.

Example Usage:

```
using System;
using System.Collections.Generic;
using System.Linq;
using System.Text;
using System.Data;
using Vertica.Data.VerticaClient;
namespace ConsoleApplication
{
    class Program
    {
        static void Main(string[] args)
        {
```

```
//configure connection properties
```

```
VerticaConnectionStringBuilder builder = new VerticaConnectionStringBuilder();
builder.Host = "192.168.1.10";
builder.Database = "VMart";
builder.User = "dbadmin";
```

//open the connection

```
VerticaConnection _conn = new VerticaConnection(builder.ToString());
_conn.Open();
```

//create a new data table containing the schema

```
//the last argument can be "SYSTEM TABLE", "TABLE", "GLOBAL TEMPORARY",
// "LOCAL TEMPORARY", "VIEW", or null for all types
DataTable table = _conn.GetSchema("Tables", new string[] { null, null, null, "SYSTEM
TABLE" });
```

//print out the schema

```
foreach (DataRow row in table.Rows)
{
    foreach (DataColumn col in table.Columns)
    {
        Console.WriteLine("{0} = {1}", col.ColumnName, row[col]);
    }
    Console.WriteLine("=====");
}
```

//close the connection

```
    _conn.Close();
}
}
```

ADO.NET Data Types

This table details the mapping between Vertica data type's and .NET and ADO.NET data types.

.NET Framework Type	ADO.NET DbType	VerticaType	Vertica Data Type	VerticaDataReader getter
Boolean	Boolean	Bit	Boolean	GetBoolean()
byte[]	Binary	Binary VarBinary LongVarBinar	Binary VarBinary LongVarBinar	GetBytes() Note: The limit for

.NET Framework Type	ADO.NET DbType	VerticaType	Vertica Data Type	VerticaDataReader getter
		y	y	<p>LongVarBinary is 32 Million bytes. If you attempt to insert more than the limit during a batch transfer for any one row, then they entire batch fails. Verify the size of the data before attempting to insert a LongVarBinary during a batch.</p>
Datetime	DateTime	Date Time TimeStamp	Date Time TimeStamp	<p>GetDateTime()</p> <p>Note: The Time portion of the DateTime object for vertica dates is set to DateTime.MinValue. Previously, VerticaType.DateTime was used for all date/time types. VerticaType.DateTime still exists for backwards compatibility, but now there are more specific VerticaTypes for each type.</p>
DateTimeOffset	DateTimeOffset	TimestampTZ	TimestampTZ	GetDateTimeOffset()

.NET Framework Type	ADO.NET DbType	VerticaType	Vertica Data Type	VerticaDataReader getter
		TimeTZ	TimeTZ	Note: The Date portion of the DateTime is set to DateTime.MinValue
Decimal	Decimal	Numeric	Numeric	GetDecimal()
Double	Double	Double	Double Precision	GetDouble() Note: Vertica Double type uses a default precision of 53.
Int64	Int64	BigInt	Integer	GetInt64()
TimeSpan	Object	13 Interval Types	13 Interval Types	GetInterval() Note: There are 13 VerticaType values for the 13 types of intervals. The specific VerticaType used determines the conversion rules that the driver applies. Year/Month intervals represented as 365/30 days
String	String	Varchar LongVarChar	Varchar LongVarChar	GetString()
String	StringFixedLength	Char	Char	GetString()

.NET Framework Type	ADO.NET DbType	VerticaType	Vertica Data Type	VerticaDataReader getter
Object	Object	N/A	N/A	GetValue()

Programming Python Client Applications

In order to use Python with Vertica, you must either install the Vertica Python Client (see [Python Client Documentation](#)), or install the pyodbc module and a Vertica ODBC driver on the machine where Python is installed. See [Python Prerequisites](#).

Python on Linux

Most Linux distributions come with Python preinstalled. If you want a more recent version, you can download and build it from the source code, though sometimes RPMs are also available. See the [Python Web site](#) and click an individual release for details. See also [Python documentation](#).

To determine the Python version on your Linux operating systems, type the following at a command prompt:

```
# python -V
```

The system returns the version; for example:

```
Python 3.3.4
```

Python on Windows

Python is not required to run natively on Windows operating systems, so it is not preinstalled. The ActiveState Web site distributes a free Windows installer for Python called [ActivePython](#).

If you need installation instructions for Windows, see [Using Python on Windows](#) at python.org. [Python on Windows](#) at diveintopython.org provides installation instructions for both the ActivePython and python.org packages.

Python and Unicode

When you are using Python, be sure that all of your components are using the same unicode text encoding. By default, the DSN Parameter [ColumnsAsChar](#) causes the ODBC driver to report CHAR and VARCHAR values as SQL_WCHAR. The driver returns these values to the driver manager in the encoding expected by the driver manager, as controlled by the

DriverManagerEncoding parameter in vertica.ini. Similarly, your Python application must use the encoding expected by the driver manager. If any of these components use different encodings, your output can become garbled.

The Vertica Python Client

Vertica has a native Python client you can use to communicate with your Vertica database.

Before you can connect to Vertica using Python, you need to download the Python Client. See the Vertica Python Client Documentation, for download and installation instructions.

Using pyodbc and Vertica

Before you can connect to Vertica using pyodbc, you need to download the pyodbc module, which communicates with iODBC/unixODBC driver on UNIX operating systems and the ODBC Driver Manager for Windows operating systems.

The pyodbc module is an open source , MIT-licensed Python module, letting you use ODBC to connect to almost any database from Windows, Linux, Mac OS/X, and other operating systems.

Vertica supports multiple versions of pyodbc. See [Python Prerequisites](#) for additional details.

Download the source distribution from the [pyodbc Web site](#), unpack it and build it. Note that you need the unixODBC development package (in addition to the regular build tools) to build pyodbc. For example, on RedHat/CentOS run: `yum install unixODBC-devel`, and on Ubuntu run: `sudo apt-get install unixodbc-dev`. See the [pyodbc wiki](#) for detailed instructions.

Configuring the ODBC Run-Time Environment on Linux

To configure the ODBC run-time environment on Linux:

1. Create the `odbc.ini` file if it does not already exist.
2. Add the ODBC driver directory to the `LD_LIBRARY_PATH` system environment variable:

```
export LD_LIBRARY_PATH=/path-to-vertica-odbc-driver:$LD_LIBRARY_PATH
```

Important: If you skip Step 2, the ODBC manager cannot find the driver in order to load it.

These steps are relevant only for unixODBC and iODBC. See their respective documentation for details on `odbc.ini`.

Querying the Database Using Python and pyodbc

The example session below uses `pyodbc` with the Vertica ODBC driver to connect Python to the Vertica database.

Note: `SQLFetchScroll` and `SQLFetch` functions cannot be mixed together in iODBC code. When using `pyodbc` with the iODBC driver manager, `skip` cannot be used with the `fetchall`, `fetchone`, and `fetchmany` functions.

Example Script

The following example script shows how to query Vertica using Python 3, `pyodbc`, and an ODBC DSN.

```
import pyodbc
cnxn = pyodbc.connect("DSN=VerticaDSN", ansi=True)
cursor = cnxn.cursor()
# create table
cursor.execute("CREATE TABLE TEST("
    "C_ID INT,"
    "C_FP FLOAT,"
    "C_VARCHAR VARCHAR(100),"
    "C_DATE DATE, C_TIME TIME,")
```

```
"C_TS TIMESTAMP,"
"C_BOOL BOOL)"
cursor.execute("INSERT INTO test VALUES(1,1.1,'abcdefg1234567890','1901-01-01','23:12:34','1901-01-01
09:00:09','t')")
cursor.execute("INSERT INTO test VALUES(2,3.4,'zxcasdqwe09876543','1991-11-11','00:00:01','1981-12-31
19:19:19','f')")
cursor.execute("SELECT * FROM TEST")
rows = cursor.fetchall()
for row in rows:
    print(row, end='\n')
cursor.execute("DROP TABLE TEST CASCADE")
cursor.close()
cnxn.close()
```

The resulting output displays:

```
(2, 3.4, 'zxcasdqwe09876543', datetime.date(1991, 11, 11), datetime.time(0, 0, 1), datetime.datetime
(1981, 12, 31, 19, 19, 19), False)
(1, 1.1, 'abcdefg1234567890', datetime.date(1901, 1, 1), datetime.time(23, 12, 34), datetime.datetime
(1901, 1, 1, 9, 0, 9), True)
```

Notes

`SQLPrimaryKeys` returns the table name in the primary (`pk_name`) column for unnamed primary constraints. For example:

- Unnamed primary key:

```
CREATE TABLE schema.test(c INT PRIMARY KEY);

SQLPrimaryKeys
"TABLE_CAT", "TABLE_SCHEM", "TABLE_NAME", "COLUMN_NAME", "KEY_SEQ", "PK_NAME" <Null>, "SCHEMA",
"TEST", "C", 1, "TEST"
```

- Named primary key:

```
CREATE TABLE schema.test(c INT CONSTRAINT pk_1 PRIMARY KEY);

SQLPrimaryKeys
"TABLE_CAT", "TABLE_SCHEM", "TABLE_NAME", "COLUMN_NAME", "KEY_SEQ", "PK_NAME" <Null>, "SCHEMA",
"TEST", "C", 1, "PK_1"
```

Micro Focus recommends that you name your constraints.

Programming Perl Client Applications

The Perl programming language has a Database Interface module (DBI) that creates a standard interface for Perl scripts to interact with databases. The interface module relies on Database Driver modules (DBDs) to handle all of the database-specific communication tasks. The result is an interface that provides a consistent way for Perl scripts to interact with many different types of databases.

Your Perl script can interact with Vertica using the Perl DBI module along with the DBD::ODBC database driver to interface to Vertica's ODBC driver. See the CPAN pages for Perl's [DBI](#) and [DBD::ODBC](#) modules for detailed documentation.

Important: With Perl ODBC clients, Vertica allows a forked process (a child process) to drop the parent connection to the Vertica server when the child process completes and exits. Vertica allows this behavior regardless of the setting of the Perl DBI `AutoInactiveDestroy` attribute. To change the default setting so that Vertica honors the setting of the Perl DBI `AutoInactiveDestroy` attribute, add the parameter `CleanupInForkChild` to your `vertica.ini` file, and set its value to 1. When the Perl DBI `AutoInactiveDestroy` attribute is set to 1, and the Vertica parameter `CleanupInForkChild` is set to 1, Vertica does not drop the parent connection upon child process completion.

The topics in this chapter explain how to:

- Configure Perl to access Vertica
- Connect to Vertica
- Query data stored in Vertica
- Insert data into Vertica

Perl Client Prerequisites

In order run a Perl client script that connects to Vertica, your client system must have:

- The Vertica ODBC drivers installed and configured. See [Installing the Vertica Client Drivers](#) for details.
- A Data Source Name (DSN) containing the connection parameters for your Vertica. See [Creating an ODBC Data Source Name](#). (Optionally, your Perl script can connect to Vertica without using a DSN as described in [Connecting From Perl Without a DSN](#)).
- A supported version of Perl installed
- The DBI and DBD::ODBC Perl modules (see below)

Supported Perl Versions

Vertica supports Perl versions 5.8 and 5.10. Versions later than 5.10 may also work.

Perl on Linux

Most Linux distributions come with Perl preinstalled. See your Linux distribution's documentation for details of installing and configuring its Perl package if it is not already installed.

To determine the Perl version on your Linux operating systems, type the following at a command prompt:

```
# perl -v
```

The system returns the version; for example:

```
This is perl, v5.10.0 built for x86_64-linux-thread-multi
```

Perl on Windows

Perl is not installed by default on Windows platforms. There are several different Perl packages you can download and install on your Windows system:

- [ActivePerl](#) by Activestate is a commercially-supported version of Perl for Windows platforms.
- [Strawberry Perl](#) is an open-source port of Perl for Windows.

The Perl Driver Modules (DBI and DBD::ODBC)

Before you can connect to Vertica using Perl, your Perl installation needs to have the Perl Database Interface module (DBI) and the Database Driver for ODBC (DBD::ODBC). These modules communicate with iODBC/unixODBC driver on UNIX operating systems or the ODBC Driver Manager for Windows operating systems.

Vertica supports the following Perl modules:

- DBI version 1.609 (DBI-1.609.tar.gz)
- DBD::ODBC version 1.22 (DBD-ODBC-1.22.tar.gz)

Later versions of DBI and DBD::ODBC may also work.

DBI is installed by default with many Perl installations. You can test whether it is installed by executing the following command on the Linux or Windows command line:

```
# perl -e "use DBI;"
```

If the command exits without printing anything, then DBI is installed. If it prints an error, such as:

```
Can't locate DBI.pm in @INC (@INC contains: /usr/local/lib64/perl5/usr/local/share/perl5
/usr/lib64/perl5/vendor_perl /usr/share/perl5/vendor_perl
/usr/lib64/perl5 /usr/share/perl5 .) at -e line 1.
BEGIN failed--compilation aborted at -e line 1.
```

then DBI is not installed.

Similarly, you can see if DBD::ODBC is installed by executing the command:

```
# perl -e "use DBD::ODBC;"
```

You can also run the following Perl script to determine if DBI and DBD::ODBC are installed. If they are, the script lists any available DSNs.

```
#!/usr/bin/perl
use strict;
# Attempt to load the DBI module in an eval using require. Prevents
# script from erroring out if DBI is not installed.
eval
{
    require DBI;
    DBI->import();
};
if ($?) {
    # The eval failed, so DBI must not be installed
    print "DBI module is not installed\n";
} else {
    # Eval was successful, so DBI is installed
    print "DBI Module is installed\n";
    # List the drivers that DBI knows about.
    my @drivers = DBI->available_drivers;
    print "Available Drivers: \n";
    foreach my $driver (@drivers) {
        print "\t$driver\n";
    }
    # See if DBD::ODBC is installed by searching driver array.
    if (grep {/ODBC/i} @drivers) {
        print "\nDBD::ODBC is installed.\n";
        # List the ODBC data sources (DSNs) defined on the system
        print "Defined ODBC Data Sources:\n";
        my @dsns = DBI->data_sources('ODBC');
        foreach my $dsn (@dsns) {
            print "\t$dsn\n";
        }
    } else {
        print "DBD::ODBC is not installed\n";
    }
}
}
```

The exact output of the above code will depend on the configuration of your system. The following is an example of running the code on a Windows computer:

```
DBI Module is installed
Available Drivers:
    ADO
    DBM
    ExampleP
    File
    Gofer
    ODBC
    Pg
    Proxy
    SQLite
    Sponge
    mysql
DBD::ODBC is installed.
Defined ODBC Data Sources:
    dbi:ODBC:dBASE Files
    dbi:ODBC:Excel Files
```

```
dbi:ODBC:MS Access Database  
dbi:ODBC:VerticaDSN
```

Installing Missing Perl Modules

If Perl's DBI or DBD::ODBC modules are not installed on your client system, you must install them before your Perl scripts can connect to Vertica. How you install modules depends on your Perl configuration:

- For most Perl installations, you use the `cpan` command to install modules. If the `cpan` command alias isn't installed on your system, you can try to start CPAN by using the command:

```
perl -MCPAN -e shell
```

- Some Linux distributions provide Perl modules as packages that can be installed with the system package manager (such as `yum` or `apt`). See your Linux distribution's documentation for details.
- On ActiveState Perl for Windows, you use the Perl Package Manager (PPM) program to install Perl modules. See the [Activestate's PPM documentation](#) for details.

Note: Installing Perl modules usually requires administrator or root privileges. If you do not have these permissions on your client system, you need to ask your system administrator to install these modules for you.

Connecting to Vertica Using Perl

You use the Perl DBI module's `connect` function to connect to Vertica. This function takes a required data source string argument and optional arguments for the username, password, and connection attributes.

The data source string must start with `"dbi:ODBC:"`, which tells the DBI module to use the `DBD::ODBC` driver to connect to Vertica. The remainder of the string is interpreted by the `DBD::ODBC` driver. It usually contains the name of a DSN that contains the connection information needed to connect to your Vertica database. For example, to tell the `DBD::ODBC` driver to use the DSN named `VerticaDSN`, you use the data source string:

```
"dbi:ODBC:VerticaDSN"
```

The username and password parameters are optional. However, if you do not supply them (or just the username for a passwordless account) and they are not set in the DSN, attempting to connect always fails.

The `connect` function returns a database handle if it connects to Vertica. If it does not, it returns `undef`. In that case, you can access the DBI module's error string property (`$DBI::errstr`) to get the error message.

Note: By default, the DBI module prints an error message to `STDERR` whenever it encounters an error. If you prefer to display your own error messages or handle errors in some other manner, you may want to disable these automatic messages by setting DBI's `PrintError` connection attribute to `false`. See [Setting Perl DBI Connection Attributes](#) for details. Otherwise, users may see two error messages: the one that DBI prints automatically, and the one that your script prints on its own.

The following example demonstrates connecting to Vertica using a DSN named `VerticaDSN`. The call to `connect` supplies a username and password. After connecting, it calls the database handle's `disconnect` function, which closes the connection.

```
#!/usr/bin/perl -w
use strict;
use DBI;
# Open a connection using a DSN. Supply the username and password.
my $dbh = DBI->connect("dbi:ODBC:VerticaDSN","ExampleUser","password123");
unless (defined $dbh) {
    # Connection failed.
    die "Failed to connect: $DBI::errstr";
}
print "Connected!\n";
$dbh->disconnect();
```

Setting ODBC Connection Parameters in Perl

To set ODBC connection parameters, replace the DSN name with a semicolon delimited list of parameter name and value pairs in the source data string. Use the DSN parameter to tell `DBD::ODBC` which DSN to use, then add in other the other ODBC parameters you want to set. For example, the following code connects using a DSN named `VerticaDSN` and sets the connection's locale to `en_GB`.

```
#!/usr/bin/perl -w
use strict;
use DBI;
# Instead of just using the DSN name, use name and value pairs.
my $dbh = DBI->connect("dbi:ODBC:DSN=VerticaDSN;Locale=en_
GB@collation=binary","ExampleUser","password123");
unless (defined $dbh) {
    # Connection failed.
```

```
    die "Failed to connect: $DBI::errstr";  
}  
print "Connected!\n";  
$dbh->disconnect();
```

See [Data Source Name \(DSN\) Connection Properties](#) for a list of the connection parameters you can set in the source data string.

Setting Perl DBI Connection Attributes

The Perl DBI module has attributes that you can use to control the behavior of its database connection. These attributes are similar to the ODBC connection parameters (in several cases, they duplicate each other's functionality). The DBI connection attributes are a cross-platform way of controlling the behavior of the database connection.

You can set the DBI connection attributes when establishing a connection by passing the DBI connect function a hash containing attribute and value pairs. For example, to set the DBI connection attribute `AutoCommit` to false, you would use:

```
# Create a hash that holds attributes for the connection  
my $attr = {AutoCommit => 0};  
# Open a connection using a DSN. Supply the username and password.  
my $dbh = DBI->connect("dbi:ODBC:VerticaDSN","ExampleUser","password123",  
    $attr);
```

See the DBI documentation's [Database Handle Attributes](#) section for a full description of the attributes you can set on the database connection.

After your script has connected, it can access and modify the connection attributes through the database handle by using it as a hash reference. For example:

```
print "The AutoCommit attribute is: " . $dbh->{AutoCommit} . "\n";
```

The following example demonstrates setting two connection attributes:

- `RaiseError` controls whether the DBI driver generates a Perl error if it encounters a database error. Usually, you set this to true (1) if you want your Perl script to exit if there is a database error.
- `AutoCommit` controls whether statements automatically commit their transactions when they complete. DBI defaults to Vertica's default `AutoCommit` value of true. Always set `AutoCommit` to false (0) when bulk loading data to increase database efficiency.

```
#!/usr/bin/perl  
use strict;  
use DBI;
```

```
# Create a hash that holds attributes for the connection
my $attr = {
    RaiseError => 1, # Make database errors fatal to script
    AutoCommit => 0, # Prevent statements from committing
                    # their transactions.
};
# Open a connection using a DSN. Supply the username and password.
my $dbh = DBI->connect("dbi:ODBC:VerticaDSN","ExampleUser","password123",
    $attr);

if (defined $dbh->err) {
    # Connection failed.
    die "Failed to connect: $DBI::errstr";
}
print "Connected!\n";
# The database handle lets you access the connection attributes directly:
print "The AutoCommit attribute is: " . $dbh->{AutoCommit} . "\n";
print "The RaiseError attribute is: " . $dbh->{RaiseError} . "\n";
# And you can change values, too...
$dbh->{AutoCommit} = 1;
print "The AutoCommit attribute is now: " . $dbh->{AutoCommit} . "\n";
$dbh->disconnect();
```

The example outputs the following when run:

```
Connected!The AutoCommit attribute is: 0
The RaiseError attribute is: 1
The AutoCommit attribute is now: 1
```

Connecting From Perl Without a DSN

If you do not want to set up a Data Source Name (DSN) for your database, you can supply all of the information Perl's DBD::ODBC driver requires to connect to your Vertica database in the data source string. This source string must the DRIVER= parameter that tells DBD::ODBC which driver library to use in order to connect. The value for this parameter is the name assigned to the driver by the client system's driver manager:

- On Windows, the name assigned to the Vertica ODBC driver by the driver manager is Vertica.
- On Linux and other UNIX-like operating systems, the Vertica ODBC driver's name is assigned in the system's `odbcinst.ini` file. For example, if your `/etc/odbcint.ini` contains the following:

```
[Vertica]
Description = Vertica ODBC Driver
Driver = /opt/vertica/lib64/libverticaodbc.so
```

you would use the name Vertica. See [Creating an ODBC DSN for Linux, Solaris, AIX, and HP-UX](#) for more information about the `odbcinst.ini` file.

You can take advantage of Perl's variable expansion within strings to use variables for most of the connection properties as the following example demonstrates.

```
#!/usr/bin/perl
use strict;
use DBI;
my $server='VerticaHost';
my $port = '5433';
my $database = 'VMart';
my $user = 'ExampleUser';
my $password = 'password123';
# Connect without a DSN by supplying all of the information for the connection.
# The DRIVER value on UNIX platforms depends on the entry in the odbcinst.ini
# file.
my $dbh = DBI->connect("dbi:ODBC:DRIVER={Vertica};Server=$server;" .
    "Port=$port;Database=$database;UID=$user;PWD=$password")
    or die "Could not connect to database: " . DBI::errstr;
print "Connected!\n";
$dbh->disconnect();
```

Note: Surrounding the driver name with braces (`{` and `}`) in the source string is optional.

Executing Statements Using Perl

Once your Perl script has connected to Vertica (see [Connecting to Vertica Using Perl](#)), it can execute simple statements that return a value rather than a result set by using the Perl DBI module's `do` function. You usually use this function to execute DDL statements or data loading statements such as `COPY` (see [Using COPY LOCAL to Load Data in Perl](#)).

```
#!/usr/bin/perl
use strict;
use DBI;
# Disable autocommit
my $attr = {AutoCommit => 0};
# Open a connection using a DSN.
my $dbh = DBI->connect("dbi:ODBC:VerticaDSN","ExampleUser","password123",
    $attr);
unless (defined $dbh) {
    # Connection failed.
    die "Failed to connect: $DBI::errstr";
}
# You can use the do function to perform DDL commands.
# Drop any existing table.
$dbh->do("DROP TABLE IF EXISTS TEST CASCADE;");
# Create a table to hold data.
$dbh->do("CREATE TABLE TEST( \
    C_ID INT, \
```

```
C_FP FLOAT,\
C_VARCHAR VARCHAR(100),\
C_DATE DATE, C_TIME TIME,\
C_TS TIMESTAMP,\
C_BOOL BOOL)");
# Commit changes and exit.
$dbh->commit();
$dbh->disconnect();
```

Note: The `do` function returns the number of rows that were affected by the statement (or -1 if the count of rows doesn't apply or is unavailable). Usually, the only time you need to consult this value is after you deleted a number of rows or if you used a bulk load command such as [COPY](#). You use other DBI functions instead of `do` to perform batch inserts and selects (see [Batch Loading Data Using Perl](#) and [Querying Using Perl](#) for details).

Batch Loading Data Using Perl

To load large batches of data into Vertica using Perl:

1. Set DBI's `AutoCommit` connection attribute to false to improve the batch load speed. See [Setting Perl DBI Connection Attributes](#) for an example of disabling `AutoCommit`.
2. Call the database handle's `prepare` function to prepare a SQL [INSERT](#) statement that contains placeholders for the data values you want to insert. For example:

```
# Prepare an INSERT statement for the test table
$stmt = $dbh->prepare("INSERT into test values(?,?,?,?);");
```

The `prepare` function returns a statement handle that you will use to insert the data.

3. Assign data to the placeholders. There are several ways to do this. The easiest is to populate an array with a value for each placeholder in your `INSERT` statement.
4. Call the statement handle's `execute` function to insert a row of data into Vertica. The return value of this function call lets you know whether Vertica accepted or rejected the row.
5. Repeat steps 3 and 4 until you have loaded all of the data you need to load.
6. Call the database handle's `commit` function to commit the data you inserted.

The following example demonstrates inserting a small batch of data by populating an array of arrays with data, then looping through it and inserting each row.

```
#!/usr/bin/perl
use strict;
use DBI;
# Create a hash reference that holds a hash of parameters for the
# connection.
my $attr = {AutoCommit => 0, # Turn off autocommit
            PrintError => 0 # Turn off automatic error printing.
            # This is handled manually.
            };
# Open a connection using a DSN. Supply the username and password.
my $dbh = DBI->connect("dbi:ODBC:VerticaDSN","ExampleUser","password123",
    $attr);
if (defined DBI::err) {
    # Connection failed.
    die "Failed to connect: $DBI::errstr";
}
print "Connection AutoCommit state is: " . $dbh->{AutoCommit} . "\n";
# Create table to hold inserted data
$dbh->do("DROP TABLE IF EXISTS TEST CASCADE;") or die "Could not drop table";
$dbh->do("CREATE TABLE TEST( \
    C_ID INT, \
    C_FP FLOAT,\
    C_VARCHAR VARCHAR(100),\
    C_DATE DATE, C_TIME TIME,\
    C_TS TIMESTAMP,\
    C_BOOL BOOL)") or die "Could not create table";
# Populate an array of arrays with values. One of these rows contains
# data that will not be successfully inserted. Another contains an
# undef value, which gets inserted into the database as a NULL.
my @data = (
    [1,1.111,'Hello World!','2001-01-01','01:01:01'
     , '2001-01-01 01:01:01','t'],
    [2,2.22222,'How are you?','2002-02-02','02:02:02'
     , '2002-02-02 02:02:02','f'],
    ['bad value',2.22222,'How are you?','2002-02-02','02:02:02'
     , '2002-02-02 02:02:02','f'],
    [4,4.22222,undef,'2002-02-02','02:02:02'
     , '2002-02-02 02:02:02','f'],
    );
# Create a prepared statement to use parameters for inserting values.
my $sth = $dbh->prepare_cached("INSERT into test values(?,?,?,?,?)");
my $rowcount = 0; # Count # of rows
# Loop through the arrays to insert values
foreach my $tuple (@data) {
    $rowcount++;
    # Insert the row
    my $retval = $sth->execute(@$tuple);

    # See if the row was successfully inserted.
    if ($retval == 1) {
        # Value of 1 means the row was inserted (1 row was affected by insert)
        print "Row $rowcount successfully inserted\n";
    } else {
        print "Inserting row $rowcount failed";
        # Error message is not set on some platforms/versions of DBUI. Check to
        # ensure a message exists to avoid getting an uninitialized var warning.
        if ($sth->err()) {
            print ": " . $sth->errstr();
        }
        print "\n";
    }
}
```

```
    }  
  }  
  # Commit changes. With AutoCommit off, you need to use commit for batched  
  # data to actually be committed into the database. If your Perl script exits  
  # without committing its data, Vertica rolls back the transaction and the  
  # data is not committed.  
  $dbh->commit();  
  $dbh->disconnect();
```

The previous example displays the following when successfully run:

```
Connection AutoCommit state is: 0  
Row 1 successfully inserted  
Row 2 successfully inserted  
Inserting row 3 failed with error 01000 [Vertica][VerticaDSII] (20) An  
error occurred during query execution: Row rejected by server; see  
server log for details (SQL-01000)  
Row 4 successfully inserted
```

Note that one of the rows was not inserted because it contained a string value that could not be stored in an integer column. See [Conversions Between Perl and Vertica Data Types](#) for details of data type handling in Perl scripts that communicate with Vertica.

Using COPY LOCAL to Load Data in Perl

If you have delimited files (for example, a file with comma-separated values) on your client system that you want to load into Vertica, you can use the [COPY LOCAL](#) statement to directly load the file's contents into Vertica instead of using Perl to read, parse, and then batch insert the data. You execute a COPY LOCAL statement to load the file from the local filesystem. The result of executing the statement is the number of rows that were successfully inserted.

The following example code demonstrates loading a file named data.txt and located in the same directory as the Perl file into Vertica using a COPY LOCAL statement.

```
#!/usr/bin/perl  
use strict;  
use DBI;  
# Filesystem path handling module  
use File::Spec;  
# Create a hash reference that holds a hash of parameters for the  
# connection.  
my $attr = {AutoCommit => 0}; # Turn off AutoCommit  
# Open a connection using a DSN. Supply the username and password.  
my $dbh = DBI->connect("dbi:ODBC:VerticaDSN","ExampleUser","password123",  
    $attr) or die "Failed to connect: $DBI::errstr";  
print "Connected!\n";  
# Drop any existing table.  
$dbh->do("DROP TABLE IF EXISTS Customers CASCADE;");  
# Create a table to hold data.  
$dbh->do("CREATE TABLE Customers( \
```

```

```

Note: Loading a single, large data file into Vertica through a single data connection is less efficient than loading a number of smaller files onto multiple nodes in parallel. Loading onto multiple nodes prevents any one node from becoming a bottleneck.

Querying Using Perl

To query Vertica using Perl:

1. Prepare a query statement using the Perl DBI module's `prepare` function. This function returns a statement handle that you use to execute the query and get the result set.
2. Execute the prepared statement by calling the `execute` function on the statement handle.
3. Retrieve the results of the query from the statement handle using one of several methods, such as calling the statement handle's `fetchrow_array` function to retrieve a row of data, or `fetchall_array` to get an array of arrays containing the entire result set (not a good idea if your result set may be very large!).

The following example demonstrates querying the table created by the example shown in [Batch Loading Data Using Perl](#). It executes a query to retrieve all of the content of the table, then repeatedly calls the statement handle's `fetchrow_array` function to get rows of data in an array. It repeats this process until `fetchrow_array` returns `undef`, which means that there are no more rows to be read.

```
#!/usr/bin/perl
use strict;
use DBI;
my $attr = {RaiseError => 1 }; # Make errors fatal to the Perl script.
# Open a connection using a DSN. Supply the username and password.
my $dbh = DBI->connect("dbi:ODBC:VerticaDSN","ExampleUser","password123",
                      $attr);
# Prepare a query to get the content of the table
my $sth = $dbh->prepare("SELECT * FROM TEST ORDER BY C_ID ASC");
# Execute the query by calling execute on the statement handle
$sth->execute();
# Loop through result rows while we have them, getting each row as an array
while (my @row = $sth->fetchrow_array()) {
    # The @row array contains the column values for this row of data
    # Loop through the column values
    foreach my $column (@row) {
        if (!defined $column) {
            # NULLs are signaled by undefs. Set to NULL for clarity
            $column = "NULL";
        }
        print "$column\t"; # Output the column separated by a tab
    }
    print "\n";
}
$dbh->disconnect();
```

The example prints the following when run:

1	1.111	Hello World!	2001-01-01	01:01:01	2001-01-01	01:01:01	1
2	2.22222	How are you?	2002-02-02	02:02:02	2002-02-02	02:02:02	0
4	4.22222	NULL	2002-02-02	02:02:02	2002-02-02	02:02:02	0

Binding Variables to Column Values

Another method of retrieving the query results is to bind variables to columns in the result set using the statement handle's `bind_columns` function. You may find this method convenient if you need to perform extensive processing on the returned data, since your code can use variables rather than array references to access the data. The following example demonstrates binding variables to the result set, rather than looping through the row and column values.

```
#!/usr/bin/perl
use strict;
use DBI;
my $attr = {RaiseError => 1 }; # Make SQL errors fatal to the Perl script.
# Open a connection using a DSN. Supply the username and password.
```

```
my $dbh = DBI->connect("dbi:ODBC:VerticaDSN32","ExampleUser","password123",
                      $attr);
# Prepare a query to get the content of the table
my $sth = $dbh->prepare("SELECT * FROM TEST ORDER BY C_ID ASC");
$sth->execute();
# Create a set of variables to bind to the column values.
my ($C_ID, $C_FP, $C_VARCHAR, $C_DATE, $C_TIME, $C_TS, $C_BOOL);
# Bind the variable references to the columns in the result set.
$sth->bind_columns(\$C_ID, \$C_FP, \$C_VARCHAR, \$C_DATE, \$C_TIME,
                  \$C_TS, \$C_BOOL);

# Now, calling fetch() to get a row of data updates the values of the bound
# variables. Continue calling fetch until it returns undefined.
while ($sth->fetch()) {
    # Note, you should always check that values are defined before using them,
    # since NULL values are translated into Perl as undefined. For this
    # example, just check the VARCHAR column for undefined values.
    if (!defined $C_VARCHAR) {
        $C_VARCHAR = "NULL";
    }
    # Just print values separated by tabs.
    print "$C_ID\t$C_FP\t$C_VARCHAR\t$C_DATE\t$C_TIME\t$C_TS\t$C_BOOL\n";
}
$dbh->disconnect();
```

The output of this example is identical to the output of the previous example.

Preparing, Querying, and Returning a Single Row

If you expect a single row as the result of a query (for example, when you execute a [COUNT \(*\)](#) query), you can use the DBI module's `selectrow_array` function to combine executing a statement and retrieving an array as a result.

The following example shows using `selectrow_array` to execute and get the results of the [SHOW LOCALE](#) statement. It also demonstrates changing the locale using the `do` function.

```
#!/usr/bin/perl
use strict;
use DBI;
my $attr = {RaiseError => 1 }; # Make SQL errors fatal to the Perl script.
# Open a connection using a DSN. Supply the username and password.
my $dbh = DBI->connect("dbi:ODBC:VerticaDSN","ExampleUser","password123",
                      $attr);
# Demonstrate setting/getting locale.
# Use selectrow_array to combine preparing a statement, executing it, and
# getting an array as a result.
my @localerv = $dbh->selectrow_array("SHOW LOCALE;");
# The locale name is the 2nd column (array index 1) in the result set.
print "Locale: $localerv[1]\n";
# Use do() to execute a SQL statement to set the locale.
$dbh->do("SET LOCALE TO en_GB");
# Get the locale again.
@localerv = $dbh->selectrow_array("SHOW LOCALE;");
print "Locale is now: $localerv[1]\n";
```

```
$dbh->disconnect();
```

The result of running the example is:

```
Locale: en_US@collation=binary (LEN_KBINARY)  
Locale is now: en_GB (LEN)
```

Executing Queries and ResultBufferSize Settings

When you call the `execute()` function on a prepared statement, the client library retrieves results up to the size of the result buffer. The result buffer size is set using ODBC's [ResultBufferSize](#) setting.

Vertica does not allow multiple active queries per connection. However, you can simulate multiple active queries by setting the result buffer to be large enough to accommodate the entire results from the first query. To ensure that the ODBC client driver's buffer is large enough to store result set for first query you can set `ResultBufferSize` to 0. Setting this parameter to 0 makes the result buffer size unlimited. The ODBC driver allocates enough memory to read the entire result set. With the entire result set from the first query stored in the result set buffer, the database connection is free to perform another query. Your client can execute this second query even though it has not processed the entire result set from the first query.

However, if you set the `ResultBufferSize` to 0, you may find that your calls to `execute()` result in the operating system killing your Perl client script. The operating system may terminate your script if the ODBC driver allocates too much memory to store a large result set.

A workaround for this behavior is limit the number of rows returned by your query. Then you can set the `ResultBufferSize` to a value that accommodates this limited result set. For example, you can estimate the amount of memory needed to store a single row of your query result. Then use the [LIMIT](#) and [OFFSET](#) clauses to get a specific number of rows that will fit into the space you allocated using `ResultBufferSize`. If the results of your query is able to fit within the limited result set buffer, you can then perform additional queries with the same database connection. This solution makes your code more complex as you will need to perform multiple queries to get the entire result set. Also, it is not appropriate in cases where you need to operate on an entire result set at once, rather than just a portion of it at a time.

A better solution is to use separate database connections for each query you want to perform. The overhead of the additional database connection is small compared to the resources needed to process large data sets.

Conversions Between Perl and Vertica Data Types

Perl is a loosely-typed programming language that does not assign specific data types to values. It converts between string and numeric values based on the operations being performed on the values. For this reason, Perl has little problem extracting most string and numeric data types from Vertica. All interval data types (DATE, TIMESTAMP, etc.) are converted to strings. You can use several different date and time handling Perl modules to manipulate these values in your scripts.

Vertica NULL values translate to Perl's undefined (undef) value. When reading data from columns that can contain NULL values, you should always test whether a value is defined before using it.

When inserting data into Vertica, Perl's DBI module attempts to coerce the data into the correct format. By default, it assumes column values are VARCHAR unless it can determine that they are some other data type. If given a string value to insert into a column that has an integer or numeric data type, DBI attempts to convert the string's contents to the correct data type. If the entire string can be converted to a value of the appropriate data type, it inserts the value into the column. If not, inserting the row of data fails.

DBI transparently converts integer values into numeric or float values when inserting into column of FLOAT, NUMERIC, or similar data types. It converts numeric or floating values to integers only when there would be no loss of precision (the value to the right of the decimal point is 0). For example, it can insert the value 3.0 into an INTEGER column since there is no loss of precision when converting the value to an integer. It cannot insert 3.1 into an INTEGER column, since that would result in a loss of precision. It returns an error instead of truncating the value to 3.

The following example demonstrates some of the conversions that the DBI module performs when inserting data into Vertica.

```
#!/usr/bin/perl
use strict;
use DBI;
# Create a hash reference that holds a hash of parameters for the
# connection.
my $attr = {AutoCommit => 0, # Turn off autocommit
            PrintError => 0 # Turn off print error. Manually handled
            };
# Open a connection using a DSN. Supply the username and password.
my $dbh = DBI->connect("dbi:ODBC:VerticaDSN","ExampleUser","password123",
    $attr);
if (defined DBI::err) {
    # Connection failed.
    die "Failed to connect: $DBI::errstr";
}
```

```
print "Connection AutoCommit state is: " . $dbh->{AutoCommit} . "\n";
# Create table to hold inserted data
$dbh->do("DROP TABLE IF EXISTS TEST CASCADE;");
$dbh->do("CREATE TABLE TEST( \
    C_ID INT, \
    C_FP FLOAT,\
    C_VARCHAR VARCHAR(100),\
    C_DATE DATE, C_TIME TIME,\
    C_TS TIMESTAMP,\
    C_BOOL BOOL)");
# Populate an array of arrays with values.
my @data = (
    # Start with matching data types
    [1,1.111,'Matching datatypes','2001-01-01','01:01:01'
     , '2001-01-01 01:01:01','t'],
    # Force floats -> int and int -> float.
    [2.0,2,"Ints <-> floats",'2002-02-02','02:02:02'
     , '2002-02-02 02:02:02',1],
    # Float -> int *only* works when there is no loss of precision.
    # this row will fail to insert:
    [3.1,3,"float -> int with trunc?",'2003-03-03','03:03:03'
     , '2003-03-03 03:03:03',1],
    # String values are converted into numbers
    ["4","4.4","Strings -> numbers", '2004-04-04','04:04:04',
     , '2004-04-04 04:04:04',0],
    # String -> numbers only works if the entire string can be
    # converted into a number
    ["5 and a half","5.5","Strings -> numbers", '2005-05-05',
     '05:05:05', , '2005-05-05 05:05:05',0],
    # Number are converted into string values automatically,
    # assuming they fit into the column width.
    [6,6.6,3.14159, '2006-06-06','06:06:06',
     , '2006-06-06 06:06:06',0],
    # There are some variations in the accepted date strings
    [7,7.7,'Date/time formats', '07/07/2007','07:07:07',
     , '07-07-2007 07:07:07',1],
);
# Create a prepared statement to use parameters for inserting values.
my $sth = $dbh->prepare_cached("INSERT into test values(?,?,?,?,?,?)");
my $rowcount = 0; # Count # of rows
# Loop through the arrays to insert values
foreach my $tuple (@data) {
    $rowcount++;
    # Insert the row
    my $retval = $sth->execute(@$tuple);

    # See if the row was successfully inserted.
    if ($retval == 1) {
        # Value of 1 means the row was inserted (1 row was affected by insert)
        print "Row $rowcount successfully inserted\n";
    } else {
        print "Inserting row $rowcount failed with error " .
            $sth->state . " " . $sth->errstr . "\n";
    }
}
# Commit the data
$dbh->commit();
# Prepare a query to get the content of the table
$sth = $dbh->prepare("SELECT * FROM TEST ORDER BY C_ID ASC");
$sth->execute() or die "Error: " . $dbh->errstr;
```

The following example Perl script demonstrates directly inserting UTF-8 strings into Vertica and then reading them back. The example writes a text file with the output, since there are many problems displaying Unicode characters in terminal windows or consoles.

```
#!/usr/bin/perl
use strict;
use DBI;
# Open a connection using a DSN.
my $dbh = DBI->connect("dbi:ODBC:VerticaDSN","ExampleUser","password123");
unless (defined $dbh) {
    # Connection failed.
    die "Failed to connect: $DBI::errstr";
}
# Output to a file. Displaying Unicode characters to a console or terminal
# window has many problems. This outputs a UTF-8 text file that can
# be handled by many Unicode-aware text editors:
open OUTFILE, '>:utf8', "unicodeout.txt";
# See if the DBD::ODBC driver was compiled with Unicode support. If this returns
# 1, your Perl script will get strings from the driver with the UTF-8
# flag set on them, ensuring that Perl handles them correctly.
print OUTFILE "Was DBD::ODBC compiled with Unicode support? " .
    $dbh->{odbc_has_unicode} . "\n";

# Create a table to hold VARCHARs
$dbbh->do("DROP TABLE IF EXISTS TEST CASCADE;");

# Create a table to hold data. Remember that the width of the VARCHAR column
# is the number of bytes set aside to store strings, which often does not equal
# the number of characters it can hold when it comes to Unicode!
$dbbh->do("CREATE TABLE test( C_VARCHAR VARCHAR(100) )");
print OUTFILE "Inserting data...\n";
# Use Do to perform simple inserts
$dbbh->do("INSERT INTO test VALUES('Hello')");
# This string contains several non-latin accented characters and symbols, encoded
# with Unicode escape notation. They are converted by Perl into UTF-8 characters
$dbbh->do("INSERT INTO test VALUES('My favorite band is " .
    "\N{U+00DC}m1\N{U+00E4}\N{U+00FC}t \N{U+00D6}v\N{U+00EB}rk\N{U+00EF}11" .
    " \N{U+263A}')");
# Some Chinese (Simplified) characters. This again uses escape sequence
# that Perl translates into UTF-8 characters.
$dbbh->do("INSERT INTO test VALUES('\x{4F60}\x{597D}')");
print OUTFILE "Getting data...\n";
# Prepare a query to get the content of the table
my $sth = $dbh->prepare_cached("SELECT * FROM test");
# Execute the query by calling execute on the statement handle
$sth->execute();
# Loop through result rows while we have them
while (my @row = $sth->fetchrow_array()) {
    # Loop through the column values
    foreach my $column (@row) {
        print OUTFILE "$column\t";
    }
    print OUTFILE "\n";
}
close OUTFILE;
$dbbh->disconnect();
```

Viewing the unicodeout.txt file in a UTF-8-capable text editor or viewer displays:

```
Was DBD::ODBC compiled with Unicode support? 1
Inserting data...
Getting data...
My favorite band is Ümläüt Övärkill @
你好
Hello
```

Note: Terminal windows and consoles often have problems properly displaying Unicode characters. That is why the example writes the output to a text file. With some text editors, you may need to manually set the encoding of the text file to UTF-8 in order for the characters to properly appear (and the font used to display text must have a full Unicode character set). If the character still do not show up, it may be that your version of DBD::ODBC was not compiled with UTF-8 support.

Programming PHP Client Applications

You can connect to Vertica through PHP-ODBC using the [Unix ODBC](#) or [iODBC](#) library.

In order to use PHP with Vertica, you must install the following packages (and their dependencies):

- php
- php-odbc
- php-pdo
- UnixODBC (if you are using the Unix ODBC driver)
- libiodbc (if you are using the iODBC driver)

PHP on Linux

PHP is available with most Linux operating systems as a module for the Apache web server. Check your particular Linux repository for PHP RPMs or Debian packages. You can also build PHP from source. See the PHP web site for documentation and source downloads.

PHP on Windows

PHP is available for windows for both the Apache and IIS web servers. You can download PHP for Windows and view installation instructions at the PHP web site.

The PHP ODBC Drivers

PHP supports both the [UnixODBC](#) drivers and [iODBC](#) drivers. Both drivers use PHP's ODBC database abstraction layer.

Setup

You must read [Programming ODBC Client Applications](#) before connecting to Vertica through PHP. The following example ODBC configuration entries detail the typical settings required for PHP ODBC connections. The driver location assumes you have copied the Vertica drivers to `/usr/lib64`.

Example odbc.ini

```
[ODBC Data Sources]
VerticaDSNunixodbc = exampleldb
VerticaDNSiodbc = exampleldb2
[VerticaDSNunixodbc]
Description = VerticaDSN Unix ODBC driver
Driver = /usr/lib64/libverticaodbc.so
Database = Telecom
Servername = localhost
Username = dbadmin
Password =
Port = 5433
[VerticaDNSiodbc]
Description = VerticaDSN iODBC driver
Driver = /usr/lib64/libverticaodbc.so
Database = Telecom
Servername = localhost
Username = dbadmin
Password =
Port = 5433
```

Example odbcinst.ini

```
# Vertica
[VerticaDSNunixodbc]
Description = VerticaDSN Unix ODBC driver
Driver = /usr/lib64/libverticaodbc.so
[VerticaDNSiodbc]
Description = VerticaDSN iODBC driver
Driver = /usr/lib64/libverticaodbc.so
[ODBC]
Threading = 1
```

Verify the Vertica UnixODBC or iODBC Library

Verify the Vertica UnixODBC library can load all dependant libraries with the following command (assuming you have copies the libraries to /usr/lib64):

For example:

```
ldd /usr/lib64/libverticaodbc.so
```

You must resolve any "not found" libraries before continuing.

Test Your ODBC Connection

Test your ODBC connection with the following.

```
isql -v VerticaDSN
```

PHP Unicode Support

PHP does not offer native Unicode support. PHP only supports a 256-character set. However, PHP provides the UTF-8 functions `utf8_encode()` and `utf8_decode()` to provide some basic Unicode functionality.

See the PHP manual for [strings](#) for more details about PHP and Unicode.

Querying the Database Using PHP

The example script below details the use of PHP ODBC functions to connect to the Vertica Analytics Platform.

```
<?php
# Turn on error reporting
error_reporting(E_ERROR | E_WARNING | E_PARSE | E_NOTICE);
# A simple function to trap errors from queries
function errortrap_odbc($conn, $sql) {
    if(!$rs = odbc_exec($conn,$sql)) {
        echo "<br/>Failed to execute SQL: $sql<br/>" . odbc_errormsg($conn);
    } else {
        echo "<br/>Success: " . $sql;
    }
    return $rs;
}
```

```
}
# Connect to the Database
$dsn = "VerticaDSNunixodbc";
$conn = odbc_connect($dsn, '', '') or die ("<br/>CONNECTION ERROR");
echo "<p>Connected with DSN: $dsn</p>";
# Create a table
$sql = "CREATE TABLE TEST(
    C_ID INT,
    C_FP FLOAT,
    C_VARCHAR VARCHAR(100),
    C_DATE DATE, C_TIME TIME,
    C_TS TIMESTAMP,
    C_BOOL BOOL)";
$result = errortrap_odbc($conn, $sql);
# Insert data into the table with a standard SQL statement
$sql = "INSERT into test values(1,1.1,'abcdefg1234567890','1901-01-01','23:12:34
','1901-01-01 09:00:09','t')";
$result = errortrap_odbc($conn, $sql);
# Insert data into the table with odbc_prepare and odbc_execute
$values = array(2,2.28,'abcdefg1234567890','1901-01-01','23:12:34','1901-01-01 0
9:00:09','t');
$statement = odbc_prepare($conn,"INSERT into test values(?,?,?,?,,?,?)");
if(!$result = odbc_execute($statement, $values)) {
    echo "<br/>odbc_execute Failed!";
} else {
    echo "<br/>Success: odbc_execute.";
}
# Get the data from the table and display it
$sql = "SELECT * FROM TEST";
if($result = errortrap_odbc($conn, $sql)) {
    echo "<pre>";
    while($row = odbc_fetch_array($result) ) {
        print_r($row);
    }
    echo "</pre>";
}
# Drop the table and projection
$sql = "DROP TABLE TEST CASCADE";
$result = errortrap_odbc($conn, $sql);
# Close the ODBC connection
odbc_close($conn);
?>
```

Example Output

The following is the example output from the script.

```
Success: CREATE TABLE TEST( C_ID INT, C_FP FLOAT, C_VARCHAR VARCHAR(100), C_DATE DATE, C_TIME TIME,
C_TS TIMESTAMP, C_BOOL BOOL)
Success: INSERT into test values(1,1.1,'abcdefg1234567890','1901-01-01','23:12:34 ','1901-01-01
09:00:09','t')
Success: odbc_execute.
Success: SELECT * FROM TEST
Array
(
    [C_ID] => 1
```

```
[C_FP] => 1.1
[C_VARCHAR] => abcdefg1234567890
[C_DATE] => 1901-01-01
[C_TIME] => 23:12:34
[C_TS] => 1901-01-01 09:00:09
[C_BOOL] => 1
)
Array
(
  [C_ID] => 2
  [C_FP] => 2.28
  [C_VARCHAR] => abcdefg1234567890
  [C_DATE] => 1901-01-01
  [C_TIME] => 23:12:34
  [C_TS] => 1901-01-01 23:12:34
  [C_BOOL] => 1
)
Success: DROP TABLE TEST CASCADE
```

Managing Query Execution Between the Client and Vertica

Multiple Active Result Sets (MARS)

ResultBufferSize

ResultBufferSize

By default, Vertica uses the `ResultBufferSize` parameter to determine the maximum size (in bytes) of a result set that a client can retrieve from a server. When `ResultBufferSize` is enabled, Vertica sends rows of data directly to the client making the query. The number of rows returned to the client at each fetch of data depends on the size (in bytes) of the `ResultBufferSize` parameter.

Sometimes, the size of the result set requested by the client is greater than what the `ResultBufferSize` parameter allows. In such cases, Vertica retrieves only a portion of the result set at a time. Each fetch of data returns the amount of data equal to the size set by the `ResultBufferSize` parameter. Ultimately, as the client iterates over the individual fetches of data, the entire result set is returned.

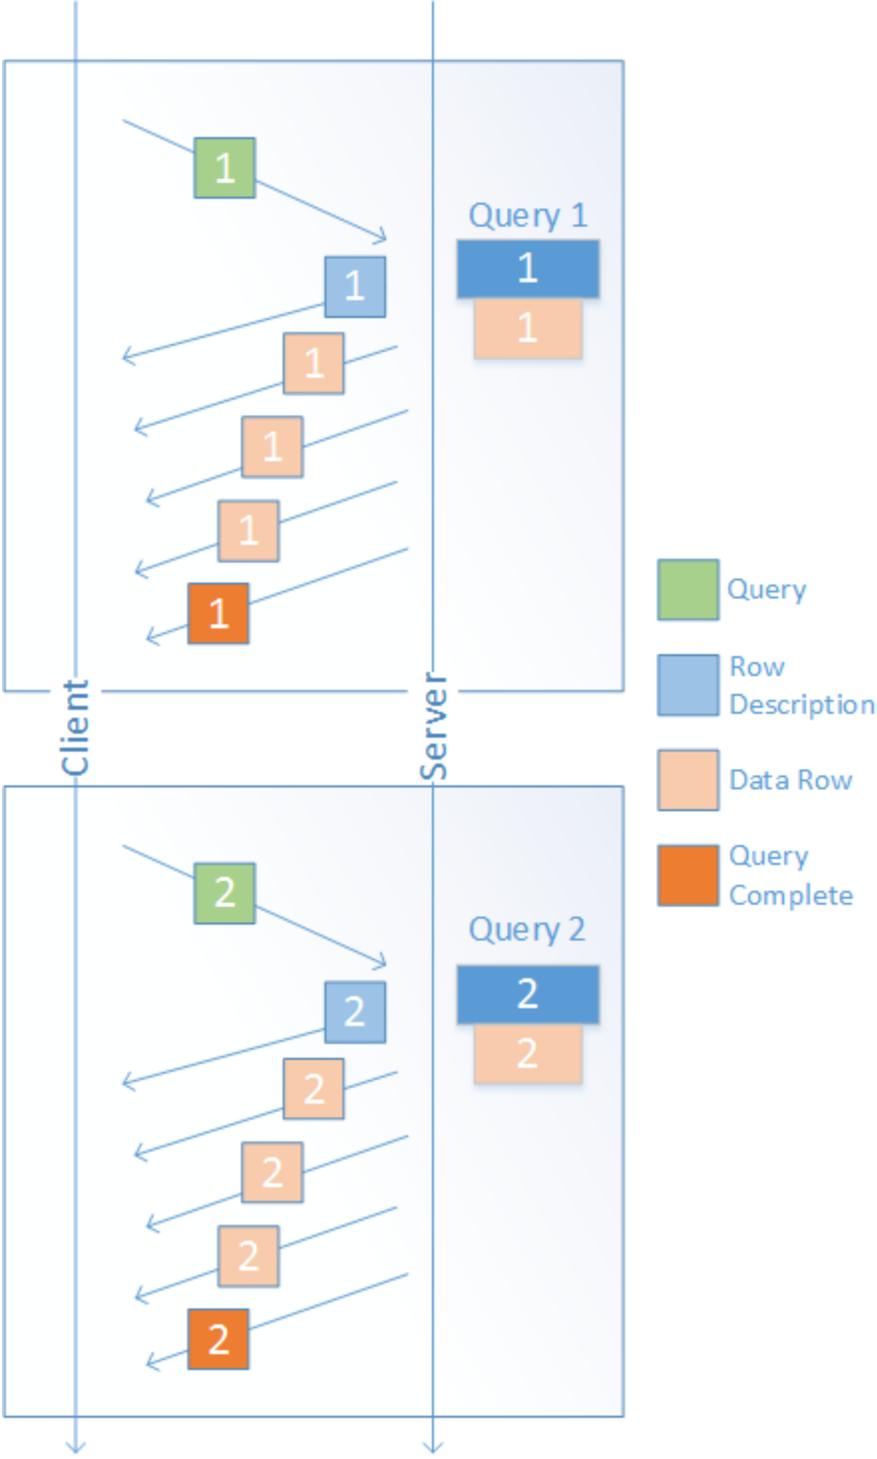

Benefits of ResultBufferSize

If you are concerned with the effect of your queries on network latency, `ResultBufferSize` may provide an advantage over MARS. MARS requires that the client wait until all rows of data are written to the server before the client can retrieve the data. This delay may cause latency issues for your network while waiting for the results to be stored.

In addition, MARS requires that you send two separate requests to return rows of data. The first request performs the query execution which stores the result set on the server. The second request retrieves the data rows that are stored on the server. With `ResultBufferSize`, you only need to send one request. This request both executes and retrieves the data rows of interest.

Query Execution with ResultBufferSize

The following graphic shows how Vertica returns rows of data from a database to the client with `ResultBufferSize` enabled:

The query execution performs the following steps:

1. The client sends a query, such as a [SELECT](#) statement, to the server. In the preceding graphic, the first query is named Query 1.

2. The server receives the client's request and begins to send both a description of the result set and the requested rows of data back to the client.
3. After all possible rows are returned to the client, the execution is complete. The size of the data set returned equals either that of the data that was requested or the maximum amount of data that ResultBufferSize parameter can retrieve. If the ResultBufferSize maximum size is not yet reached, Vertica can execute Query 2.

The server can accept Query 2 and perform the same steps that it did for Query 1. If the results for Query 1 had reached the maximum ResultBufferSize allowable, Vertica could not execute Query 2 until the client freed the results from Query 1.

After Query 2 runs, you cannot view the results you retrieved for Query 1, unless you execute Query 1 again.

Setting an Unlimited Buffer Size

Setting ResultBufferSize to 0 tells the client driver to use an unlimited result set buffer. With this setting, the client library allocates as much memory as it needs to read the entire result set of a query. You may choose to set ResultBufferSize to 0 if you want to simulate having multiple active queries over a single database connection at the same time. With an unlimited buffer size, your client can run a query and have its entire result set stored in memory. This ends the first query, so your client can execute a second query before it fully processes the results of the first query.

A drawback of this method is that your query may consume too much memory if your queries return large result sets. This over-allocation of memory can result in the operating system terminating your client. Due to this risk, consider using multiple database connections instead of trying to reuse a single connection for multiple queries. The overhead of multiple database connections is small compared to the overall amount of resources required to process a large data set.

Multiple Active Result Sets (MARS)

You can only enable MARS when you connect to Vertica using a JDBC client connection. MARS allows the execution of multiple queries on a single connection. While ResultBufferSize sends the results of a query directly to the client, MARS stores the results first on the server. Once query execution has finished and all of the results have been stored, you can make a retrieval request to the server to have rows returned to the client.

MARS is set at the session level and must be enabled for every new session. When MARS is enabled, `ResultBufferSize` is disabled. No error is returned, however the `ResultBufferSize` parameter is ignored.

Benefits of MARS

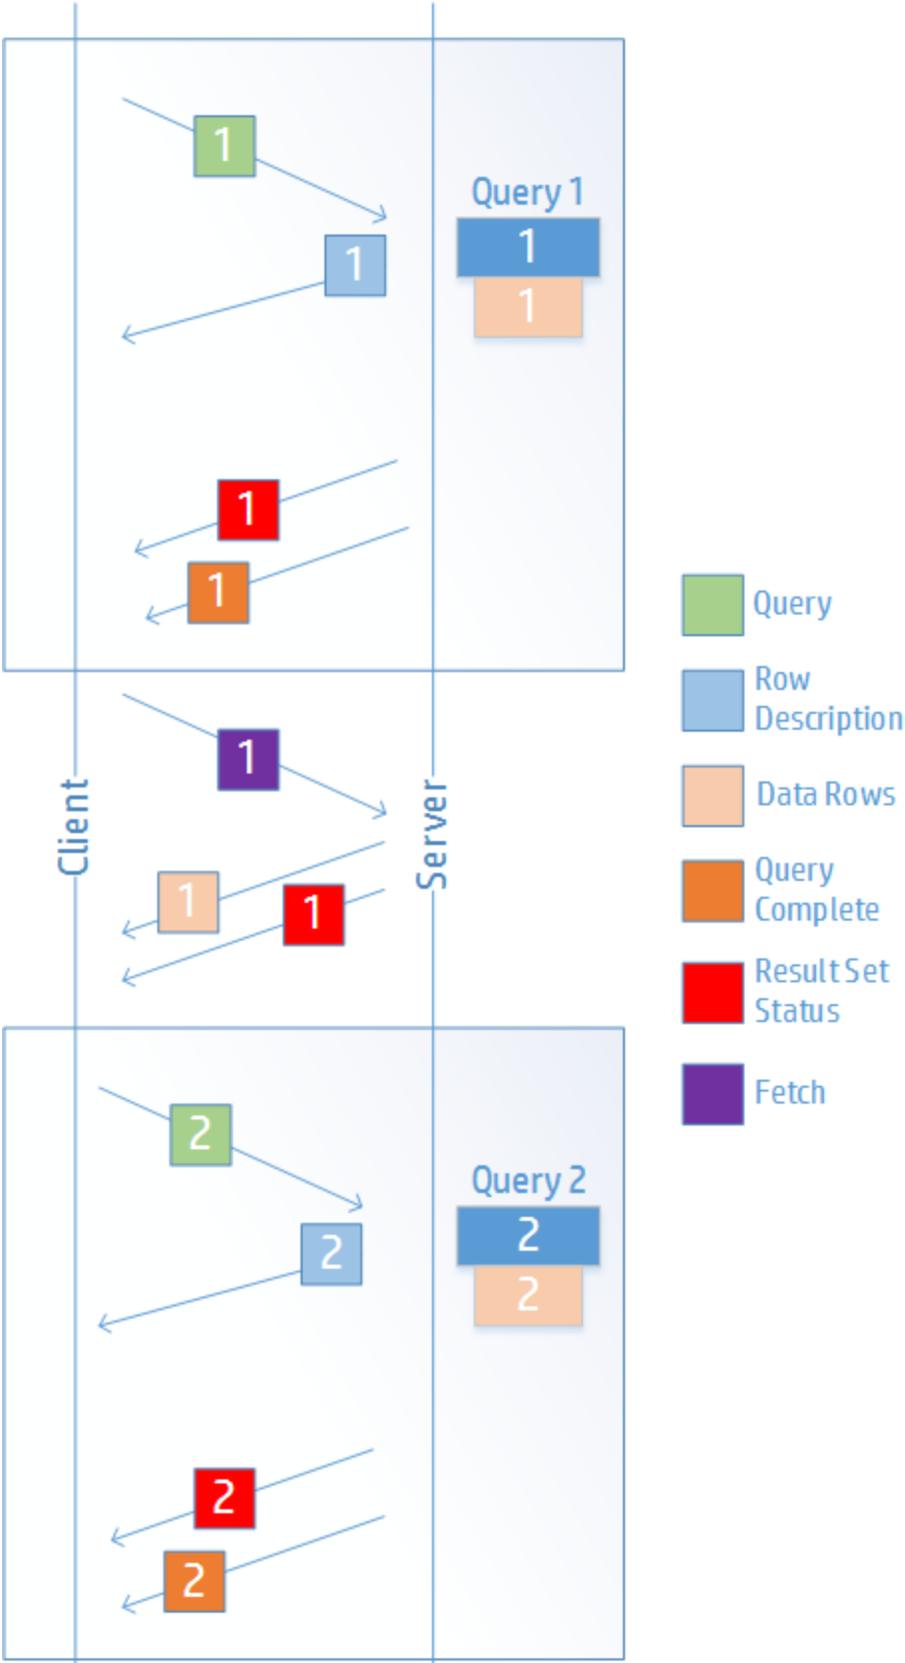

In comparison with `ResultBufferSize`, MARS enables you to store multiple result sets from different queries at the same time. You can also send new queries before all of the results of a previous result set have been returned to the client. This allows applications to decouple query execution from result retrieval so that, on a single connection, you can process different results at the same time.

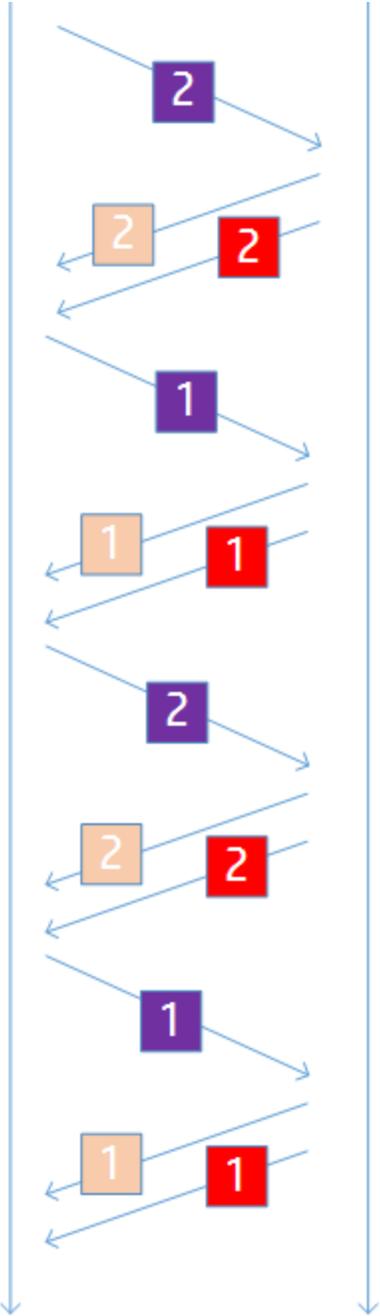

When you enable `ResultBufferSize`, you must wait until all result sets have been returned to the client before a new query can be executed.

Another benefit of MARS is that it allows you to free up query resources faster than `ResultBufferSize` allows. While a query is running, resources are held by that query session. When `ResultBufferSize` is enabled, a client that is performing slowly might read a single row of a result set and then have to stop to retrieve the next row. This prevents the query from finishing quickly and, therefore, prevents the resources used from being freed up for other applications. With MARS, the speed of the client is irrelevant to the reading of rows. As soon as the results are written to the MARS storage, the resources are freed and the speed at which the client retrieves rows no longer matters.

Query Execution with MARS

The following graphic demonstrates how multiple queries to the server are handled when MARS is enabled:

Query 1:

- 1. Query 1 is sent to the server.
- 2. Query 1's row description and the status of its result set are returned to the client. However, no results are returned to the client at this time.
- 3. Query 1 completes and its results are saved on the server.

- a. You can now send commands to retrieve the rows of Query 1's result set. These rows are stored on the server. Retrieved rows are sent to the client along with the status of the result set. By keeping track of the status of the result set, Vertica is able to keep track of which rows have been retrieved from the server.
4. Now that Query 1 has successfully completed, and its result sets are being stored on the server, Query 2 can be executed.

Query 2:

1. Query 2 is sent to the server.
2. Query 2's row description and the status of its result set are returned to the client. However, no results are returned to the client at this time.
3. Query 2 completes and its results are stored on the server. Both Query 1 and Query 2 now have result sets stored on the server.
4. You can now send retrieval requests to both Query 1 and Query 2's result sets that are stored on the server. Whenever a retrieval request is made for rows from Query 1, the request is sent and rows and the result set status are sent to the client. The same occurs for Query 2.

Once all rows have been read by the client, the MARS storage on the server closes the active results session. The MARS storage on the server is then freed to store more data. The MARS storage also closes and frees once your session is finished.

Enabling and Disabling MARS

You can enable and disable MARS in two different ways:

1. To enable MARS using the JDBC client connection properties, see [JDBC Connection Properties](#).
2. To enable MARS using the SET SESSION command, see [SET SESSION MULTIPLEACTIVERESULTSETS](#).

Management API

The Management API is a REST API that you can use to view and manage Vertica databases with scripts or applications that accept REST and JSON. The response format for all requests is JSON.

cURL

cURL is a command-line tool and application library used to transfer data to or from a server. It uses URL syntax, such as HTTP and HTTPS. All API requests sent to a Vertica server must be made using HTTPS. A request made using HTTP will fail.

There are four HTTP requests that can be passed using cURL to call API methods:

Request	Description
GET	Retrieves data.
PUT	Updates data.
POST	Creates new data.
DELETE	Deletes data.

Syntax

```
curl https://<NODE>:5444/
```

Options

-h --help	Lists all available command-line options.
-H --header	Allows you to use custom headers in your command. This is useful for sending a request that requires a VerticaAPIKEY. <pre>curl -H "VerticaApiKey: ValidAPIKey" https://<NODE>:5444/</pre>

<code>-k --insecure</code>	<p>Allows SSL connections without certificate validation.</p> <pre>curl -k https://<NODE>:5444/</pre>
<code>-X --request</code>	<p>Specifies the custom request used when communicating with a server.</p> <pre>curl -X REQUEST https://<NODE>:5444/</pre> <p>Can be one of the following values:</p> <ul style="list-style-type: none">• GET• PUT• POST• DELETE <p>Note: If no request is specified, cURL automatically defaults to the GET request.</p>

There are many more options available to add to your cURL query. For a comprehensive list with descriptions, visit the [cURL Documentation Website](#).

General API Information

These API calls can interact with either standard Vertica nodes or Management Console nodes.

GET /	Returns the agent-specific information useful for version checking and service discovery.
GET api	Returns a list of api objects and properties.

GET /

Returns API version information and a list of links to child resources for the Management API.

Resource URL

```
https://<NODE>:5444/
```

Authentication

Not required.

Parameters

None.

Example Request

GET	<pre>https://<NODE>:5444/</pre>

Rest APIs for the Agent

These API calls interact with standard Vertica nodes.

Backup and Restore

GET backups	Returns all the backups that have been created for all vbr configuration files (*.ini) that are located in the /opt/vertica/config directory.
POST backups/:config_script_base	Creates a new backup as defined by the given vbr configuration script base (filename without the .ini extension).
GET backups/:config_script_base/:archive_id	Returns details for a specific backup archive.
POST restore/:archive_id	Restores a backup.

Databases

GETdatabases	Returns a list of databases, their properties, and current status.
POST databases	Creates a new database by supplying a valid set of parameters.
GET databases/:database_name	Returns details about a specific database.
PUT databases/:database_name	Starts, stops, rebalances, or runs Workload Analyzer on a database.
DELETE databases/:database_name	Deletes an existing database.
GET databases/:database_name/configuration	Returns the current configuration parameters from the database.
PUT databases/:database_name/configuration	Sets one or more configuration parameters in the database.
GET databases/:database_name/hosts	Returns hosts details for a specific database.

POST databases/:database_name/hosts	Adds a new host to the database.
DELETE databases/:database_name/hosts/:host_id	Removes a host from the database.
POST databases/:database_name/hosts/:host_id/process	Starts the database process on a specific host.
DELETE databases/:database_name/hosts/:host_id/process	Stops the database on a specific host.
POST databases/:database_name/hosts/:host_id/replace_with/:host_id_new	Replaces a host with a standby host in the database.
GET databases/:database_name/license	Returns the Vertica license that the specified database is using.
PUT databases/:database_name/license	Upgrades the license in the database.
GET databases/:database_name/licenses	Returns all the feature licenses that the specified database is using.
GET databases/:database_name/nodes	Returns a list of nodes for the specified database.
GET databases/:database_name/nodes/:node_id	Returns details on a specific node for the specified database.
POST databases/:database_name/process	Starts the specified database.
GET databases/:database_name/process	Returns the state of the database as either UP or DOWN.
DELETE databases/:database_name/process	Stops the specified database on all hosts.
POST databases/:database_name/rebalance/process	Rebalances the specified database. This option can have a long run time.
POST databases/:database_name/wla/process	Runs the analyze workload action against the specified database. This option can have a long run time.

Hosts

GET hosts	Returns a list of hosts in this cluster.
GET hosts/:hostid	Returns details for a specific host in this cluster.

Jobs

GET jobs	Returns a list of jobs the agent is tracking, along with their current status and exit codes.
GET jobs/:id	Returns the details (the saved output) for a specific job.

Licenses

POST licenses	Uploads and applies a new license to this cluster.
GET licenses	Returns the license field that databases created on this cluster use.

Nodes

GET nodes	Returns a list of nodes in this cluster.
GET nodes/:nodeid	Returns details for a specific node in this cluster.

Webhooks

GET webhooks	Returns a list of active webhooks.
POST webhooks/subscribe	Creates a new webhook.
DELETE webhooks/:subscriber_id	Deletes an existing webhook.

VerticaAPIKey

The Management API requires an authentication key, named VerticaAPIKEY, to access some API resources. You can manage API keys by using the **apikeymgr** command-line tool.

```
usage: apikeymgr [-h] [--user REQUESTOR] [--app APPLICATION] [--delete]
                [--create] [--update] [--migrate]
                [--secure {restricted,normal,admin}] [--list]
```

API key management tool

optional arguments:

```
-h, --help          show this help message and exit
--user REQUESTOR   The name of the person requesting the key
--app APPLICATION  The name of the application that will use the key
--delete           Delete the key for the given R & A
--create           Create a key for the given R & A
--update          Update a key for the given R & A
--migrate          migrate the keyset to the latest format
--secure {restricted,normal,admin}
                  Set the keys security level
--list            List all the keys known
```

Example Request

To create a new VerticaAPIKEY for the dbadmin user with admin access, enter the following:

```
$ apikeymgr --user dbadmin --app vertica --create --secure admin
```

Response:

```
Requestor : dbadmin
Application: vertica
API Key   : ValidAPIKey
Synchronizing cluster...
```

Backup and Restore

You can use these API calls to perform backup and restore tasks for your database.

GET backups

Returns all the backups that have been created for all vbr configuration files (*.ini) that are located in the /opt/vertica/config directory.

POST backups/:config_script_base	Creates a new backup as defined by the given vbr configuration script base (filename without the .ini extension).
GET backups/:config_script_base/:archive_id	Returns details for a specific backup archive.
POST restore/:archive_id	Restores a backup.

GET backups

Returns a list of all backups created for vbr configuration (*.ini) files that reside in /opt/vertica/config and provides details about each backup.

Resource URL

```
https://<NODE>:5444/backups
```

Authentication

Requires a [VerticaAPIKey](#) in the request header.

The API key must have **restricted** level security or higher.

Parameters

None.

Example Request

GET	<pre>https://<NODE>:5444/backups</pre>
------------	--

Response:

```
[
  {
    "backups": [
      {
        "backup": "backup3_20140707_114852",
        "epoch": "61",
        "hosts": "v_vmart_node0001(10.20.100.247)",
        "objects": ""
      }
    ],
    "config_file": "/opt/vertica/config/backup3.ini",
    "num_backups": 1
  },
  {
    "backups": [
      {
        "backup": "backup_20140707_113737",
        "epoch": "61",
        "hosts": "v_vmart_node0001(10.20.100.247)",
```

```
        "objects": ""
      },
      {
        "backup": "backup_archive20140707_113645",
        "epoch": "60",
        "hosts": "v_vmart_node0001(10.20.100.247)",
        "objects": ""
      }
    ],
    "config_file": "/opt/vertica/config/backup.ini",
    "num_backups": 2
  }
]
```

POST backups/:config_script_base

Creates a new backup job for the backup defined in the vbr configuration script `:config_script_base`. The vbr configuration script must reside in `/opt/vertica/configuration`. The `:config_script_base` value does not include the `.ini` filename extension.

To determine valid `:config_script_base` values, see [GET backups](#).

Returns a job ID that you can use to determine the status of the job.

Resource URL

```
https://<NODE>:5444/backups/:config_script_base
```

Authentication

Requires a [VerticaAPIKey](#) in the request header.

The API key must have **restricted** level security or higher.

Parameters

None.

Example Request

POST	<pre>https://<NODE>:5444/backups/backup3</pre>
-------------	--

Response:

```
{
  "id": "CreateBackup-VMart-1404750602.03",
  "url": "/jobs/CreateBackup-VMart-1404750602.03"
}
```

GET backups/:config_script_base/:archive_id

Returns details on a specific backup. You must provide the `:config_script_base`. This value is the name of a vbr config file (without the `.ini` filename extension) that resides in `/opt/vertica/config`. The `:archive_id` is the value of the `backup` field that the [GET backups](#) command returns.

Resource URL

```
https://<NODE>:5444/backups/:config_script_base/:archive_id
```

Authentication

Requires a [VerticaAPIKey](#) in the request header.

The API key must have **restricted** level security or higher.

Parameters

None.

Example Request

GET	<pre>https://<NODE>:5444/backups/backup3/backup3_20140707_123254</pre>
------------	--

Response:

```
{
  "backup": "backup3_20140707_123254",
  "config_file": "/opt/vertica/config/backup3.ini",
  "epoch": "62",
  "hosts": "v_vmart_node0001(10.20.100.247)",
  "objects": ""
}
```

POST restore/:archive_id

Creates a new restore job to restore the database from the backup archive identified by :archive_id. The :archive_id is the value of a *backup* field that the [GET backups](#) command returns.

Returns a job ID that you can use to determine the status of the job. See [GET jobs](#).

Resource URL

```
https://<NODE>:5444/restore/:archive_id
```

Authentication

Requires a [VerticaAPIKey](#) in the request header.

The API key must have **restricted** level security or higher.

Parameters

None.

Example Request

POST	<pre>https://<NODE>:5444/restore/backup3_20140707_132904</pre>
-------------	--

Response:

```
{
  "id": "RestoreBackup-VMart-1404760113.71",
  "url": "/jobs/RestoreBackup-VMart-1404760113.71"
}
```

Databases

You can use these API calls to interact with your database.

GETdatabases	Returns a list of databases, their properties, and current status.
------------------------------	--

POST databases	Creates a new database by supplying a valid set of parameters.
GET databases/:database_name	Returns details about a specific database.
PUT databases/:database_name	Starts, stops, rebalances, or runs Workload Analyzer on a database.
DELETE databases/:database_name	Deletes an existing database.
GET databases/:database_name/configuration	Returns the current configuration parameters from the database.
PUT databases/:database_name/configuration	Sets one or more configuration parameters in the database.
GET databases/:database_name/hosts	Returns hosts details for a specific database.
POST databases/:database_name/hosts	Adds a new host to the database.
DELETE databases/:database_name/hosts/:host_id	Removes a host from the database.
POST databases/:database_name/hosts/:host_id/process	Starts the database process on a specific host.
DELETE databases/:database_name/hosts/:host_id/process	Stops the database on a specific host.
POST databases/:database_name/hosts/:host_id/replace_with/:host_id_new	Replaces a host with a standby host in the database.
GET databases/:database_name/license	Returns the Vertica license that the specified database is using.
PUT databases/:database_name/license	Upgrades the license in the database.
GET databases/:database_name/licenses	Returns all the feature licenses that the specified database is using.
GET databases/:database_name/nodes	Returns a list of nodes for the specified database.
GET databases/:database_name/nodes/:node_id	Returns details on a specific node for the specified database.

POST databases/:database_name/process	Starts the specified database.
GET databases/:database_name/process	Returns the state of the database as either UP or DOWN.
DELETE databases/:database_name/process	Stops the specified database on all hosts.
POST databases/:database_name/rebalance/process	Rebalances the specified database. This option can have a long run time.
POST databases/:database_name/wla/process	Runs the analyze workload action against the specified database. This option can have a long run time.

GETdatabases

Returns a list of databases, their current status, and database properties.

Resource URL

```
https://<NODE>:5444/databases
```

Authentication

Requires a [VerticaAPIKey](#) in the request header.

The API key must have **restricted** level security or higher.

Parameters

None.

Example Request

GET	<pre>https://<NODE>:5444/databases</pre>
------------	--

An example of the full request using cURL:

```
curl -H "VerticaApiKey: ValidAPIKey" https://<NODE>:5444/databases
```

Response:

```
{
  "body": [
    {
      "href": "/databases/VMart",
      "mime-type": [
        "application/vertica.database.json-v2"
      ],
      "name": "VMart",
      "port": "5433",
      "status": "UP"
    },
    {
      "href": "/databases/testDB",
      "mime-type": [
        "application/vertica.database.json-v2"
      ],

```

```
        "name": "testDB",  
        "port": "5433",  
        "status": "DOWN"  
    }  
],  
"href": "/databases",  
"links": [  
    "[:database_name"  
],  
"mime-type": "application/vertica.databases.json-v2"  
}
```

POST databases

Creates a job to create a new database with the provided parameters.

Important: You must stop any running databases on the nodes on which you want to create the new database. If you do not, database creation fails.

Returns a job ID that can be used to determine the status of the job. See [GET jobs](#).

Resource URL

```
https://<NODE>:5444/database
```

Authentication

Requires a [VerticaAPIKey](#) in the request header.

The API key must have **admin** level security.

Parameters

name	Name of the database to create.
passwd	Password for the new database.
only	Optional list of hostnames to include in the database. By default, all nodes in the cluster are added to the database.
exclude	Optional list of hostnames to exclude from the database.
catalog	Path of the catalog directory.
data	Path of the data directory.
port	Port where the database listens for client connections. Default is 5433.

Example Request

POST	<pre>https://<NODE>:5444/databases?passwd=vertica&name=testDB &catalog=%2Fhome%2Fdbadmin%2FtestDB &data=%2Fhome%2Fdbadmin%2FtestDB</pre>
-------------	--

Response:

```
{  
  "jobid": "CreateDatabase-testDB-2014-07-07 15:49:53.219445",  
  "resource": "/jobs/CreateDatabase-testDB-2014-07-07 15:49:53.219445",  
  "userid": "dbadmin"  
}
```

GET databases/:database_name

Returns details about a specific database. The `:database_name` is the value of the *name* field that the [GETdatabases](#) command returns.

Resource URL

```
https://<NODE>:5444/databases/:database_name
```

Authentication

Requires a [VerticaAPIKey](#) in the request header.

The API key must have **restricted** level security or higher.

Parameters

None.

Example Request

GET	<pre>https://<NODE>:5444/databases/VMart</pre>
------------	--

Response:

```
{
  "body": {
    "database_id": "VMart",
    "id": "VMart",
    "nodes": "v_vmart_node0001,v_vmart_node0002,v_vmart_node0003",
    "nodes_new": [
      {
        "catalog_base": "/home/dbadmin",
        "data_base": "/home/dbadmin",
        "host": "10.20.100.247",
        "id": "v_vmart_node0001"
      },
      {
        "catalog_base": "/home/dbadmin",
        "data_base": "/home/dbadmin",
        "host": "10.20.100.248",
        "id": "v_vmart_node0002"
      },
      {

```

```
        "catalog_base": "/home/dbadmin",
        "data_base": "/home/dbadmin",
        "host": "10.20.100.249",
        "id": "v_vmart_node0003"
      }
    ],
    "path": "/home/dbadmin/VMart",
    "port": "5433",
    "restartpolicy": "ksafe",
    "status": "UP"
  },
  "href": "/databases/VMart",
  "links": [
    "/configuration",
    "/hosts",
    "/license",
    "/nodes",
    "/process",
    "/rebalance/process",
    "/status",
    "/wla/process"
  ],
  "mime-type": "application/vertica.database.json-v2"
}
```

PUT databases/:database_name

Creates a job to run the action specified by the *action* parameter against the database identified by *:database_name*. The *:database_name* is the value of the *name* field that the [GETdatabases](#) command returns.

Returns a job ID that you can use to determine the status of the job. See [GET jobs](#).

Resource URL

```
https://<NODE>:5444/databases/:database_name
```

Authentication

Requires a [VerticaAPIKey](#) in the request header.

The API key must have **normal** level security or higher.

Parameters

user_id	A database username.
passwd	A password for the username.
action	Can be one of the following values: <ul style="list-style-type: none">• start — Start the database.• stop — Stop the database.• rebalance — Rebalance the database.• wla — Run Work Load Analyzer against the database.

Example Request

PUT	<pre>https://<NODE>:5444/databases/testDB?user_id=dbadmin"&"passwd=vertica"&"action=stop</pre>
-----	--

Response:

```
{  
  "id": "StopDatabase-testDB-2014-07-20 13:28:49.321744",  
  "url": "/jobs/StopDatabase-testDB-2014-07-20 13:28:49.321744"  
}
```

DELETE databases/:database_name

Creates a job to delete (drop) an existing database on the cluster. To perform this operation, you must first stop the database. The `:database_name` is the value of the `name` field that the [GETdatabases](#) command returns.

Returns a job ID that you can use to determine the status of the job. See [GET jobs](#).

Resource URL

```
https://<NODE>:5444/databases/:database_name
```

Authentication

Requires a [VerticaAPIKey](#) in the request header.

The API key must have **admin** level security.

Parameters

None.

Example Request

DELETE	<pre>https://<NODE>:5444/databases/TestDB</pre>
---------------	---

Response:

```
{
  "id": "DropDatabase-TestDB-2014-07-18 12:50:33.332383",
  "url": "/jobs/DropDatabase-TestDB-2014-07-18 12:50:33.332383"
}
```

GET databases/:database_name/configuration

Returns a list of configuration parameters for the database identified by :database_name. The :database_name is the value of the *name* field that the [GETdatabases](#) command returns.

Resource URL

```
https://<NODE>:5444/databases/:database_name/configuration
```

Authentication

Requires a [VerticaAPIKey](#) in the request header.

The API key must have **restricted** level security or higher.

Parameters

user_id	A database username.
passwd	The password for the username.

Example Request

GET	<pre>https://<NODE>:5444/databases/testDB/configuration</pre>
------------	---

Response:

This API call returns over 100 configuration parameters.. The following response is a small subset of the total amount returned.

```
[
  {
    "catalog_value": "1",
    "change_requires_restart": "f",
    "change_under_support_guidance": "f",

    "parameter_name": "TransactionIsolationLevel",
    "source": "DEFAULT"
  }
]
```

PUT databases/:database_name/configuration

Sets one or more configuration parameters for the database identified by :database_name. The :database_name is the value of the *name* field that the [GETdatabases](#) command returns.

Returns the parameter name, the requested value, and the result of the attempted change (Success or Failed).

Resource URL

```
https://<NODE>:5444/databases/:database_name/configuration
```

Authentication

Requires a [VerticaAPIKey](#) in the request header.

The API key must have **admin** level security.

Parameters

<i>user_id</i>	A database username.
<i>passwd</i>	The password for the username.
<i>parameter_name</i>	A parameter name and value combination for the parameter to be changed. Values must be URL encoded. You can include multiple name/value pairs to set multiple parameters with a single API call.

Example Request

PUT	<pre>https://<NODE>:5444/databases/testDB/configuration?user_id=dbadmin"&"passwd=vertica "&"JavaBinaryForUDx=%2Fusr%2Fbin%2Fjava"&"TransactionIsolationLevel=SERIALIZABLE</pre>
------------	---

Response:

```
[
  {
    "key": "JavaBinaryForUDx",
    "result": "Success",
    "value": "/usr/bin/java"
```

```
  },  
  {  
    "key": "TransactionIsolationLevel",  
    "result": "Success",  
    "value": "SERIALIZABLE"  
  }  
]
```

GET databases/:database_name/hosts

Returns the hostname/IP address, node name, and UP/DOWN status of each host associated with the database identified by :database_name. The :database_name is the value of the *name* field that the [GETdatabases](#) command returns.

Resource URL

```
https://<NODE>:5444/databases/:database_name/hosts
```

Authentication

Requires a [VerticaAPIKey](#) in the request header.

The API key must have **restricted** level security or higher.

Parameters

None.

Example Request

GET	<pre>https://<NODE>:5444/databases/VMart/hosts</pre>
------------	--

Response:

```
{
  "body": [
    {
      "hostname": "10.20.100.247",
      "nodename": "v_vmart_node0001",
      "status": "UP",
      "ts": "2014-07-18T13:12:31.904191"
    },
    {
      "hostname": "10.20.100.248",
      "nodename": "v_vmart_node0002",
      "status": "UP",
      "ts": "2014-07-18T13:12:31.904209"
    },
    {
      "hostname": "10.20.100.249",
      "nodename": "v_vmart_node0003",
      "status": "UP",

```

```
    "ts": "2014-07-18T13:12:31.904215"  
  }  
],  
"href": "/databases/VMart/hosts",  
"links": [],  
"mime-type": "application/vertica.hosts.json-v2"  
}
```

POST databases/:database_name/hosts

Creates a job to add a host to the database identified by :database_name. This host must already be part of the cluster. The :database_name is the value of the *name* field that the [GETdatabases](#) command returns.

Returns a job ID that you can use to determine the status of the job. See [GET jobs](#).

Resource URL

```
https://<NODE>:5444//:database_name/hosts
```

Authentication

Requires a [VerticaAPIKey](#) in the request header.

The API key must have **admin** level security.

Parameters

user_id	A database username.
passwd	The password for the username.
hostname	The hostname to add to the database. This host must already be part of the cluster.

Example Request

POST	<pre>https://<NODE>:5444/databases/testDB/hosts?hostname=192.168.232.181&user_id=dbadmin"&"passwd=vertica</pre>
-------------	---

Response:

```
{
  "id": "AddHostToDatabase-testDB-2014-07-20 12:24:04.088812",
  "url": "/jobs/AddHostToDatabase-testDB-2014-07-20 12:24:04.088812"
}
```

DELETE databases/:database_name/hosts/:host_id

Creates a job to remove the host identified by `:host_id` from the database identified by `:database_name`. The `:database_name` is the value of the `name` field that the [GETdatabases](#) command returns. The `:host_id` is the value of the `host` field returned by [GETdatabases/:database_name](#).

Returns a job ID that you can use to determine the status of the job. See [GET jobs](#).

Resource URL

```
https://<NODE>:5444/databases/:database_name/hosts/:host_id
```

Authentication

Requires a [VerticaAPIKey](#) in the request header.

The API key must have **admin** level security.

Parameters

user_id	A database username.
passwd	A password for the username.

Example Request

DELETE	<pre>https://<NODE>:5444/databases/testDB/hosts/192.168.232.181?user_id=dbadmin"&"passwd=vertica</pre>
---------------	--

Response:

```
{
  "id": "RemoveHostFromDatabase-testDB-2014-07-20 13:41:15.646235",
  "url": "/jobs/RemoveHostFromDatabase-testDB-2014-07-20 13:41:15.646235"
}
```

POST databases/:database_name/hosts/:host_id/process

Creates a job to start the vertica process for the database identified by :database_name on the host identified by :host_id. The :database_name is the value of the *name* field that the [GETdatabases](#) command returns. The :host_id is the value of the *host* field returned by [GETdatabases/:database_name](#).

Returns a job ID that you can use to determine the status of the job. See [GET jobs](#).

Resource URL

```
https://<NODE>:5444/:database_name/hosts/:host_id/process
```

Authentication

Requires a [VerticaAPIKey](#) in the request header.

The API key must have **restricted** level security or higher.

Parameters

None.

Example Request

POST	<pre>https://<NODE>:5444/databases/testDB/hosts/192.168.232.181/process</pre>
-------------	---

Response:

```
{
  "id": "StartDatabase-testDB-2014-07-20 13:14:03.968340",
  "url": "/jobs/StartDatabase-testDB-2014-07-20 13:14:03.968340"
}
```

GET databases/:database_name/license

Returns details about the database license being used by the database identified by :database_name. The :database_name is the value of the *name* field that the [GETdatabases](#) command returns.

Resource URL

```
https://<NODE>:5444/:database_name/license
```

Authentication

Requires a [VerticaAPIKey](#) in the request header.

The API key must have **restricted** level security or higher.

Parameters

user_id	A database username.
passwd	The password for the username.

Example Request

GET	https://<NODE>:5444/VMart/license
-----	-----------------------------------

Response:

```
{
  "body": {
    "details": {
      "assigned_to": "Vertica Systems, Inc.",
      "grace_period": 0,
      "is_ce": false,
      "is_unlimited": false,
      "name": "vertica",
      "not_after": "Perpetual",
      "not_before": "2007-08-03"
    },
    "last_audit": {
      "audit_date": "2014-07-18 13:49:22.530105-04",
      "database_size_bytes": "814060522",

```

```
        "license_size_bytes": "536870912000",  
        "usage_percent": "0.00151630588248372"  
    }  
},  
"href": "/databases/VMart/license",  
"links": [],  
"mime-type": "application/vertica.license.json-v2"  
}
```

GET databases/:database_name/licenses

Returns details about all license being used by the database identified by :database_name. The :database_name is the value of the *name* field that the [GETdatabases](#) command returns.

Resource URL

```
https://<NODE>:5444/:database_name/licenses
```

Authentication

Requires a [VerticaAPIKey](#) in the request header.

The API key must have **restricted** level security or higher.

Parameters

user_id	A database username.
passwd	The password for the username.

Example Request

GET	<pre>https://<NODE>:5444/VMart/licenses</pre>
------------	---

Response:

```
{
  "body": [
    {

],
"href": "/databases/VMart/licenses",
"links": [],
"mime-type": "application/vertica.features.json-v2"
}
```

DELETE databases/:database_name/hosts/:host_id/process

Creates a job to stop the vertica process for the database identified by :database_name on the host identified by :host_id. The :database_name is the value of the *name* field that the [GETdatabases](#) command returns. The :host_id is the value of the *host* field returned by [GETdatabases/:database_name](#).

Returns a job ID that can be used to determine the status of the job. See [GET jobs](#).

Note: If stopping the database on the hosts causes the database to no longer be k-safe, then the all database nodes may shut down.

Resource URL

```
https://<NODE>:5444/databases/:database_name/hosts/:host_id/process
```

Authentication

Requires a [VerticaAPIKey](#) in the request header.

The API key must have **restricted** level security or higher.

Parameters

None.

Example Request

DELETE	<pre>https://<NODE>:5444/databases/testDB/hosts/192.168.232.181/process</pre>
---------------	---

Response:

```
{
  "id": "StopDatabase-testDB-2014-07-20 13:02:08.453547",
  "url": "/jobs/StopDatabase-testDB-2014-07-20 13:02:08.453547"
}
```

POST databases/:database_name/hosts/:host_id/replace_with/:host_id_new

Creates a job to replace the host identified by `hosts/:host_id` with the host identified by `replace_with/:host_id`. Vertica performs these operations for the database identified by `:database_name`. The `:database_name` is the value of the *name* field that the [GETdatabases](#) command returns. The `:host_id` is the value of the *host* field as returned by [GET databases/:database_name](#). You can find valid replacement hosts using [GET hosts](#). The replacement host cannot already be part of the database. You must stop the vertica process on the host being replaced.

Returns a job ID that you can use to determine the status of the job. See [GET jobs](#).

Resource URL

```
https://<NODE>:5444/databases/:database_name/hosts/:host_id/replace_with/:host_id_new
```

Authentication

Requires a [VerticaAPIKey](#) in the request header.

The API key must have **admin** level security.

Parameters

user_id	A database username.
passwd	A password for the username.

Example Request

POST	<pre>https://<NODE>:5444/databases/testDB/hosts/192.168.232.180/replace_with/192.168.232.181?user_id=dbadmin"&"passwd=vertica</pre>
-------------	---

Response:

```
{
  "id": "ReplaceNode-testDB-2014-07-20 13:50:28.423509",
  "url": "/jobs/ReplaceNode-testDB-2014-07-20 13:50:28.423509"
```

```
}
```

GET databases/:database_name/nodes

Returns a comma-separated list of node IDs for the database identified by :database_name. The :database_name is the value of the *name* field that the [GETdatabases](#) command returns.

Resource URL

```
https://<NODE>:5444/:database_name/nodes
```

Authentication

Requires a [VerticaAPIKey](#) in the request header.

The API key must have **restricted** level security or higher.

Parameters

None.

Example Request

GET	<pre>https://<NODE>:5444/VMart/nodes</pre>
------------	--

Response:

```
[
  {
    "database_id": "VMart",
    "node_id": "v_vmart_node0001,v_vmart_node0002,v_vmart_node0003",
    "status": "Unknown"
  }
]
```

GET databases/:database_name/nodes/:node_id

Returns details about the node identified by :node_id. The :node_id is one of the node IDs returned by [GET databases/:database_name/nodes](#).

Resource URL

```
https://<NODE>:5444/:database_name/nodes/:node_id
```

Authentication

Requires a [VerticaAPIKey](#) in the request header.

The API key must have **restricted** level security or higher.

Parameters

None.

Example Request

GET	<pre>https://<NODE>:5444/databases/VMart/nodes/v_vmart_node0001</pre>
------------	---

Response:

```
{
  "db": "VMart",
  "host": "10.20.100.247",
  "name": "v_vmart_node0001",
  "state": "UP"
}
```

POST databases/:database_name/process

Creates a job to start the database identified by :database_name. The :database_name is the value of the *name* field that the [GETdatabases](#) command returns.

Returns a job ID that can be used to determine the status of the job. See [GET jobs](#).

Resource URL

```
https://<NODE>:5444/databases/:database_name/process
```

Authentication

Requires a [VerticaAPIKey](#) in the request header.

The API key must have **restricted** level security or higher.

Parameters

epoch	Start the database from this epoch.
include	Include only these hosts when starting the database. Use a comma-separated list of hostnames.

Example Request

POST	<pre>https://<NODE>:5444/databases/:testDB/process</pre>
-------------	--

An example of the full request using cURL:

```
curl -X POST -H "VerticaApiKey: ValidAPIKey" https://<NODE>:5444/:testDB/process
```

Response:

```
{
  "id": "StartDatabase-testDB-2014-07-20 12:41:46.061408",
  "url": "/jobs/StartDatabase-testDB-2014-07-20 12:41:46.061408"
}
```

GET databases/:database_name/process

Returns a state of UP or DOWN for the database identified by :database_name. The :database_name is the value of the *name* field that the [GETdatabases](#) command returns.

Resource URL

```
https://<NODE>:5444/databases/:database_name/process
```

Authentication

Requires a [VerticaAPIKey](#) in the request header.

The API key must have **restricted** level security or higher.

Parameters

None.

Example Request

GET	<pre>https://<NODE>:5444/databases/VMart/process</pre>
------------	--

Response:

```
{  
  "state": "UP"  
}
```

DELETE databases/:database_name/process

Creates a job to stop the database identified by :database_name. The :database_name is the value of the *name* field that the [GETdatabases](#) command returns.

Returns a job ID that you can use to determine the status of the job. See [GET jobs](#).

Resource URL

```
https://<NODE>:5444/databases/:database_name/process
```

Authentication

Requires a [VerticaAPIKey](#) in the request header.

The API key must have **restricted** level security or higher.

Parameters

user_id	A database username.
passwd	The password for the username.

Example Request

DELETE	<pre>https://<NODE>:5444/databases/testDB/process?user_id=dbadmin"&"passwd=vertica</pre>
---------------	--

An example of the full request using cURL:

```
curl -X DELETE -H "VerticaApiKey: ValidAPIKey" https://<NODE>:5444/:testDB/process?user_id=dbadmin"&"passwd=vertica
```

Response:

```
{
  "id": "StopDatabase-testDB-2014-07-20 12:46:04.406637",
  "url": "/jobs/StopDatabase-testDB-2014-07-20 12:46:04.406637"
}
```

POST databases/:database_name/rebalance/process

Creates a job to run a rebalance on the database identified by host identified by : database_name. The :database_name is the value of the *name* field that the [GETdatabases](#) command returns.

Returns a job ID that you can use to determine the status of the job. See [GET jobs](#).

Resource URL

```
https://<NODE>:5444/databases/:database_name/rebalance/process
```

Authentication

Requires a [VerticaAPIKey](#) in the request header.

The API key must have **restricted** level security or higher.

Parameters

user_id	A database username.
passwd	A password for the username.

Example Request

POST	<pre>https://<NODE>:5444/databases/testDB/rebalance/process</pre>
-------------	---

Response:

```
{
  "id": "RebalanceData-testDB-2014-07-20 21:42:45.731038",
  "url": "/jobs/RebalanceData-testDB-2014-07-20 21:42:45.731038"
}
```

POST databases/:database_name/wla/process

Creates a job to run Workload Analyzer on the database identified by host identified by :database_name. The :database_name is the value of the *name* field that the [GETdatabases](#) command returns.

Returns a job ID that you can use to determine the status of the job. See [GET jobs](#).

Resource URL

```
https://<NODE>:5444/databases/:database_name/wla/process
```

Authentication

Requires a [VerticaAPIKey](#) in the request header.

The API key must have **restricted** level security or higher.

Parameters

user_id	A database username.
passwd	A password for the username.

Example Request

POST	<pre>https://<NODE>:5444/databases/testDB/wla/process</pre>
-------------	---

Response:

```
{
  "id": "AnalyzeWorkLoad-testDB-2014-07-20 21:48:27.972989",
  "url": "/jobs/AnalyzeWorkLoad-testDB-2014-07-20 21:48:27.972989"
}
```

Hosts

You can use these API calls to get information on the hosts in your cluster.

GET hosts	Returns a list of hosts in this cluster.
GET hosts/:hostid	Returns details for a specific host in this cluster.

GET hosts

Returns a list of the hosts in the cluster and the hardware, software, and network details about each host.

Resource URL

```
https://<NODE>:5444/hosts
```

Authentication

Requires a [VerticaAPIKey](#) in the request header.

The API key must have **restricted** level security or higher.

Parameters

None.

Example Request

GET	<pre>https://<NODE>:5444/hosts</pre>
------------	--

Response:

```

"mime-type": "application/vertica.hosts.json-v2"
}
```

GET hosts/:hostid

Returns hardware, software, and network details about the host identified by `:host_id`. You can find `:host_id` for each host using [GET hosts](#).

Resource URL

```
https://<NODE>:5444/hosts/:hostid
```

Authentication

Requires a [VerticaAPIKey](#) in the request header.

The API key must have **restricted** level security or higher.

Parameters

None.

Example Request

GET	<pre>https://<NODE>:5444/hosts/10.20.100.247</pre>
------------	--

Response:

```
{
  "body": {
    "cpu_info": {
      "cpu_type": " Intel(R) Xeon(R) CPU E5-2695 v2 @ 2.40GHz",

        "netmask": "255.255.255.0",
        "speed": "unknown"
      },
      {
        "broadcast": "255.255.255.255",
        "ipaddr": "127.0.0.1",

```

```
        "name": "lo",
        "netmask": "255.0.0.0",
        "speed": "loallink"
      }
    ],
    "total_memory": 3833,
    "vertica": {
      "arch": "x86_64",
      "brand": "vertica",
      "release": "20140716",
      "version": "8.1.0"
    }
  },
  "href": "/hosts/10.20.100.247",
  "links": [],
  "mime-type": "application/vertica.host.json-v2"
}
```

Jobs

You can use these API calls to get information on your database's jobs.

GET jobs	Returns a list of jobs the agent is tracking, along with their current status and exit codes.
GET jobs/:id	Returns the details (the saved output) for a specific job.

GET jobs

Returns a list of jobs being tracked by the agent and job details.

Jobs always start immediately. The `is_running` field is a Boolean value. If `is_running` is false, then the job is complete.

The `exit_code` details the status of the job. The `exit_code` is different for certain types of jobs:

- For Backup jobs:
 - 0 indicates success.
 - Any other number indicates a failure.
- For all other jobs:
 - -9 indicates success.
 - Any other number indicates a failure.

You can see details about failures in `/opt/vertica/log/agentStdMsg.log`.

Resource URL

```
https://<NODE>:5444/jobs
```

Authentication

Requires a [VerticaAPIKey](#) in the request header.

The API key must have **restricted** level security or higher.

Parameters

None.

Example Request

GET	<pre>https://<NODE>:5444/jobs</pre>
------------	---

Response:

```
{
  "body": [
    {
      "exit_code": 0,
      "id": "CreateBackup-VMart-1405012447.75",
      "is_running": false,
      "status": "unused",
      "ts": "1405012461.18"
    },
    {
      "exit_code": 1,
      "id": "CreateBackup-VMart-1405012454.88",
      "is_running": false,
      "status": "unused",
      "ts": "1405012455.18"
    }
  ],
  "href": "/jobs",
  "links": [
    "/:jobid"
  ],
  "mime-type": "application/vertica.jobs.json-v2"
}
```

GET jobs/:id

Gets the details for a specific job with the provided `:id`. You can determine the list of job `ids` using [GET jobs](#).

Details for a specific job are the same as the details provided for all jobs by [GET jobs](#).

Note: You must URL encode the `:id` as some IDs may contain spaces or other special characters.

Resource URL

```
https://<NODE>:5444/jobs/:id
```

Authentication

Requires a [VerticaAPIKey](#) in the request header.

The API key must have **restricted** level security or higher.

Parameters

None.

Example Request

GET	<pre>https://<NODE>:5444/jobs/CreateBackup-VMart-1405012454.88</pre>
-----	--

Licenses

You can use these API calls to manage licenses for your database.

POST licenses	Uploads and applies a new license to this cluster.
GET licenses	Returns the license field that databases created on this cluster use.

POST licenses

Uploads and applies a license file to this cluster.

You must provide the license file as an HTTP POST form upload, identified by the name *license*. For example, you can use cURL:

```
curl -k --request POST -H "VerticaApiKey:ValidAPIKey" \  
https://v_vmart_node0001:5444/licenses --form "license=@vlicense.dat"
```

Resource URL

https://<NODE>:5444/licenses

Authentication

Requires a [VerticaAPIKey](#) in the request header.

The API key must have **admin** level security.

Parameters

None.

Example Request

POST	https://<NODE>:5444/licenses
-------------	------------------------------

Response:

There is no HTTP body response for successful uploads. A successful upload returns an HTTP 200/OK header.

GET licenses

Returns any license files that are used by this cluster when creating databases. License files must reside in `/opt/vertica/config/share`.

Resource URL

```
https://<NODE>:5444/licenses
```

Authentication

Requires a [VerticaAPIKey](#) in the request header.

The API key must have **restricted** level security or higher.

Parameters

None.

Example Request

GET	<pre>https://<NODE>:5444/licenses</pre>
------------	---

Response:

```
{
  "body": [
    {
      "comment": "Vertica license is valid",
      "end": "Perpetual",
      "grace": "0",
      "size": "1TB CE Nodes 3",
      "start": "2011-11-22",
      "status": true,
      "vendor": "Vertica Community Edition"
    }
  ],
  "href": "/license",
  "links": [],
  "mime-type": "application/vertica.license.json-v2"
}
```

Nodes

You can use these API calls to retrieve information on the nodes in your cluster.

GET nodes	Returns a list of nodes in this cluster.
GET nodes/:nodeid	Returns details for a specific node in this cluster.

GET nodes

Returns a list of nodes associated with this cluster.

Resource URL

```
https://<NODE>:5444/nodes
```

Authentication

Requires a [VerticaAPIKey](#) in the request header.

The API key must have **restricted** level security or higher.

Parameters

None.

Example Request

GET	<pre>https://<NODE>:5444/nodes</pre>
------------	--

Response:

```
{
  "body": [
    "node0001",
    "node0002",
    "node0003",
    "v_testdb_node0001",
    "v_testdb_node0002",
    "v_testdb_node0003",
    "v_vmart_node0001",
    "v_vmart_node0002",
    "v_vmart_node0003"
  ],
  "href": "/nodes",
  "links": [
    "/:nodeid"
  ],
  "mime-type": "application/vertica.nodes.json-v2"
}
```

GET nodes/:nodeid

Returns details about the node identified by :node_id. You can find the :node_id for each node using [GET nodes](#).

In the body field, the following information is detailed in comma-separated format:

- Node Name
- Host Address
- Catalog Directory
- Data Directory

Resource URL

```
https://<NODE>:5444/nodes/:node_id
```

Authentication

Requires a [VerticaAPIKey](#) in the request header.

The API key must have **restricted** level security or higher.

Parameters

None.

Example Request

GET	<pre>https://<NODE>:5444/nodes/v_vmart_node0001</pre>
------------	---

Response:

```
{
  "body": [
    "v_vmart_node0001",
    "10.20.100.247,/home/dbadmin,/home/dbadmin"
  ],
  "href": "/nodes/v_vmart_node0001",
  "links": [],
}
```

```
}  "mime-type": "application/vertica.node.json-v2"
```

Webhooks

You can use these API calls to obtain information on, create, or delete webhooks.

GET webhooks	Returns a list of active webhooks.
POST webhooks/subscribe	Creates a new webhook.
DELETE webhooks/:subscriber_id	Deletes an existing webhook.

GET webhooks

Returns a list of active webhooks for this cluster.

Resource URL

```
https://<NODE>:5444/webhooks
```

Authentication

Requires a [VerticaAPIKey](#) in the request header.

The API key must have **restricted** level security or higher.

Parameters

None.

Example Request

GET	<pre>https://<NODE>:5444/webhooks</pre>
------------	---

Response:

```
{
  "body": [
    {
      "host": "192.168.232.1",
      "id": "79c1c8a18be02804b3d2f48ea6462909",
      "port": 80,
      "timestamp": "2014-07-20 22:54:09.829642",
      "url": "/gettest.htm"
    },
    {
      "host": "192.168.232.1",
      "id": "9c32cb0f3d2f9a7cb10835f1732fd4a7",
      "port": 80,
      "timestamp": "2014-07-20 22:54:09.829707",
      "url": "/getwebhook.php"
    }
  ],
  "href": "/webhooks",
  "links": [
    "/subscribe",
    "/:subscriber_id"
  ]
}
```

```
  ],  
  "mime-type": "application/vertica.webhooks.json-v2"  
}
```

POST webhooks/subscribe

Creates a subscription for a webhook.

Resource URL

```
https://<NODE>:5444/webhooks/subscribe
```

Authentication

Requires a [VerticaAPIKey](#) in the request header.

The API key must have **restricted** level security or higher.

Parameters

url	A URL to an application that accepts JSON messages from this cluster.
-----	---

Example Request

POST	<pre>https://<NODE>:5444/webhooks/subscribe?url=http%3A%2F%2Fexample.com%2Fgetwebhook.php</pre>
-------------	---

Response:

The response is not JSON encoded. The only text response is the ID of the webhook subscription. Additionally, an HTTP 200/OK header indicates success.

```
79c1c8a18be02804b3d2f48ea6462909
```

DELETE webhooks/:subscriber_id

Deletes the webhook identified by `:subscriber_id`. The `:subscriber_id` is the value of the `id` field that the [GET webhooks](#) command returns.

Resource URL

```
https://<NODE>:5444/webhooks/:subscriber_id
```

Authentication

Requires a [VerticaAPIKey](#) in the request header.

The API key must have **restricted** level security or higher.

Parameters

None.

Example Request

DELETE	<pre>https://<NODE>:5444/webhooks/79c1c8a18be02804b3d2f48ea6462909</pre>
---------------	--

Response:

There is no HTTP body response for successful deletes. A successful delete returns an HTTP 200/OK header.

Rest APIs for the Management Console

These API calls interact with Management Console nodes.

Alerts

GET alerts	Returns alerts for the current user.
----------------------------	--------------------------------------

Time Information

GET <code>mcTimeInfo</code>	Returns the current time for the MC server and the timezone of the location where the MC server is located.
---------------------------------------	---

MC-User-ApiKey

The MC-User-ApiKey is a user-specific key used with Management Console. Users must have an MC-User-ApiKey to interact with MC using the Rest API. All users with roles other than None automatically receive an MC-User-ApiKey.

This key grants users the same rights through the API that they have available through their MC roles. To interact with the MC, users pass the key in the request header for the API.

View the MC-User-ApiKey

If you are the database administrator, you can view the MC-User-ApiKey for all users. Individual users can view their own keys.

1. Connect to MC and go to MC Settings > User Management.
2. Select the user to view and click Edit. The user's key appears in the User API Key field.

GET alerts

Returns a list of MC alerts, their current status, and database properties.

Resource URL

```
https://<MC_NODE>:5450/webui/api/alerts
```

Authentication

Requires an [MC-User-Apikey](#) in the request header.

Filter Parameters

types	<p>The type of alert to retrieve. Valid values are:</p> <ul style="list-style-type: none">• info• notice• warning• error• critical• alert• emergency
category	<p>For information, see Thresholds Category Filter.</p>
db_name	<p>For information, see Database Name Category Filter.</p>
limit	<p>The maximum number of alerts to retrieve. If the limit is lower than the number of existing alerts, Vertica retrieves the most recent alerts. Used with the type parameter, Vertica retrieves up to the limit for each type. For example, for a limit of five and types of critical and emergency, you could receive up to ten total alerts.</p>
time_from	<p>The timestamp start point from which to retrieve alerts. You can use this parameter in combination with the time_to parameter to retrieve alerts for a specific time range. Values must be passed in the following format: <code>yyyy-MM-ddTHH:mm</code>.</p> <p>If you provide only the time_from parameter, and omit the time_to parameter, the response contains all alerts generated from the time_from parameter to the current time.</p>
time_to	<p>The timestamp end point from which to retrieve alerts. You can use this</p>

parameter in combination with the `time_from` parameter to retrieve alerts for a specific time range. Values must be passed in the following format: `yyyy-MM-ddTHH:mm`.

If you provide only the `time_to` parameter, and omit the `time_from` parameter, the response contains all alerts generated from the earliest possible time to the time passed in `time_to`.

Example Request

GET

```
https://<MC_NODE>:5450/webui/api/alerts
```

Request Alerts Using cURL

This example shows how you can request alerts using cURL. In this example, the `limit` parameter is set to '2' and the `types` parameters is set to `info` and `notice`:

```
curl -H "MC-User-APIKey: ValidUserKey" https://<MC_NODE>:5450/webui/api/alerts?limit=2&types=info,notice
```

Response:

```
[
  {
    "alerts": [
      {
        "id": 5502,
        "markedRead": false,
        "eventTypeCode": 0,
        "create_time": "2016-02-02 05:12:10.0",
        "updated_time": "2016-02-02 15:50:20.511",
        "severity": "warning",
        "status": 1,
        "nodeName": "v_vmart_node0001",
        "databaseName": "VMart",
        "databaseId": 1,
        "clusterName": "1449695416208_cluster",
        "description": "Warning: Low disk space detected (73% in use)",
        "summary": "Low Disk Space",
        "internal": false,
        "count": 3830
      },
      {
        "id": 5501,
        "markedRead": false,
        "eventTypeCode": 2,
        "create_time": "2016-02-02 05:12:02.31",
        "updated_time": "2016-02-02 05:12:02.31",
      }
    ]
  }
]
```

```
    "severity": "notice",
    "status": 1,
    "databaseName": "VMart",
    "databaseId": 1,
    "clusterName": "1449695416208_cluster",
    "description": "Analyze Workload operation started on Database",
    "summary": "Analyze Workload operation started on Database",
    "internal": false,
    "count": 1
  }
],
"total_alerts": 190,
"request_query": "limit=2",
"request_time": "2016-02-02 15:50:26 -0500"
}
]
```

Request Alerts Within a Time Range

These examples show various ways in which you can request the same alert as in the preceding example, but within specified time ranges.

Request the alert within a specific time range, using the `time_from` and `time_to` parameters:

```
curl -H "MC-User-ApiKey: ValidUserKey" https://<MC_
NODE>:5450/webui/api/alerts?types=info,notice&time_from=2016-01-01T12:12&time_to=2016-02-01T12:12
```

Request the alert from a specific start time to the present using the `time_from` parameter:

```
curl -H "MC-User-ApiKey: ValidUserKey" https://<MC_
NODE>:5450/webui/api/alerts?types=info,notice&time_from=2016-01-01T12:12
```

Request the alert to a specific end point using the `time_to` parameter. When you use the `time_to` parameter without the `time_from` parameter, the `time_from` parameter defaults to the oldest alerts your MC contains:

```
curl -H "MC-User-ApiKey: ValidUserKey" https://<MC_
NODE>:5450/webui/api/alerts?types=info,notice&time_to=2016-01-01T12:12
```

GET mcTimeInfo

Returns the current time for the MC server and the timezone where the MC server is located.

Resource URL

```
https://<MC_NODE>:5450/webui/api/mcTimeInfo
```

Authentication

Requires an [MC-User-Apikey](#) in the request header.

Parameters

None.

Example Request

GET	<code>https://<MC_NODE>:5450/webui/api/mcTimeInfo</code>
-----	--

This example shows how you can request MC time information using cURL:

```
curl -H "MC-User-ApiKey: ValidUserKey" https://<MC_NODE>:5450/webui/api/mcTimeInfo
```

Response:

```
{"mc_current_time":"Tue, 2000-01-01 01:02:03 -0500","mc_timezone":"US/Eastern"}
```

Thresholds Category Filter

Returns a list of alerts related to threshold settings in MC.

Resource URL

```
https://<MC_NODE>:5450/webui/api/alerts?category=thresholds
```

Authentication

Requires an [MC-User-Apikey](#) in the request header.

Example Request

GET

```
https://<MC_NODE>:5450/webui/api/alerts?category=thresholds
```

This example shows how you can request alerts on thresholds using cURL:

```
curl -H "MC-User-ApiKey: ValidUserKey" https://<MC_NODE>:5450/webui/api/alerts?category=thresholds
```

Response:

```
[
  {
    "alerts": [

Combining Sub-Category Filters with Category Filters

You can combine category filters with sub-category filters, to obtain alert messages for specific thresholds you set in MC. You can also use sub-category filters to obtain information about alerts on specific resource pools in your database.

Sub-Category Filters

You can use the following sub-category filters with the category filters. Sub-category filters are case sensitive and must be lowercase.

Sub-Category Filter	Alerts Related to Threshold Value Set For:
threshold_node_cpu	Node CPU
threshold_node_memory	Node Memory
threshold_node_disk_usage	Node Disk Usage
threshold_node_diskio	Node Disk I/O
threshold_node_cpuio	Node CPU I/O Wait
threshold_node_rebootrate	Node Reboot Rate
threshold_netio	Network I/O Error
threshold_query_queued	Queued Query Number
threshold_query_failed	Failed Query Number
threshold_query_spilled	Spilled Query Number
threshold_query_retried	Retried Query Number
threshold_query_runtime	Query Running Time

Resource Pool-Specific Sub-Category Filters

To retrieve alerts for a specific resource pool, you can use sub-category filters in combination with the following category filters:

- `thresholds`
- `rp_name`

If you use these sub-category filters without the `rp_name` filter, the query retrieves alerts for all resource pools in your database.

Sub-Category Filter	Alerts Related to Threshold Value Set For:
<code>threshold_rp_query_max_time</code>	Queries reaching the maximum allowed execution time.
<code>threshold_rp_query_resource_reject</code>	The number of queries with resource rejections.
<code>threshold_rp_query_queue_time</code>	The number of queries that ended because of queue time exceeding a limit.
<code>threshold_rp_query_run_time</code>	The number of queries that ended because of run time exceeding a limit.
<code>threshold_rp_memory</code>	The minimum allowed resource pool size.
<code>threshold_rp_max_memory</code>	The maximum allowed resource pool size.

Authentication

Requires an [MC-User-Apikey](#) in the request header.

Example Request

GET	<pre>https://<MC_NODE>:5450/webui/api/alerts?category=thresholds&subcategory=<subcategory_filter></pre>
-----	---

Combine the Thresholds Category Filter with a Sub-Category Filter

This example shows how you can request alerts using cURL with the thresholds category filter and a sub-category filter. You apply the following filters:

- thresholds
- threshold_node_cpu

```
curl -H "MC-User-APIKey: ValidUserKey" https://<MC_
NODE>:5450/webui/api/alerts?category=thresholds&subcategory=threshold_node_cpu
```

Response:

```

Using Vertica on the Cloud

Welcome to the Vertica on the Cloud guide. This section explains how you can create Vertica clusters on different cloud platforms.

This document assumes that you are familiar with the cloud environment on which you will create your Vertica cluster.

Note: The cloud versions of Vertica are released shortly after the Enterprise version. Please check the Vertica version listed on your cloud provider to confirm which version of Vertica on the Cloud you are using.

Vertica on Amazon Web Services

Welcome to the Vertica on Amazon Web Services (AWS) guide. This section explains how you can create and manage Vertica clusters on AWS.

In This Section

Overview of Vertica on Amazon Web Services (AWS)

Vertica clusters on AWS operate on Amazon Machine Instances (AMI). The instructions in this document apply to AMIs built with Vertica Version 8.1.x.

Key Topics

The following are links to key topics within the Vertica on AWS documentation:

- If you created a standard 3 node cluster using a cloud formation template and are looking for information about how to connect, visit [Connecting to an Instance](#).
- If you have a running cluster, and want to add nodes to it, visit [Adding Nodes to a Running AWS Cluster](#).
- If you are looking for information about backup and restore operations, visit [Backup and Restore Vertica on AWS](#).

Supported Instance Types

Vertica supports a range of Amazon Web Services (AWS) instance types, each optimized for different purposes. Choose the instance type that best matches your performance and price needs as a user:

Optimization	Type
General Purpose	m4.4xlarge m4.10xlarge
Compute	c3.4xlarge c3.8xlarge c4.4xlarge c4.8xlarge
Memory	r3.4xlarge r3.8xlarge r4.4xlarge r4.8xlarge r4.16xlarge
Storage (supports ephemeral storage)	i2.4xlarge i2.8xlarge
Dense-storage (supports ephemeral storage)	d2.4xlarge d2.8xlarge

Note: Data stored on the ephemeral drives of a storage-optimized instance exists only while that instance is powered on. After powering off a storage-optimized system, data on ephemeral drives is lost.

More Information

For more information about Amazon cluster instances and their limitations, see the [Amazon documentation](#).

Vertica AMI Operating Systems

Micro Focus International plc provides Vertica and Management Console (MC) AMIs in multiple operating systems.

Vertica AMIs are available in the following operating systems:

- Red Hat 7.3
- Centos 7.3

MC AMIs are available in the following operating systems:

- Red Hat 7.3
- Centos 7.3

Vertica AMI Sleep C-States

By default, the following instances have their processor C-states set to a value of 1 in the Vertica AMI:

- c4.8xlarge
- d2.8xlarge
- m4.10xlarge

This measure is meant to improve performance by limiting the sleep states an instance running Vertica will use.

More Information

For more information about sleep states, visit the [AWS Documentation](#).

EC2 Launch Options

You can create one or multi node Vertica clusters on EC2 instances. Search for Vertica in the [Amazon Marketplace](#) to view these launch options.

1-Click Launch

This option deploys a single-node Vertica AMI with default settings.

Manual Launch

This option deploys a single-node Vertica AMI or a 3-node Vertica cluster with more customizable options.

Service Catalog

This option deploys a single-node AMI or a multi-node cluster for an administrator to create and distribute to end users.

Supported Features

Vertica on AWS supports a number of Amazon features and comes with a number of pre installed Vertica packages.

Enhanced Networking

Vertica AMIs support the AWS enhanced networking feature. Micro Focus recommends you use Enhanced Networking for optimal performance.

For details, see [Enabling Enhanced Networking on Linux Instances in a VPC](#) in the AWS documentation .

Packages

Vertica AMIs come with the following Vertica packages pre-installed:

- [Vertica Place](#)
- [Vertica Pulse](#)

Command Line Interface

Vertica AMIs support Amazon Command Line Interface (CLI).

For information about the Amazon CLI, visit the [AWS Documentation](#).

Elastic Load Balancing

You can use elastic load balancing (ELB) for queries up to one hour. When enabling ELB, ensure that the timer is configured to 3600 seconds.

For information about ELB, refer to [Amazon documentation](#).

Configure Your Network

Before you create your cluster, you must configure the network on which Vertica will run. Vertica requires a number of specific network configurations to operate on AWS. You may also have specific network configuration needs beyond the default Vertica settings.

Configure the following Amazon EC2 features in preparation for instance creation:

- [Security Group](#)
- [Access Control List](#)
- [Key Pairs](#)
- [Placement Group](#)
- [Internet Gateway](#)
- [Elastic IP](#)
- [Virtual Private Cloud](#)

Creating a Placement Group

Create a placement group to ensure that your nodes will be properly co-located.

More Information

For information about what a placement group is, as well as how to create one, visit the [AWS documentation](#).

Creating a Key Pair

Use a key pair to perform the following:

- Authenticate your connection as dbadmin to your instances from outside your cluster.
- Install and configure Vertica on your AWS instances.

Create an AWS key pair.

More Information

For information about what a key pair is, as well as how to create one, visit the [AWS documentation](#).

Creating a Virtual Private Cloud

A Vertica cluster on AWS must be logically located in the same network. This is similar to placing the nodes of an on-premises cluster within the same network. Create a virtual private cloud (VPC) to ensure the nodes in your cluster will be able to communicate with each other within AWS.

Create a **Single Public Subnet** VPC with the following configurations:

- Assign a Network Access Control List (ACL) that is appropriate to your situation. [The default ACL](#) does not provide a high level of security.
- Enable DNS resolution and Enable DNS hostname support for instances launched in this VPC.
- Add the required [network inbound and outbound rules to the Network ACL associated to the VPC](#).

Note: A Vertica cluster must be operated within a single availability zone.

More Information

For information about a VPC, as well as how to create one, visit the [AWS documentation](#).

Network ACL Settings

Vertica requires the following basic network access control list (ACL) settings on an AWS instance running the Vertica AMI. Micro Focus recommends that you secure your network with additional ACL settings that are appropriate to your situation; the default ACL does not provide a high level of security.

Inbound Rules

Type	Protocol	Port Range	Use	Source	Allow/Deny
SSH	TCP (6)	22	SSH (Optional -- for access to your cluster from outside your VPC)	User Specific	Allow
Custom TCP Rule	TCP (6)	5450	MC (Optional -- for MC running outside of your VPC)	User Specific	Allow
Custom TCP Rule	TCP (6)	5433	SQL Clients (Optional -- for access to your cluster from SQL clients)	User Specific	Allow
Custom TCP Rule	TCP (6)	50000	Rsync (Optional -- for backup outside of your VPC)	User Specific	Allow
Custom TCP Rule	TCP (6)	1024-65535	Ephemeral Ports (Needed if you use any of the above)	User Specific	Allow
ALL Traffic	ALL	ALL	N/A	0.0.0.0/0	Deny

Outbound Rules

Type	Protocol	Port Range	Use	Source	Allow/Deny
Custom TCP Rule	TCP (6)	0 - 65535	Ephemeral Ports	0.0.0.0/0	Allow

You can use the entire port range specified in the table above, or find your specific ephemeral ports by entering the following command:

```
cat /proc/sys/net/ipv4/ip_local_port_range
```

More Information

For detailed information on network ACLs within AWS, refer to [Amazon's documentation](#).

For detailed information on ephemeral ports within AWS, refer to [Amazon's documentation](#).

Creating and Assigning an Internet Gateway

When you create a VPC, an internet gateway is automatically assigned to it. You can use that gateway, or you can assign your own. If you are using the default internet gateway, continue with the next procedure, [Creating a Security Group](#).

Otherwise, create an internet gateway specific to your needs. Associate your internet gateway with your VPC and subnet.

More Information

For information about what an internet gateway is, as well as how to create one, visit the [AWS documentation](#).

Assigning an Elastic IP

An elastic IP is an unchanging IP address that you can use to connect to your cluster externally. Micro Focus recommends you assign a single elastic IP to a node in your cluster. You can then connect to other nodes in your cluster from your primary node using their internal IP addresses dictated by your VPC settings.

Create an elastic IP address.

More Information

For information about what an elastic IP is, as well as how to create one, visit the [AWS documentation](#).

Creating a Security Group

The Vertica AMI has specific security group requirements. When you create a Virtual Private Cloud (VPC), AWS automatically creates a default security group and assigns it to the VPC. You can use the default security group, or you can name and assign your own.

Create and name your own security group with the following basic security group settings. You may make additional modifications based on your specific needs.

Inbound

Type	Use	Protocol	Port Range	Source	IP
SSH		TCP	22	My IP	Limited IP range 169.24.165.0/24 or 0.0.0.0/0 for all internet access.
DNS (UDP)		UDP	53	My IP	10.0.0.0/24
Custom UDP	Spread	UDP	4803 and 4804	My IP	10.0.0.0/24
Custom TCP	Spread	TCP	4803	My IP	10.0.0.0/24
Custom TCP	VSQL/SQL	TCP	5433	My IP	Limited IP range 169.24.165.0/24 or 0.0.0.0/0 for all internet access.
Custom TCP	Inter-node Communication	TCP	5434	My IP	10.0.0.0/24
Custom TCP		TCP	5444	My IP	10.0.0.0/24
Custom	MC	TCP	5450	My IP	Limited IP range

TCP					169.24.165.0/24 or 0.0.0.0/0 for all internet access.
Custom TCP		TCP	48073	My IP	10.0.0.0/24
Custom TCP	Rsync	TCP	50000	My IP	10.0.0.0/24
ICMP	Installer	Echo Reply	N/A	My IP	10.0.0.0/24
ICMP	Installer	Traceroute	N/A	My IP	10.0.0.0/24

All ports must have a rule to open in the subnetCDIR level to allow nodes to be interconnected. For example, 10.11.12.0/24.

Note: In Management Console (MC), the Java IANA discovery process uses port 7 once to detect if an IP address is reachable before the database import operation. Vertica tries port 7 first. If port 7 is blocked, Vertica switches to port 22.

Outbound

Type	Protocol	Port Range	Destination	IP
All TCP	TCP	0-65535	Anywhere	0.0.0.0/0
All ICMP	ICMP	0-65535	Anywhere	0.0.0.0/0
All UDP	UDP	0-65535	Anywhere	0.0.0.0/0

More Information

For information about what a security group is, as well as how to create one, visit the [AWS documentation](#).

Installing and Running Vertica on AWS

Once you have configured your network, you are ready to create your AWS instances and install vertica. Follow these procedures to install and run Vertica on AWS.

Related Topics

- [Configuring and Launching an Instance](#)
- [Connecting to an Instance](#)
- [Preparing Instances](#)
- [Configuring Storage](#)
- [Forming a Cluster](#)
- [After Your Cluster Is Up and Running](#)
- [Initial Installation and Configuration](#)
- [Using Management Console \(MC\) on AWS](#)

Configuring and Launching an Instance

Once you have Configured your network settings on AWS, you are ready to configure and launch the instances that you will later install vertica onto. An Elastic Compute Cloud (EC2) instance without a Vertica AMI is similar to a traditional host. Just like with an on-premises cluster, you must prepare and configure your cluster and network at the hardware level before you can install Vertica.

When you create an EC2 instance on AWS using a Vertica AMI, the instance includes the Vertica software and a standard recommended configuration. The Vertica AMI acts as a template, requiring fewer configuration steps. Vertica recommends that you use the Vertica AMI as is – without modification.

Using the network configurations you created earlier, configure an instance in AWS:

1. Select the Vertica AMI from the AWS marketplace.
2. Select a [supported instance type](#).
3. Specify the number of instances you want to launch. A Vertica cluster uses identically configured instances of the same type. You cannot mix instance types.
4. Choose your VPC.

Note: Not all data centers support VPC. If you receive an error message that states "VPC is not currently supported...", choose a different region and zone (for example, choose us-east-1e rather than us-east-1c).

5. Assign a [Placement Group](#).

Add Storage:

1. Add storage to your instances based on your needs. Consider the following:
 - Micro Focus International plc recommends that you add a number of drives equal to the number of physical cores in your instance. For example, for a c3.8xlarge, add eight drives. For an r3.4xlarge, add four drives.
 - Micro Focus International plc does not recommend that you store your information on the root volume.
 - For optimal performance with EBS volumes, [Amazon recommends that you configure them in a RAID 0 array](#) on each node in your cluster.
 - Micro Focus International plc recommends that you create your storage when you create your instances. This allows AWS to optimize storage performance.

Configure Security Group:

1. Choose between your previously configured or the default Security Group.
2. Choose the key value pairs you intend to use with Vertica.

Launch Instances:

1. Verify that your instances are running.

Connecting to an Instance

Using your private key, connect to your cluster through the instance you attached an elastic IP to.

1. As the dbadmin user, type the following command, substituting your ssh key:

```
# ssh --ssh-identity <ssh key> dbadmin@elasticipaddress
```

2. Select **Instances** from the Navigation panel.
3. Select the instance that is attached to the Elastic IP.
4. Click **Connect**.
5. On **Connect to Your Instance**, choose one of the following options:
 - **A Java SSH Client directly from my browser**—Add the path to your private key in the field **Private key path**, and click **Launch SSH Client**.
 - **Connect with a standalone SSH client**—Follow the steps required by your standalone SSH client.

Connecting to an Instance from Windows Using Putty

If you connect to the instance from the Windows operating system, and plan to use Putty:

1. Convert your key file using PuTTYgen.
2. Connect with Putty or WinSCP (connect via the elastic IP), using your converted key (i.e., the *.ppk file).
3. Move your key file (the *.pem file) to the root dir using Putty or WinSCP.

Preparing Instances

After you create your instances, you need to prepare them for cluster formation. Prepare your instances by adding your AWS .pem key and your Vertica license.

By default, each AMI includes a Community Edition license. Once Vertica is installed, you can find the license at this location:

```
/opt/vertica/config/licensing/vertica_community_edition.license.key
```

1. As the dbadmin user, copy your *pem file (from where you saved it locally) onto your primary instance.

Depending upon the procedure you use to copy the file, the permissions on the file may change. If permissions change, the `install_vertica` script fails with a message similar to the following:

```
FATAL (19): Failed Login Validation 10.0.3.158, cannot resolve or connect to host as root.
```

If you receive a failure message, enter the following command to correct permissions on your *pem file:

```
chmod 600 /<name-of-pem>.pem
```

2. Copy your Vertica license over to your primary instance, placing it in your home directory or other known location.

Configuring Storage

Micro Focus recommends that you do *not* store your information on the root volume, especially your data and catalog directories. Instead, use dedicated EBS volumes for node storage. To take advantage of bursting, limit EBS volumes to 1TB or less. When configuring your storage, make sure to use a [supported file system](#).

For best performance, you can combine multiple EBS volumes into RAID-0. Vertica provides a shell script, which automates the storage configuration process.

Determining Volume Names

Before you combine volumes for storage, make note of your volume names so that you can alter the `configure_aws_software_raid.sh` shell script. You can find your volumes with the following commands:

```
cd /dev  
ls
```

Your volumes start with `xvd`.

Important: Ignore your root volume. Do not include any of your root volumes in the RAID creation process.

Combining Volumes for Storage

Follow these sample steps to combine your EBS volumes into RAID 0 using the `configure_aws_software_raid.sh` shell script.

1. Edit the `/opt/vertica/sbin/configure_aws_software_raid.sh` shell file as follows:
 - a. Comment out the `safety exit` command at the beginning .
 - b. Change the sample volume names to your own volume names, which you noted previously. Add more volumes, if necessary.
2. Run the `/opt/vertica/sbin/configure_aws_software_raid.sh` shell file. Running this file creates a RAID 0 volume and mounts it to `/vertica/data`.
3. Change the owner of the newly created volume to `dbadmin` with `chown` .
4. Repeat steps 1-3 for each node on your cluster.

More Information

For more information about EBS storage, refer to the [Amazon documentation](#).

Forming a Cluster

Use the `install_vertica` script to combine two or more individual instances and create a cluster.

Check the **My Instances** page for a list of current instances and their associated IP addresses. You need these IP addresses when you run the `install_vertica` script.

Combining Instances

The following example combines instances using the `install_vertica` script.

While connected to your primary instance, enter the following command to combine your instances into a cluster. Substitute the IP addresses for your instances and include your root `*pem` file name.

```
sudo /opt/vertica/sbin/install_vertica --hosts  
10.0.11.164,10.0.11.165,10.0.11.166 --dba-user-password-disabled --  
point-to-point --data-dir /vertica/data --ssh-identity ~/<name-of-  
pem>.pem --license <license.file>
```

Note: If you are using Community Edition, which limits you to three instances, you can simply specify `-L CE` with no license file.

When you issue `install_vertica` or `update_vertica` on an AMI, make sure to use the `--point-to-point` parameter. `--point-to-point` is the default when using AWS, so even if you don't specify `--point-to-point`, the installation is in effect. This parameter configures spread to use direct point-to-point communication between all Vertica nodes, which is a requirement for clusters on AWS. If you do not use the parameter, you receive an error telling you that you must use point-to-point communication on AWS.

Once you have combined your instances, Micro Focus International plc recommends deleting your `*pem` key from your cluster with the `shred` command to reduce security risks:

```
shred examplekey.pem
```

Important: You will need your `.pem` key to perform future Vertica updates.

Once you have formed a cluster, [Create a database](#).

Considerations When Using the `install_vertica` or `update_vertica` Scripts

- By default, the installer assumes that you have mounted your storage to `/vertica/data`. To specify another location, use the `--data-dir` argument. Micro Focus does not recommend that you store your data on the root drive.
- Password logons present a security risk on AWS. Include the parameter `--dba-user-password-disabled` so that the installer does not prompt for a password for the database user.

For complete information on the `install_vertica` script and its parameters, see the Installation Guide, specifically the section, *About the `install_vertica` Script*.

After Your Cluster Is Up and Running

Once your cluster is configured and running:

1. [Create a database](#). When Vertica was installed for you, a Vertica database administrator was created, dbadmin. You can use this pre-created dbadmin user to create and start a database. Refer to the Vertica Installation Guide for information on the dbadmin administrator.
2. Configure a database. Refer to the Vertica Administrator's Guide for information on configuring a database.
3. Refer to the full documentation set for Vertica for other tasks.

Safe Shutdown

To safely stop or reboot your cluster:

1. Stop the database.
2. Stop or reboot one or more instances.

Caution: If you stop or reboot an instance (or the cluster) without shutting the database down first, disk or database corruption could result. Shutting the database down first ensures that Vertica is not in the process of writing to disk when you shutdown. Refer to the Vertica Administrator's Guide for information on stopping a database.

Using Management Console (MC) on AWS

Management Console is a database management tool that allows you to view and manage aspects of your cluster. As of Vertica version 8.0.1, Micro Focus provides an MC AMI, which you can use with AWS.

The MC AMI allows you to create an instance, dedicated to running MC, that you can attach to a new or existing Verticacluster on AWS.

You can create and attach an MC instance to your Verticaon AWS cluster at any time, if your AWS cluster is running VerticaVertica version 8.0.1 or later.

Related Topics

- [Configuring and Launching an MC instance](#)
- [Network ACL settings](#)
- [Logging in to MC and Managing Your Cluster](#)

Configuring and Launching an MC instance

When you create an EC2 instance on AWS using a Vertica MC AMI, the instance includes a complete installation of Vertica MC. Hewlett Packard Enterprise recommends that you use the Vertica MC AMI as is – without modification.

configure and launch an MC instance in AWS:

1. Select the Vertica MC AMI from the AWS marketplace.
2. Create a single instance, Micro Focus International plc recommends c3.large for most implementations.
3. Place your MC instance within the VPC, subnet, and security group of the cluster which it will monitor.
4. Choose the key value pairs you use with Vertica.
5. Assign an elastic IP to the instance to make the MC externally accessible.

Configure Your Security Group:

The MC AMI requires specific security group configurations to communicate with the Vertica cluster. Enable the security rules for the MC AMI listed under the MC section of the Network ACL Settings section.

Launch MC Instance:

Verify that your MC instance is running.

Logging in to MC and Managing Your Cluster

After you launch your MC instance and configured your security group settings, log in to your database. To do so, use the elastic IP you specified during instance creation.

From this elastic IP, you can manage your Verticadatabase on AWS using standard MC procedures.

Considerations When Using MC on AWS

- Because MC is already installed on the MC AMI, the MC installation process does not apply.
- To uninstall MC on AWS, follow the procedures provided in [Uninstalling Management Console](#) before terminating the MC Instance.

Related Topics

- Refer to [Using Management Console](#) for information.
- Refer to [Managing Database Clusters](#) to create or import your cluster.

Adding Nodes to a Running AWS Cluster

Use these procedures to add instances/nodes to an AWS cluster. The procedures assume you have an AWS cluster up and running and have most-likely accomplished each of the following:

- Created a database.
- Defined a database schema.
- Loaded data.
- Run the database designer.
- Connected to your database.

Related Topics

- [Launching New Instances to Add to an Existing Cluster](#)
- [Including New Instances as Cluster Nodes](#)
- [Adding Nodes and Rebalancing the Database](#)

Launching New Instances to Add to an Existing Cluster

Perform the procedure in [Configuring and Launching an Instance](#) to create new instances that you then will add to your existing cluster. Be sure to choose the same details you chose when you created the original instances (VPC, placement group, subnet, and security group).

Including New Instances as Cluster Nodes

The **Instances** page lists the instances and their associated IP addresses. You need the IP addresses when you run the `install_vertica` script.

If you are configuring EBS volumes, be sure to configure the volumes on the node before you add the node to your cluster.

To add the new instances as nodes to your existing cluster:

1. [Configure and launch your new instances.](#)
2. Connect to the instance that is assigned to the Elastic IP. See [Connecting to an Instance](#) if you need more information.
3. Run the vertica installation script to add the new instances as nodes to your cluster. Specify the internal IP addresses for your instances and your `*pem` file name.

```
sudo /opt/vertica/sbin/install_vertica --add-hosts <instance-ip>--  
dba-user-password-disabled --point-to-point --data-dir  
/vertica/data --ssh-identity ~/<name-of-pem>.pem
```

Adding Nodes and Rebalancing the Database

Once you have added the new instances to your existing cluster, you add them as nodes to your cluster, and then rebalance the database.

Follow the procedure given in the Administration Guide, [Adding Nodes to a Database](#).

Removing Nodes From a Running AWS Cluster

Use these procedures to remove instances/nodes from an AWS cluster.

Related Topics

- [Preparing to Remove a Node](#)
- [Removing Hosts from the Database](#)
- [Removing Nodes from the Cluster](#)
- [Stopping the AWS instance](#)

Preparing to Remove a Node

Back up the Database. See the [Backup and Restore](#) sections of this document for more information.

Micro Focus recommends that you back up the database before performing this significant operation because it entails creating new projections, deleting old projections, and reloading data.

Removing Hosts From the Database

Before performing the procedure in this section, you must have completed the tasks referenced in [Preparing to Remove a Node](#). The following procedure assumes that you have both backed up your database and lowered the k-safety.

Note: Do not stop the database.

Perform the following to remove a host from the database.

1. While logged on as dbadmin, launch Administration Tools.

```
$ /opt/vertica/bin/admintools
```

Note: Do not remove the host that is attached to your EIP.

2. From the **Main Menu**, select **Advanced Tools Menu**.
3. From **Advanced Menu**, select **Cluster Management**. Select **OK**.
4. From **Cluster Management**, select **Remove Host(s)**. Select **OK**.
5. From **Select Database**, choose the database from which you plan to remove hosts. Select **OK**.
6. Select the host(s) to remove. Select **OK**.
7. Click **Yes** to confirm removal of the hosts.

Note: Enter a password if necessary. Leave blank if there is no password.

8. Select **OK**. The system displays a message letting you know that the hosts have been removed. Automatic re-balancing also occurs.
9. Select **OK** to confirm. Administration Tools brings you back to the **Cluster Management** menu.

Removing Nodes From the Cluster

To remove nodes from a cluster:

run the `install_vertica` script and specify:

- The option `--remove-hosts` followed by the IP addresses of the nodes you are removing
- The option `--ssh-identity` followed by the location and name of your `*pem` file. (The following example removes only one node from the cluster.)
- The option `--dba-user-password-disabled`

The following example removes 1 node from the cluster:

```
sudo /opt/vertica/sbin/install_vertica --remove-hosts 10.0.11.165 --  
point-to-point --ssh-identity ~/<name-of-pem>.pem --dba-user-password-  
disabled
```

Stopping the AWS Instances (Optional)

Once you have removed one or more nodes from your cluster, to save costs associated with running instances, you can choose to stop or terminate the AWS instances that were previously part of your cluster. This step is optional because, once you have removed the node from your Vertica cluster, Vertica no longer sees the instance/node as part of the cluster even though it is still running within AWS.

To stop an instance in AWS:

1. On AWS, navigate to your **Instances** page.
2. Right-click on the instance, and choose **Stop**.

Upgrading and Migrating Vertica on AWS

The topics in this section explain how you upgrade your version of Vertica and migrate data between clusters on AWS.

Upgrading to the latest Version of Vertica on AWS

Use these procedures for upgrading to the latest version of Vertica on AWS. The procedures assume that you have a 7.1 or later cluster successfully configured and running on AWS. If you are setting up an Vertica cluster on AWS for the first time, follow the [detailed procedure for installing and running Vertica on AWS](#).

Note: Both `install_vertica` and `update_vertica` use the same parameters.

Related Topics

- [Preparing to Upgrade Your Cluster](#)
- [Upgrading Vertica on AWS](#)

Preparing to Upgrade Your Cluster

Prepare for the upgrade to the latest Vertica version by performing the following:

1. Back up your existing database. See the [Backup and Restore](#) section for more information.
2. Download the Vertica install package. See [Download and Install the Vertica Install Package](#) in the Installation Guide for more information.

Upgrading Vertica Running on AWS

Vertica supports upgrades of Vertica Server running on AWS instances created from the Vertica AMI. To upgrade Vertica, follow the instructions provided in the Vertica [upgrade documentation](#).

Add the following arguments to the upgrade script:

- `--dba-user-password-disabled`
- `--point-to-point`

Migrating to Vertica 7.0 or later on AWS

Note: If you had a Vertica installation running on AWS prior to Release 6.1.x, you can migrate to Vertica 8.1.x or later using a new preconfigured AMI.

For more information, see the Solutions tab of the [myVertica portal](#).

Migrating Data Between AWS Clusters

This section provides guidance for copying (importing) data from another AWS cluster, or exporting data between AWS clusters.

There are common issues that occur when exporting or copying on AWS clusters. The issues are listed below. Except for these specific issues as they relate to AWS, copying and exporting data works as documented in the Administrator's Guide section, [Copying and Exporting Data](#).

1. **Ensure that all nodes in source and destination clusters have their own elastic IPs (or public IPs) assigned.**

If your destination cluster is located within the same VPC as your source cluster, proceed to step 3. Each node in one cluster must be able to communicate with each node in the other cluster. Thus, each source and destination node needs an elastic IP (or public IP) assigned.

2. **Set the parameter `DontCheckNetworkAddress` to true.**

On AWS, when creating a network interface, you receive an error if you attempt to assign the elastic IP to an AWS node (example uses a sample elastic IP address):

```
dbadmin=> CREATE NETWORK INTERFACE eipinterface ON v_tpch_node0001  
with '107.23.151.10';
```

ERROR 4125: No valid address found for [107.23.151.10] on this node
This error occurs because the elastic IP is the public IP and not the private IP of the target node. To resolve this issue, first set the parameter `DontCheckNetworkAddress` to true:

```
select set_config_parameter('DontCheckNetworkAddress', '1');
```

You can find information on the [CREATE NETWORK INTERFACE](#) statement and [SET_CONFIG_PARAMETER](#) in the SQL Reference Manual.

3. **Ensure your security group allows the AWS clusters to communicate.**

Check your security groups for both your source and destination AWS clusters. Ensure that ports 5433 and 5434 are open. If one of your AWS clusters is on a separate VPC, ensure that your network access control list (ACL) allows communication on port 5434.

Note: This communication method exports and copies (imports) data through the internet. You can alternatively use non-public IPs and gateways, or VPN to connect the source and destination clusters.

4. **If there is one or more ELB between the clusters, ensure that Port 5433 is opened between the ELBs and clusters.**
5. **If you use the Vertica client to connect to one or more ELBs, the ELBs only distribute incoming connections. The data transmission path occurs between clusters.**

Backup and Restore Vertica on Amazon Web Services

These sections outline three best-practice approaches for backing up and restoring Vertica clusters on Amazon Web Services (AWS) and the advance preparation required for each.

The examples in these sections recover a sample database, VMart, from multiple failures. To complete the steps in this guide, you should have a Vertica cluster on AWS with data on it.

More Information

For more information about backups, visit the [Backing Up and Restoring the Database](#) section of the Vertica documentation.

K-Safe Cluster Configuration

You can protect against isolated node failures with a K-safe cluster configuration. A K-safe cluster stores buddy data on other nodes in the cluster to prevent data loss if a node fails. For a cluster to be K-safe, it must consist of at least 3 nodes.

To learn more about K-safe cluster configurations, visit the [Designing For K-Safety](#) section of the Vertica documentation.

Recover from a K-Safe Failure

To recover from an isolated node failure, your cluster must still be in the UP state. Recovering from a K-safe failure does not require a backup.

If a node goes down and you cannot re-connect to it, you must re-create the node. Follow these steps to re-create a source node and recover from a K-safe failure:

- [Create a Target Node](#)
- [Recover a Node](#)

Note: If your primary node fails, you must reassign your Elastic IP, and then copy your .pem key file to one of your other running nodes to recover.

Create a Target Node

Create a target AWS instance ensuring the following:

- **Subnet, network, and VPC**—Your target instance must be in the same subnet, network, and VPC. It must also have the same network configurations as the nodes in your source cluster.
- **Cluster placement and availability zone**—Your target instance must be in the same cluster placement group and availability zone as the nodes in your source cluster.
- **IP address**—The internal IP address of your target instance must be the same as the IP address of the source node. Use the **Network Interfaces** option during instance creation to assign internal IP addresses.
- **Version compatibility**—Your target instance must use the same Vertica AMI version and hotfix version as the nodes in your source cluster.
- **Instance type**—Your target instance must use the same instance type as the nodes in your source cluster.

Recover a Node

1. On all your nodes, delete the .pem key information for the failed source node in the following locations:
 - /root/.ssh/known_hosts
 - /home/dbadmin/.ssh/known_hosts
2. On your main node, run the install script `install_vertica`, specifying:
 - your own key file
 - -Y option as point-to-point
 - dba user password disabled
 - dba user dbadmin:

```
sudo /opt/vertica/sbin/install_vertica -i ~/userkey.pem -Y --  
point-to-point --dba-user-password-disabled --dba-user dbadmin
```

3. Connect to your target node with SSH, and configure its storage to match your source cluster's storage.
4. Configure your target node:
 - a. Create an empty catalog and data directory matching the source node:

```
mkdir -p /vertica/data/VMart/v_vmart_node0003_catalog
```
 - b. Change the owner of the catalog and data directory to verticadba:

```
sudo chown dbadmin:verticadba /vertica/data/VMart
```
5. Restart the target node using admintools, specifying the IP address of your target node and your database name:

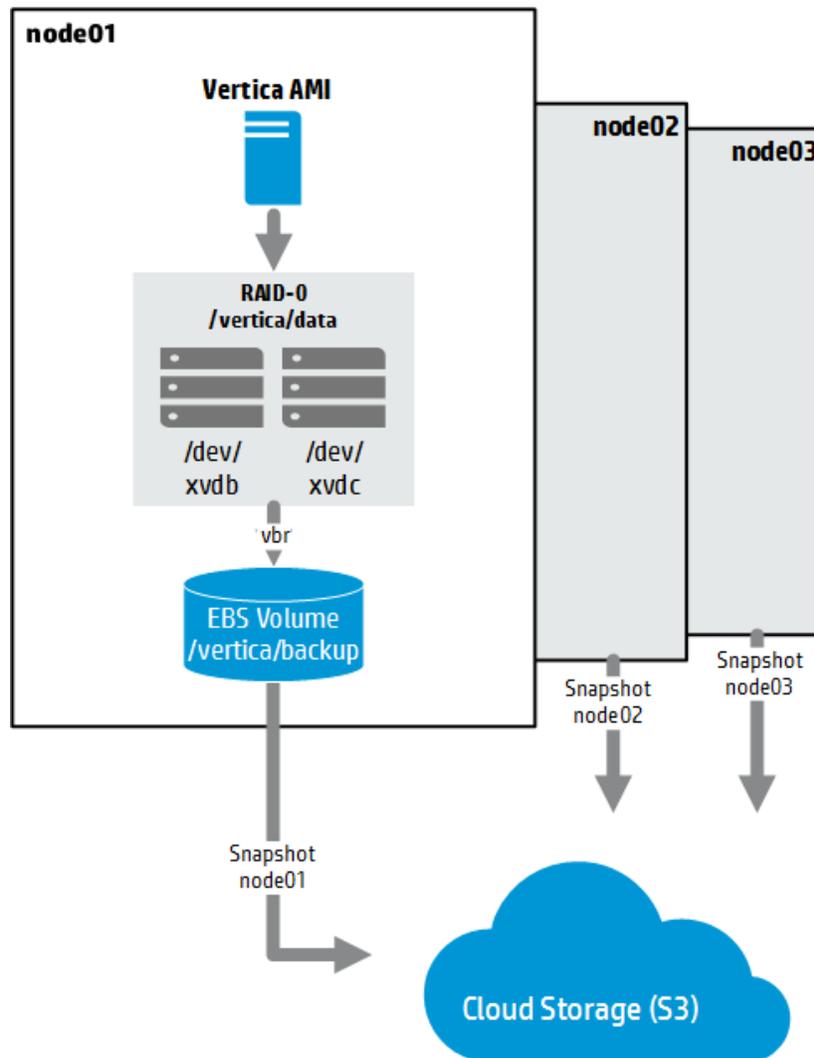

```
admintools -t restart_node -s 10.0.10.15 -d VMart
```

Your target node will now recover using data from its buddy, making your cluster K-safe once again. Depending on the size of your database, recovery may take some time.

Full Backup

A full backup captures a complete image of your database at a specific point in time. This option is the safest and most stable backup approach. A full backup lets you recover from a non K-safe loss, such as a multi-node failure or a total cluster failure.

Full Backup

Backup Artifacts

1. EBS snapshots (one for each node)
2. /opt/vertica/conf/admintools.conf
3. vmart_backup.ini

Storage Considerations

When you choose storage for your full backup, be aware of these considerations:

- If you are using ephemeral storage, you must perform a full backup.
- You must use EBS storage for the backup volume.

- To reduce costs, you may choose cheaper, slower EBS storage drive types for the backup volume.

To perform a full backup, you need the following:

- Properly formatted and mounted backup volumes
- An AWS snapshot of your backup volumes
- A backup configuration file

Find more information about full backups in the [Types of Backups](#) section of the Vertica documentation.

Related Topics

The process of creating a full backup on AWS requires the following tasks:

- [Prepare Backup Volumes](#)
- [Perform a Full Backup](#)

Prepare Backup Volumes

1. Find the size of the data catalog on each source node:

```
df -h /vertica/data/
```

Look for the number in the Used column.
2. Find the largest data catalog of all the nodes in your source cluster, and add a 20–50% safety margin.
3. Create and mount a new EBS volume to each source node. This volume should equal your largest data catalog with its safety margin.
4. Verify that your newly mounted volumes appear on each source node:

```
ls /dev
```
5. Format all volumes, using an Vertica supported file system:

```
sudo mkfs.ext4 /dev/xvdf
```
6. Create the backup folder. Specify the location where you mount the new backup volume:

```
sudo mkdir /vertica/backup
```

7. Mount the volume to `/vertica/backup`, and make it persistent:

```
sudo mount /vertica/backup  
sudo bash -c "echo '/dev/xvdf /vertica/backup ext4 defaults 0 0' >  
/etc/fstab"
```
8. Set `dbadmin` as the owner for all `/vertica/backup`:

```
sudo chown dbadmin:verticadba /vertica/backup
```
9. Verify the success of the mount operation by entering:

```
df -h
```
10. Repeat the formatting and mounting steps on all nodes.
11. Create a Backup configuration file by running `vbr` with the `--setupconfig` option:

```
/opt/vertica/bin/vbr --setupconfig
```

For more information about creating a backup configuration file, refer to [Creating vbr Configuration Files](#).
12. Once all of your backup locations exist, initialize those locations using the `vbr init` task:

```
vbr -t init -c config_file_name
```

Perform a Full Backup

1. Run `vbr`, specifying the `--config-file` and `--task backup` options:

```
/opt/vertica/bin/vbr --config-file vmart_backup.ini --task backup
```

Note: If your configuration file relies on a password file, you may need to copy your password file to each of your nodes to run `vbr`.
2. Verify that `vbr` completes without errors, and then make a snapshot of the backup volume on each of your nodes.
3. Save your `admintools` configuration file, which has information on your node IP addresses and mapping:

```
/opt/vertica/conf/admintools.conf
```

The snapshots, your backup configuration file, and your `admintools` configuration file make up your complete initial backup. Later in time, you may make an incremental backup by repeating steps 1 and 2.

Note:

- Incremental snapshots can take different amounts of time compared to the initial snapshot, because only the differences from the first snapshot are saved. If the differences are few, subsequent backups and snapshots can be quite fast.
- Snapshots are taken asynchronously. Therefore, you can continue to write the next backup as the previous snapshot completes.

For more information on EBS snapshots, visit the [AWS documentation](#).

See the [Creating Full and Incremental Backups](#) section of the Vertica documentation for additional information on incremental backups.

Restore from a Full Backup

If a cluster fails, use your backup configuration file and backup volume snapshots to restore your cluster from your last full backup.

Related Topics

The process of restoring from a full backup on AWS requires the following tasks:

- [Create a Target Cluster](#)
- [Restore a Database from a Full Backup](#)

Create a Target Cluster

Create a target cluster on AWS. Your new instances must match your source cluster in the following ways:

- **Network and VPC**—The target instances must be in the same network and VPC as each other. However, they do not have to be in the same network and VPC as your source cluster.
- **Number of instances and nodes**—You must use the same number of instances and nodes as your source cluster.

- **IP addresses**—The internal IP addresses of the target nodes must be the same as the internal IP addresses of the nodes in the source cluster.
- **Version compatibility**—Your target cluster must be running the same AMI and Vertica versions and using the same hotfix version as your source cluster.

Your new instances may differ from the source cluster in the following ways:

- Your target cluster may be in a different availability zone.
- You may use a different instance type for your target cluster.

Restore a Database from a Full Backup

After you create a target cluster, you must restore the database that was on the source cluster:

1. Using your source cluster backup snapshots, create and attach one volume for each node in your cluster and attach them to the nodes in your target cluster. Verify that the snapshots from the source cluster match with their respective nodes on the target cluster.

Important: You must use the correct device mapping. For example, a backup snapshot taken for node 1, must be recreated in the new cluster at node 1.

2. Mount the backup location on all nodes of the target cluster with the same file path as your source cluster:

```
sudo bash -c "echo '/dev/xvdf /vertica/backup ext4 defaults 0 0' > /etc/fstab"
sudo mkdir /vertica/backup
sudo mount /vertica/backup
```
3. Verify the success of your mounting operation by checking for data in your backup folder:

```
ls /vertica/backup/
```
4. Using your `admintools.conf` file backup as a reference, create an empty database on the target cluster with the same `dbadmin` username, password, data path, and database name as your source database.
5. Stop the database, if it is running.
6. Run a restore operation:

```
/opt/vertica/bin/vbr --config-file vmart_backup.ini --task restore
```
7. Start the database to conclude the restoration process.

Hard-Link Backup on AWS RAID-0

The way you perform a hard-link backup on AWS differs from doing a hard-link backup procedure on traditional bare metal Vertica installations. The use of a software RAID-0 device requires a different approach for AWS. Very small timing differences occur when taking the snapshot of the EBS volumes that make up RAID-0 devices. These timing differences can cause inconsistencies that make the backup invalid.

Important: Before performing a hard-link backup, you must freeze or unmount the RAID-0 file system.

You can choose between two options for performing a hard-link backup:

- Stop the cluster with `admintools`.
- Freeze the cluster with the `fsfreeze` command.

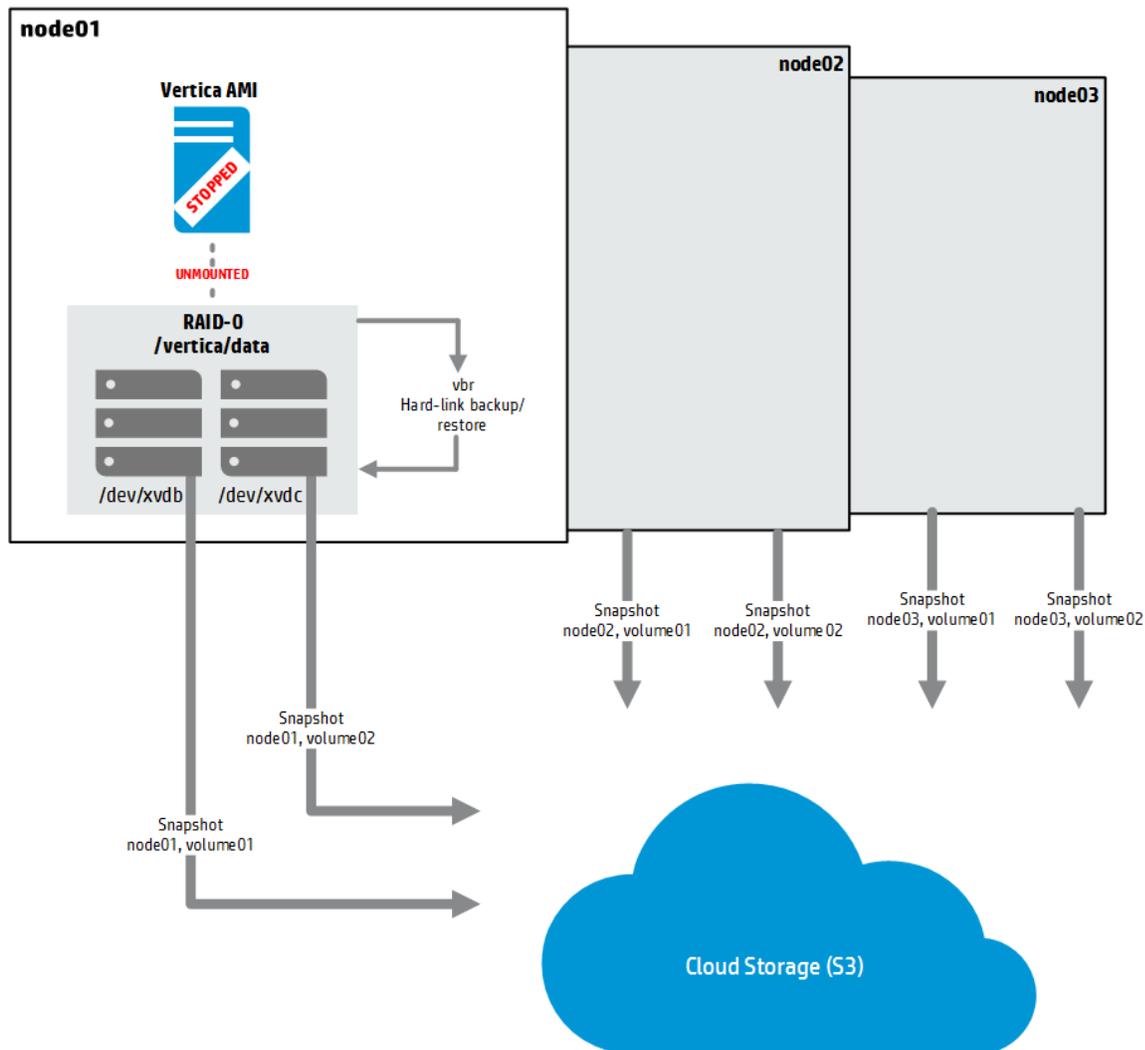

Note: You cannot perform a hard-link backup on AWS RAID-0 if your installation uses ephemeral volumes.

Hard-Link Backup with `admintools`

One way you can perform a hard-link backup is to stop the cluster with `admintools`. If you backup the volumes when the database is down, you can restore them without requiring you to run the `vbr` backup and restore script. However, if you want to maintain multiple point-in-time backups, you can still use `vbr`.

Use this approach if your service-level agreements allow you to stop the database for a period of time long enough to initiate snapshots.

Hard-Link Backup with admintools

Backup Artifacts

1. EBS snapshots (1 for each volume in RAID-0 on every cluster)
2. /opt/vertica/conf/admintools.conf
3. /etc/mdadm.conf (1 for each node)
4. vmart_backup.ini

Perform Hard-Link Backup Using admintools

Before performing this task, identify the instance IP addresses in your source cluster and make note of your RAID volumes for later use. Then, create a backup configuration file with hard-link backup enabled.

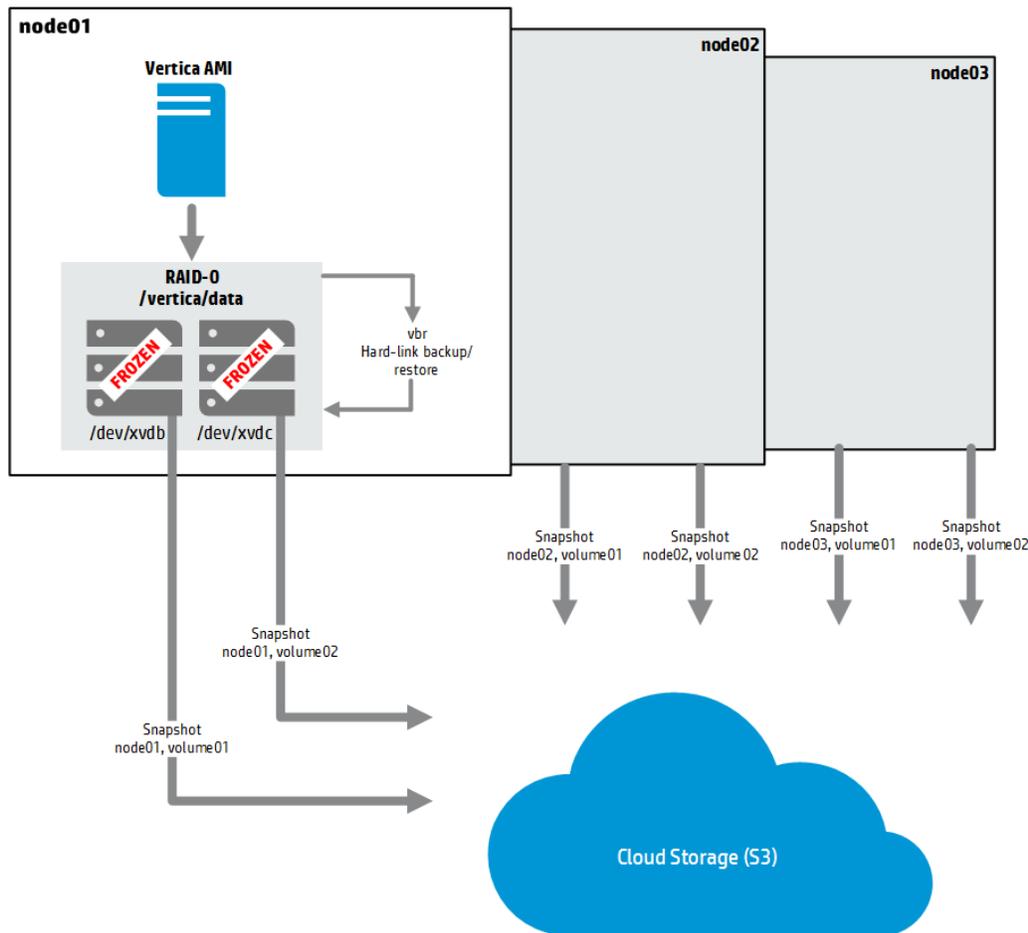

For information about enabling hard-link backup within a backup configuration file, see [Configuring the Hard Link Local Parameter](#) in the full Vertica documentation.

1. Stop the database:
`admintools -t stop_db -d VMart`
2. On each node, unmount your data volume:
`umount /vertica/data`
3. Create a snapshot of the RAID-0 volumes across your cluster, and make note of the each volume's corresponding snapshot ID. You need this information to assign snapshots to their correct node and volume designation during the restore process.
4. On each node, mount your data volume:
`mount /vertica/data`
5. Start your database:
`admintools -t start_db -d VMart`
6. Save the following:
 - Your RAID-0 configuration file for each node:
`/etc/mdadm.conf`
 - Your backup configuration file:
`vmart_backup.ini`
 - [Optional] Your admintools configuration file, which has information on your node IP addresses and mapping:
`/opt/vertica/conf/admintools.conf`

Hard-Link Backup with the fsfreeze Command

Another way you can perform a hard-link backup is freezing the cluster with the `fsfreeze` command. Because you can perform this kind of backup without stopping the cluster, users experience minimal performance effects. You must use `vbr` to restore from a backup performed using the `fsfreeze` command.

Hard-Link Backup with fsfreeze Command

- Backup Artifacts**
1. EBS snapshots (1 for each volume in RAID-0 on every cluster)
 2. /opt/vertica/conf/admintools.conf
 3. /etc/mdadm.conf (1 for each node)
 4. vmart_backup.ini

Perform a Hard-Link Backup with the fsfreeze Command

Before you can perform this procedure, you must identify the instance IP addresses in your source cluster, and make note of your RAID volumes. You also must create a backup configuration file with hard-link backup enabled. For information about enabling hard-link backup within a backup configuration file, see [Configuring the Hard Link Local Parameter](#) in the full Vertica a documentation.

1. Make a hard link backup on the RAID-0 device.
`/opt/vertica/bin/vbr --config-file vmart_backup.ini --task backup`

2. Freeze the RAID-0 volume across the cluster for a consistent snapshot of the EBS volumes that constitute that device. Freezing halts *all* database/SQL operation until you unfreeze the volume.

Important: Do not create a snapshot of a RAID-0 volume without freezing it first. Performing a snapshot without freezing your RAID volume invalidates your snapshot. Always check the return code of the `fsfreeze` command to ensure the device is frozen before you proceed.

```
for IP in 10.0.10.13 10.0.10.14 10.0.10.15; do ssh $IP sudo  
fsfreeze --freeze /vertica/data;
```

3. Create a snapshot of the RAID-0 volumes across your cluster. Make note of the each volume's corresponding snapshot ID. You will need this information to assign snapshots to their correct volume designation during the restore process.
4. After the snapshot has started for all EBS volumes on all nodes, unfreeze the file system:
for IP in 10.0.10.13 10.0.10.14 10.0.10.15; do ssh \$IP sudo
fsfreeze --unfreeze /vertica/data;

Note: You do not need to wait for the snapshot to complete before unfreezing.

5. Save the following:
 - Your RAID-0 configuration file for each node:
`/etc/mdadm.conf`
 - Your backup configuration file:
`vmart_backup.ini`
 - [Optional] Your admintools configuration file, which has information on your node IP addresses and mapping:
`/opt/vertica/conf/admintools.conf`

Restore from a Hard-Link Backup

If a cluster fails, use your backup configuration file and backup volume snapshots to restore your cluster from your last hard-link backup.

Related Topics

The process of restoring from a hard-link backup on AWS requires the following tasks:

- [Create a Target Cluster](#)
- [Restore a Database from a Hard-Link Backup](#)

Create a Target Cluster

Create a target cluster on AWS. Your new instances must match your source cluster in the following ways:

- **Network and VPC**—The target instances must be in the same network and VPC as each other. However, they do not have to be in the same network and VPC as your source cluster.
- **Number of instances and nodes**—You must use the same number of instances and nodes as your source cluster.
- **IP addresses**—The internal IP addresses of the target nodes must be the same as the internal IP addresses of the nodes in the source cluster.
- **Version compatibility**—Your target cluster must be running the same AMI and Vertica versions and using the same hotfix version as your source cluster.

Your new instances may differ from the source cluster in the following ways:

- Your target cluster may be in a different availability zone.
- You may use a different instance type for your target cluster.

Restore a Database from a Hard-Link Backup

1. Create EBS volumes from your backup snapshots.

Note: Before you attach your new volumes, stop and detach any existing RAID volumes mounted to the target cluster.

2. Attach the new EBS volumes to their respective nodes and volumes on the target cluster.

Important: You must use the correct device mapping. For example, a backup snapshot taken for node 1, volume `/dev/xvdf` must be re-created in the new cluster at node 1, volume `/dev/xvdf`.

3. Rebuild your RAID-0 device by restoring your RAID configuration file:
`/etc/mdadm.conf`
4. When the volumes have finished attaching, remount the RAID:
`for IP in 10.0.10.13 10.0.10.14 10.0.10.15; do ssh $IP sudo mount /vertica/data ;`
5. Create an empty database on the target cluster with the same dbadmin username, password, datapath, and database name as your source database.
6. Run a restore operation:
`/opt/vertica/bin/vbr --config-file vmart_backup.ini --task restore`

Troubleshooting Vertica On AWS

The following sections contain information for troubleshooting Vertica on AWS.

Related Topics

- [Checking Open Ports Manually Using the Netcat Utility](#)

Checking Open Ports Manually Using the Netcat Utility

Once your cluster is up and running, you can check ports manually through the command line using the netcat (nc) utility. What follows is an example using the utility to check ports.

Before performing the procedure, choose the private IP addresses of two nodes in your cluster.

The examples given below use nodes with the private IPs:

```
10.0.11.60 10.0.11.61
```

Install the nc utility on your nodes. Once installed, you can issue commands to check the ports on one node from another node.

1. To check a TCP port:
 - a. Put one node in listen mode and specify the port. In the following sample, we're putting IP `10.0.11.60` into listen mode for port `4804`.

```
[root@ip-10-0-11-60 ~]# nc -l 4804
```

- b. From the other node, run nc specifying the IP address of the node you just put in listen mode, and the same port number.

```
[root@ip-10-0-11-61 ~]# nc 10.0.11.60 4804
```

- c. Enter sample text from either node and it should show up on the other. To cancel once you have checked a port, enter **Ctrl+C**.

Note: To check a UDP port, use the same nc commands with the `-u` option.

```
[root@ip-10-0-11-60 ~]# nc -u -l 4804  
[root@ip-10-0-11-61 ~]# nc -u 10.0.11.60 4804
```

Vertica on Microsoft Azure

Welcome to the Vertica on Microsoft Azure guide. This section explains how you can create Vertica clusters on the Microsoft Azure Cloud Platform.

Overview of Vertica on Microsoft Azure

Vertica clusters on Microsoft Azure operate on virtual machines (VMs) within a virtual network. The instructions in this document apply to VMs in Azure that are built with Vertica.

For more information about Azure VMs, see the [Azure documentation](#).

Recommended VM Types

Vertica supports a range of Microsoft Azure virtual machine (VM) types, each optimized for different purposes. Choose the VM type that best matches your performance and price needs as a user.

For the best performance in most common scenarios, use one of the following VMs:

Optimization	Type
Memory optimized	DS13_V2 DS14_V2 DS15_V2
High memory and I/O throughput	GS3 GS4 GS5

Note: The GS VMs are not available in all regions. Nor are they available on the Azure Marketplace, but you can use them by following

the manual
deployment steps
described in [Deploy
Vertica on
Azure: Manual Steps](#).

Note: Data stored on the drives of a VM exists only while that VM is powered on. After powering off a VM, data on temporary drives is lost.

Supported Azure Operating Systems

For best performance, use one of the following operating systems when deploying Vertica on Azure:

- Red Hat 7.3
- CentOS 7.3. The Azure Marketplace solution as of this writing (June 2017) is based on CentOS 7.3.1611.

For more information, see [Vertica Supported Platforms](#).

Deploy Vertica from the Microsoft Azure Marketplace

For customers looking to quickly deploy a Vertica cluster in the Microsoft Azure Cloud, this section describes an automated deployment solution that can be accessed from the Azure Marketplace at [Vertica Analytics Platform](#).

To deploy Vertica on Microsoft Azure, you need to upgrade from the Free Trial, which limits you to a 4-core quota, to Microsoft Azure's Pay-As-You-Go subscription. The Pay-As-You-Go subscription requires a minimum quota of 8 cores which is what is needed for the Vertica Marketplace solution for Azure.

Check with Microsoft about the benefits and credits that you can carry over from the Free Trial to the Pay-As-You-Go subscription. For more information about upgrading a free Microsoft Azure trial account to Pay-As-You-Go, see [Azure pricing](#).

When you're ready, click **Get It Now** on [Vertica Analytics Platform](#). The following sections describe the steps you need to take after you click that button.

Basic Information that Azure Needs

On the first plane (window) of the installer for your Vertica-Azure solution, enter the following information:

- **DBADMIN username**—The primary username for the virtual machines being created. This name is also used as the Vertica DBADMIN account.
- **Authentication Type**—VMs in Azure support either password or SSH public key authentication.
- **Password or SSH public key**—Enter either a password or a public key to be associated with the DBADMIN user.
- **Root password**—Enter a password to be assigned to the root user. This is used during the Vertica installation.
- **Subscription**—Select an Azure subscription for the resources to be billed against.
- **Resource group**—Create a new resource group or select an existing resource group as the location to save all the Azure resources for your Vertica cluster.
- **Location**—Select an Azure data center to deploy the Vertica cluster. Make sure that you have enough quota assigned to that location.

Infrastructure Settings

In the second plane of the installer, make choices relating to the VMs and the virtual infrastructure.

- **Virtual machine size**—Vertica engineers have designated the three different VM types for deployment that are available on the Azure Marketplace. When you highlight this field, Azure displays those types and their specific characteristics.

- **Number of cluster nodes**—This drop-down field allows you to choose the number of nodes for Azure to deploy for the cluster. The Marketplace solution allows you to create between 1 and 15 nodes.

Important: To maintain K-safety for your database, select at least three nodes.

- **Total RAW storage per node**—Each VM comes configured with a premium data disk for Vertica to use. The choices in this drop-down are 768GB, 3TB, or 6TB.
- **Storage account name prefix**—All disks associated with the cluster are contained in a group of four premium storage accounts. Storage accounts must each have a unique name. When Azure creates the storage accounts, the Marketplace appends a number to the end of each name.
- **Storage account type**—Because Vertica is a high-end enterprise solution that requires fast, low-latency storage, Premium-LRS storage is the only available choice for this field.
- **Virtual network**—The Azure Marketplace solution for Vertica allows you to create a new virtual network, or select an existing virtual network, in which to place the Vertica cluster. This control on the deployment provides a point-and-click navigation to do just that.
- **Subnets**—Based on the selection of the virtual network, the Subnets entry allows you to select or create the subnet you want use in the virtual network.
- **Public IP address**—Each VM is configured with a publicly accessible IP address. This field allows you to specify the resource name for those IP addresses, and whether they are static or dynamic. When created, Azure appends a number from 1 to 15 to each resource name. This number designates which VM that the resource is associated with.
- **Domain name label**—Because each VM has a public IP address, each node also needs a DNS name. Enter a prefix for the name, such as `vertnode`. Azure appends a number from 1 to 15 to the DNS name. That number designates which VM it is associated with. Azure adds the remaining part of the fully qualified domain name based on the location where you created the cluster.

Vertica Settings for Azure

Vertica engineers have designated the third installer plane for additional options to be included in the Vertica cluster installation. These options are:

- **Include Vertica Management Console**—If you select YES, the marketplace installer includes the deployment of a smaller VM to be configured as a Vertica Management Console and placed in the same network as the Vertica cluster.
- **Virtual machine size**—This is the virtual machine size for the node that hosts Management Console. Vertica engineers have designated three different VM types for deployment that are available from the Azure Marketplace to support the Vertica Management Console. If you highlight this field, you can access detailed information about each VM type.

Validate Your Configuration

Review the settings on the installer Summary plane. Azure uses this plane to validate the values you entered.

In addition, Azure checks your settings against the existing quota to make sure that your solution deploys correctly. After you are satisfied with your choices and Azure has notified you that the validation passed, click **OK**.

Finalize the Purchase

On the final plane of the installer, agree to the Microsoft Terms of Use, and acknowledge that you agree to pay for the resources being created.

In addition, on this plane, review the Vertica Terms of Use and the privacy policy. After you click **Purchase**, the deployment begins.

Monitor the Deployment

After the deployment begins, you receive a notification that the deployment is in progress. When you click the notification, the Azure portal opens the deployment status page, which displays the resources for the cluster being created.

Access the Cluster After Deployment

After the deployment successfully completes, you receive a notification in the Azure portal. When you click the notification, the Azure portal opens the resource group and displays information about all the resources created.

Take the following steps to finalize the cluster installation:

1. Select the public IP address name of any Vertica cluster node to view the values for that node. Copy either the IP address or the DNS name for that node, and switch to an SSH client.
2. Connect to the node using the DBADMIN user you created along with the authentication method you chose (public key or password).
3. Once logged on to the VM as the DBADMIN user, to start the Vertica admintools application, enter the following command:

```
[dbadmin@vertnode1 ~]$ admintools
```

4. When asked, do one of the following:
 - Provide a path to a Vertica License File, or
 - Press **Enter** to accept the Vertica Community Edition.
5. And finally, accept the End User License Agreement (EULA).

At this point, your cluster is fully installed and you are ready to create a new database.

Access Management Console After Deployment

After the deployment successfully completes, you receive a notification in the Azure portal. When you click the notification, the Azure portal opens the resource group and displays information about all the resources created.

Take these steps to launch Management Console:

1. Select the public IP address name for the Management Console cluster. The name starts with VMC and is concatenated with the public IP address name you entered during installation.
2. Copy either the IP address or the DNS name for the node, and switch to a web browser.
3. Enter the following into your browser navigation field. This command launches the Management Console:

```
https://[IP address or DNS name]:5450
```

Now you can complete the installation process.

For complete information about how to use the Vertica Management Console, see [Using Management Console](#) in the Vertica documentation.

Deploy Vertica on Azure: Manual Steps

To start creating your Vertica cluster in Azure using manual steps, you first need to create a VM. During the VM creation process, you create and configure the other resources required for your cluster, which are then available for any additional VMs that you create.

Follow these procedures to deploy Vertica on Azure.

Configuring and Launching a New Instance

An Azure VM is similar to a traditional host. Just as with an on-premises cluster, you must prepare and configure the hardware settings for your cluster and network before you install Vertica.

The first steps are:

1. From the Azure marketplace, select an operating system that Vertica supports.
2. Select a VM type. See [Recommended VM Types](#)
3. Choose a deployment model. For best results, choose the resource manager deployment model.

Configure Network Security Group

Vertica has specific network security group requirements, as described in [Network Security Group Configurations](#).

Create and name your own network security group, following these guidelines.

You must configure SSH as:

- Protocol: TCP
- Source port range: Any
- Destination port range: 22

- Source: Any
- Destination: Any

You can make additional modifications, based on your specific requirements.

Add Disk Containers

Create an Azure storage account, which later contains your cluster storage disk containers.

For optimal throughput, select Premium storage and align the storage to a GS or DSv2 VM.

For more information about what a storage account is, and how to create one, refer to [About Azure storage accounts](#).

Configure Credentials

Create a password or assign an SSH key pair to use with Vertica.

For information about how to use key pairs in Azure, see [How to create and use an SSH public and private key pair for Linux VMs in Azure](#).

Assign a Public IP Address

A public IP is an IP address that you can use to connect to your cluster externally. For best results, assign a single static public IP to a node in your cluster. You can then connect to other nodes in your cluster from your primary node using the internal IP addresses that Azure generated when you specified your virtual network settings.

By default, a public IP address is dynamic; it changes every time you shut down the server. You can choose a static IP address, but doing so can add cost to your deployment.

During a VM installation, you cannot set a DNS name. If you use dynamic public IPs, set the DNS name in the public IP resource for each VM after deployment.

For information about public IP addresses, refer to [IP address types and allocation methods in Azure](#).

Create Additional VMs

If needed, to create additional VMs, repeat the previous instructions in this document.

Connect to a Virtual Machine

Before you can connect to any of the VMs you created, you must first make your virtual network externally accessible. To do so, you must attach the public IP address you created during network configuration to one of your VMs.

Connect to Your VM

To connect to your VM, complete the following tasks:

1. Connect to your VM using SSH with the public IP address you created in the configuration steps.
2. Authenticate using the credentials and authentication method you specified during the VM creation process.

Connect to Other VMs

Connect to other virtual machines in your virtual network by first using SSH to connect to your publicly connected VM. Then, use SSH again from that VM to connect through the private IP addresses of your other VMs.

If you are using private key authentication, you may need to move your key file to the root directory of your publicly connected VM. Then, use PuTTY or WinSCP to connect to other VMs in your virtual network.

Prepare the Virtual Machines

After you create your VMs, you need to prepare them for cluster formation.

Add the Vertica License and Private Key

Prepare your nodes by adding your private key (if you are using one) to each node and to your Vertica license. These steps assume that the initial user you configured is the DBADMIN user.

1. As the DBADMIN user, copy your private key file from where you saved it locally onto your primary node.

Depending upon the procedure you use to copy the file, the permissions on the file may change. If permissions change, the `install_vertica` script fails with a message similar to the following:

```
Failed Login Validation 10.0.2.158, cannot resolve or connect to host as root.
```

If you receive a failure message, enter the following command to correct permissions on your private key file:

```
$ chmod 600 /<name-of-key>.pem
```

2. Copy your Vertica license to your primary VM. Save it in your home directory or other known location.

Install Software Dependencies for Vertica on Azure

In addition to the Vertica standard [Package Dependencies](#), as the root user, you must install the following packages before you install Vertica on Azure:

- pstack
- mcelog
- sysstat
- dialog (Required for Vertica 8.0.x)

Configure Storage

Use a dedicated Azure storage account for node storage.

Caution: Do *not* store your information on the root volume, especially your data and catalog directories. Storing information on the root volume may result in data loss.

When configuring your storage, make sure to use a [supported file system](#).

Attach Disk Containers to Virtual Machines (VMs)

Using your previously created storage account, attach disk containers to your VMs that are appropriate to your needs.

For best performance, combine multiple storage volumes into RAID-0. For most RAID-0 implementations, attach 6 storage disk containers per VM.

Combine Disk Containers for Storage

If you are using RAID, follow these steps to create a RAID-0 drive on your VMs. The following example shows how you can create a RAID-0 volume named `md10` from 6 individual volumes named:

- `sdc`
- `sdd`
- `sde`
- `sdf`
- `sdg`
- `sdh`

1. Form a RAID-0 volume using the `mdadm` utility:

```
$ mdadm --create /dev/md10 --level 0 --raid-devices=6  
/dev/sdc /dev/sdd /dev/sde /dev/sdf /dev/sdg /dev/sdh
```

2. Format the file system to be one that Vertica supports:

```
$ mkfs.ext4 /dev/md10
```

3. Find the UUID on the newly formed RAID volume:

```
ls -l /dev/disk/by-uuid
```

4. Copy the UUID and place it in the FSTAB file.

```
$ sudo vi /etc/fstab  
UUID=<uuid here> /dev/md10 ext4 defaults , errors=remount-ro 1
```

5. Create folders for your Vertica data and catalog.

```
$ mkdir /vertica  
$ mkdir /vertica/data
```

6. Mount the RAID volume to your data and catalog directories.

```
$ mount /dev/md10 /home/dbadmin/vertica/data
```

Create a Swap File

In addition to storage volumes to store your data, Vertica requires a swap volume or swap file to operate.

Create a swap file or swap volume of at least 2 GB. The following steps show how to create a swap file within Vertica on Azure:

1. Install devnull and swapfile:

```
$ install -o root -g root -m 0600 /dev/null /swapfile
```

2. Create the swap file:

```
$ dd if=/dev/zero of=/swapfile bs=1024 count=2048k
```

3. Prepare the swap file using mkswap:

```
$ mkswap /swapfile
```

4. Use swapon to instruct Linux to swap on the swap file:

```
$ swapon /swapfile
```

5. Persist the swapfile in FSTAB:

```
$ echo "/swapfile          swap          swap          auto          0          0" >> /etc/fstab
```

Repeat the volume attachment, combination, and swap file creation procedures for each VM in your cluster.

For More Information

- [About Azure storage accounts](#)
- [Prepare Disk Storage Locations](#)

Download Vertica

To download the Vertica server appropriate for your operating system and license type, go to my.vertica.com/download/vertica.

Run the rpm to extract the files.

After you complete the download and extraction, the next section describes how to use the `install_vertica` script to form a cluster and install the Vertica database software.

Form a Cluster and Install Vertica

Use the `install_vertica` script to combine two or more individual VMs to form a cluster and install the Vertica database.

Before You Start

Before you run the `install_vertica` script:

- Check the **Virtual Network** page for a list of current VMs and their associated private IP addresses.
- Identify your storage location. The installer assumes that you have mounted your storage to `/vertica/data`. To specify another location, use the `--data-dir` argument.
- Identify your storage location. To create your database's data directory on mounted RAID drive, when you run the `install_vertica` script, provide `/vertica/data` as the value of the `--data-dir` option .

Caution: Do *not* store your data on the root drive.

Combine Virtual Machines (VMs)

The following example shows how to combine VMs using the `install_vertica` script.

1. While connected to your primary node, construct the following command to combine your nodes into a cluster.

```
$ sudo /opt/vertica/sbin/install_vertica --hosts 10.2.0.164,10.2.0.165,10.2.0.166 --dba-user-  
password-disabled --point-to-point --data-dir /vertica/data --ssh-identity ~/<name-of-private-  
key>.pem --license <license.file>
```

2. Substitute the IP addresses for your VMs and include your root key file name, if applicable.
3. Include the `--point-to-point` parameter to configure spread to use direct point-to-point communication between all Vertica nodes, as required for clusters on Azure when installing or updating Vertica.
4. If you are using Vertica Community Edition, which limits you to three nodes, specify `-L CE` with no license file.
5. After you combine your nodes, to reduce security risks, keep your key file in a secure place—separate from your cluster—and delete your on-cluster key with the `shred` command:

```
$ shred examplekey.pem
```

Important: You need your key file to perform future Vertica updates.

6. Reboot your cluster to complete the cluster formation and Vertica installation.

For complete information on the `install_vertica` script and its parameters, see [Installing Vertica with the Installation Script](#).

After Your Cluster is Up and Running

Now that your cluster is configured and running, and Vertica is running, take these steps:

1. [Creating a Database](#). When you installed Vertica, a database administrator user was created: DBADMIN.
2. Use this account to create and start a database. For detailed information about the DBADMIN role, see [DBADMIN Role](#).
3. [Configuring the Database](#). After the database is installed, it's important to configure its settings, schemas, and security.

Using Management Console (MC) on Azure

The Vertica solution in the Azure marketplace provides a Management Console (MC) virtual machine. The MC VM allows you to deploy a VM dedicated to running MC onto a Vertica cluster on Azure.

You can deploy an MC VM to your Vertica on Azure cluster at any time, as long as your cluster meets the following requirements:

- Your Azure cluster must be running Vertica version 8.0.x or later.
- Your MC version must be compatible with the Vertica version of your cluster.

Deploy an MC VM

To deploy MC onto your target Vertica cluster on Azure, perform these tasks:

1. Select the Vertica Management Console deployment from the Azure Marketplace.
2. Specify an admin username for your new MC VM.
3. Place your MC VM in the same location as your target cluster.
4. Place your MC VM in a resource group, separate from your target cluster.
5. Specify the virtual network and subnet of your target cluster.
6. Specify a DNS name and public IP address.

Configure the Network Security Group for the MC VM

The MC VM requires specific security group configurations in order to communicate with the Vertica cluster. Configure the security rules for the MC VM as described in the section "Configure Network Security Group" in [Configure Your Virtual Machine](#).

Log in to MC and Manage Your Cluster

After you have deployed your MC VM and configured your security group settings, enter the following into your browser navigation field. This command launches the Management Console:

```
https://[IP address or DNS name]:5450
```

Log in to Management Console using the public IP address that you specified during instance creation.

From there, you can manage your Vertica database on Azure using standard MC procedures.

Uninstalling MC

To uninstall MC on Azure, follow the procedures provided in [Uninstalling Management Console](#) before terminating the MC node.

Deploy the Vertica Test Drive for Azure

For users looking to experience Vertica in a “test drive” environment on Azure, we offer that capability at the Azure Marketplace at [Vertica Analytics Platform](#).

When you click the **Test Drive** button, Azure creates a single Vertica node that is preloaded with clickstream and sales data. This Test Drive allows you to explore and analyze the data before and after conducting A/B testing.

After the deployment completes, you receive an email with instructions on how to access the Test Drive. You can also consult the Test Drive user manual: [Vertica Test Drive for Clickstream Analytics](#).

Integrating with Apache Hadoop

Apache™ Hadoop™, like Vertica, uses a cluster of nodes for distributed processing. The primary component of interest is HDFS, the Hadoop Distributed File System.

You can use Vertica with HDFS in several ways:

- You can import HDFS data into locally-stored ROS files .
- You can access HDFS data in place using external tables. You can define the tables yourself or get schema information from HCatalog, a Hadoop component.
- You can use HDFS as a storage location for ROS files.
- You can export data from Vertica to share with other Hadoop components using a Hadoop columnar format.

See [Hadoop Interfaces](#) for more information about these options.

A Hadoop cluster can use Kerberos authentication to protect data stored in HDFS. Vertica integrates with Kerberos to access HDFS data if needed. See [Using Kerberos with Hadoop](#).

Hadoop Distributions

Vertica can be used with Hadoop distributions from Hortonworks, Cloudera, and MapR. See [Vertica Integrations for Hadoop](#) for the specific versions that are supported.

If you are using Cloudera, you can manage your Vertica cluster using Cloudera Manager. See [Integrating With Cloudera Manager](#).

If you are using MapR, see [Integrating Vertica with the MapR Distribution of Hadoop](#).

Cluster Architecture

Vertica supports two cluster architectures. Which architecture you use affects the decisions you make about integration. These options might also be limited by license terms.

- You can co-locate Vertica on some or all of your Hadoop nodes. Vertica can then take advantage of data locality.
- You can build a Vertica cluster that is separate from your Hadoop cluster. In this configuration, Vertica can fully use each of its nodes; it does not share resources with Hadoop.

These layout options are described in [Cluster Layout](#).

File Paths

Hadoop file paths are expressed as URLs in the `hdfs` or `webhdfs` URL scheme. If you need to escape a special character in a path, use URL escaping. All input characters that are not a-z, A-Z, 0-9, '-', '.', '_' or '~' must be converted to URL encoding (%NN where NN is a two-digit hexadecimal number). The following example URL-encodes a file name with a space in it.

```
hdfs:///opt/data/my%20file.orc
```

You can use globs, including regular expressions, in file paths. When Hive writes data, it sometimes creates temporary files with a "`_COPYING`" suffix. If you try to read these files into Vertica you will get an error message, because they are not a valid format. The following example copies only files ending in digits, the usual format for exports from Hive:

```
=> CREATE EXTERNAL TABLE (...) AS COPY FROM hdfs:///data/parquet/*_[0-9] PARQUET;
```

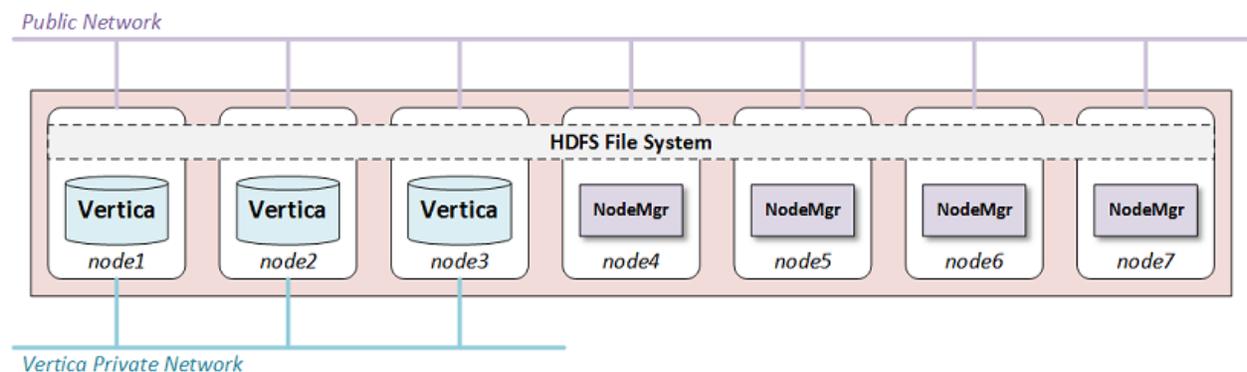

Cluster Layout

Vertica and Hadoop each use a cluster of nodes for distributed processing. These clusters can be co-located, meaning you run both products on the same machines, or separate. See [Co-located Clusters](#) and [Separate Clusters](#).

With either architecture, if you are using the `hdfs` scheme to read ORC or Parquet files, you must do some additional configuration. See [Configuring the hdfs Scheme](#).

Co-located Clusters

With co-located clusters, Vertica is installed on some or all of your Hadoop nodes. The Vertica nodes use a private network in addition to the public network used by all Hadoop nodes, as the following figure shows:

You might choose to place Vertica on all of your Hadoop nodes or only on some of them. If you are using HDFS Storage Locations you should use at least three Vertica nodes, the minimum number for [K-Safety](#).

Using more Vertica nodes can improve performance because the HDFS data needed by a query is more likely to be local to the node.

You can place Hadoop and Vertica clusters within a single rack, or you can span across many racks and nodes. If you do not co-locate Vertica on every node, you can improve performance by co-locating it on at least one node in each rack. See [Configuring Rack Locality](#).

Normally, both Hadoop and Vertica use the entire node. Because this configuration uses shared nodes, you must address potential resource contention in your configuration on those nodes. See [Configuring Hadoop for Co-located Clusters](#) for more information. No changes are needed on Hadoop-only nodes.

Hardware Recommendations

Hadoop clusters frequently do not have identical provisioning requirements or hardware configurations. However, Vertica nodes should be equivalent in size and capability, per the best-practice standards recommended in [General Hardware and OS Requirements and Recommendations](#) in Installing Vertica.

Because Hadoop cluster specifications do not always meet these standards, Micro Focus recommends the following specifications for Vertica nodes in your Hadoop cluster.

Specifications For...	Recommendation
Processor	<p>For best performance, run:</p> <ul style="list-style-type: none">• Two-socket servers with 8–14 core CPUs, clocked at or above 2.6 GHz for clusters over 10 TB• Single-socket servers with 8–12 cores clocked at or above 2.6 GHz for clusters under 10 TB
Memory	<p>Distribute the memory appropriately across all memory channels in the server:</p> <ul style="list-style-type: none">• Minimum—8 GB of memory per physical CPU core in the server• High-performance applications—12–16 GB of memory per physical core• Type—at least DDR3-1600, preferably DDR3-1866
Storage	<p>Read/write:</p> <ul style="list-style-type: none">• Minimum—40 MB/s per physical core of the CPU• For best performance—60–80 MB/s per physical core <p>Storage post RAID: Each node should have 1–9 TB. For a production setting, Micro Focus recommends RAID 10. In some cases, RAID 50 is acceptable.</p> <p>Because Vertica performs heavy compression and encoding, SSDs are not required. In most cases, a RAID of more, less-expensive HDDs performs just as well as a RAID of fewer SSDs.</p>

	If you intend to use RAID 50 for your data partition, you should keep a spare node in every rack, allowing for manual failover of a Vertica node in the case of a drive failure. A Vertica node recovery is faster than a RAID 50 rebuild. Also, be sure to never put more than 10 TB compressed on any node, to keep node recovery times at an acceptable rate.
Network	10 GB networking in almost every case. With the introduction of 10 GB over cat6a (Ethernet), the cost difference is minimal.

Configuring Hadoop for Co-Located Clusters

If you are co-locating Vertica on any HDFS nodes, there are some additional configuration requirements.

Hadoop Configuration Parameters

For best performance, set the following parameters with the specified minimum values:

Parameter	Minimum Value
HDFS block size	512MB
Namenode Java Heap	1GB
Datanode Java Heap	2GB

WebHDFS

Hadoop has two services that can provide web access to HDFS:

- WebHDFS
- httpFS

For Vertica, you must use the WebHDFS service.

YARN

The YARN service is available in newer releases of Hadoop. It performs resource management for Hadoop clusters. When co-locating Vertica on YARN-managed Hadoop nodes you must make some changes in YARN.

Micro Focus recommends reserving at least 16GB of memory for Vertica on shared nodes. Reserving more will improve performance. How you do this depends on your Hadoop distribution:

- If you are using Hortonworks, create a "Vertica" node label and assign this to the nodes that are running Vertica.
- If you are using Cloudera, enable and configure static service pools.

Consult the documentation for your Hadoop distribution for details. Alternatively, you can disable YARN on the shared nodes.

Hadoop Balancer

The Hadoop Balancer can redistribute data blocks across HDFS. For many Hadoop services, this feature is useful. However, for Vertica this can reduce performance under some conditions.

If you are using HDFS storage locations, the Hadoop load balancer can move data away from the Vertica nodes that are operating on it, degrading performance. This behavior can also occur when reading ORC or Parquet files if Vertica is not running on all Hadoop nodes. (If you are using separate Vertica and Hadoop clusters, all Hadoop access is over the network, and the performance cost is less noticeable.)

To prevent the undesired movement of data blocks across the HDFS cluster, consider excluding Vertica nodes from rebalancing. See the Hadoop documentation to learn how to do this.

Replication Factor

By default, HDFS stores three copies of each data block. Vertica is generally set up to store two copies of each data item through K-Safety. Thus, lowering the replication factor to 2 can save space and still provide data protection.

To lower the number of copies HDFS stores, set `HadoopFSReplication`, as explained in [Troubleshooting HDFS Storage Locations](#).

Disk Space for Non-HDFS Use

You also need to reserve some disk space for non-HDFS use. To reserve disk space using Ambari, set `dfs.datanode.du.reserved` to a value in the `hdfs-site.xml` configuration file.

Setting this parameter preserves space for non-HDFS files that Vertica requires.

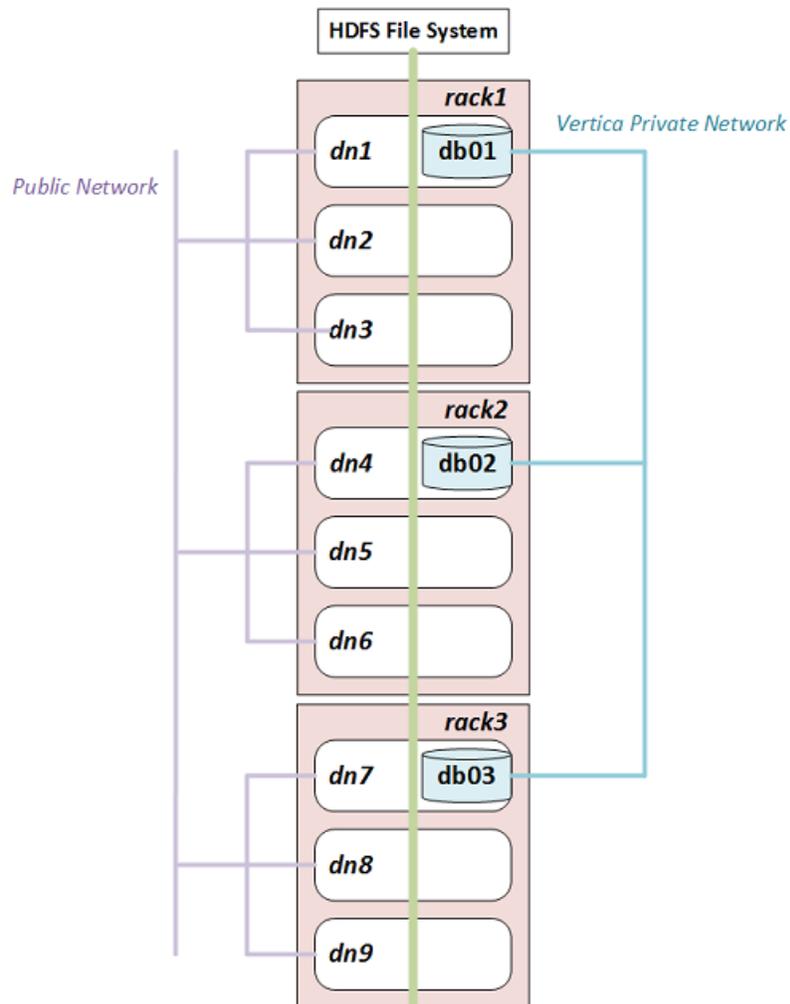

Configuring Rack Locality

Note: This feature is supported only for reading ORC and Parquet data on co-located clusters. It is only meaningful on Hadoop clusters that span multiple racks.

When possible, when planning a query Vertica automatically uses database nodes that are co-located with the HDFS nodes that contain the data. Moving query execution closer to the data reduces network latency and can improve performance. This behavior, called node locality, requires no additional configuration.

When Vertica is co-located on only a subset of HDFS nodes, sometimes there is no database node that is co-located with the data. However, performance is usually better if a query uses a database node in the same rack. If configured with information about Hadoop rack structure, Vertica attempts to use a database node in the same rack as the data to be queried.

For example, the following diagram illustrates a Hadoop cluster with three racks each containing three data nodes. (Typical production systems have more data nodes per rack.) In each rack, Vertica is co-located on one node.

If you configure rack locality, Vertica uses db01 to query data on dn1, dn2, or dn3, and uses db02 and db03 for data on rack2 and rack3 respectively. Because HDFS replicates data, any given data block can exist in more than one rack. If a data block is replicated on dn2, dn3, and dn6, for example, Vertica uses either db01 or db02 to query it.

Hadoop components are rack-aware, so configuration files describing rack structure already exist in the Hadoop cluster. To use this information in Vertica, configure fault groups that describe this rack structure. Vertica uses fault groups in query planning.

Configuring Fault Groups

Vertica uses [Fault Groups](#) to describe physical cluster layout. Because your database nodes are co-located on HDFS nodes, Vertica can use the information about the physical layout of the HDFS cluster.

Tip: For best results, ensure that each Hadoop rack contains at least one co-located Vertica node.

Hadoop stores its cluster-layout data in a topology mapping file in HADOOP_CONF_DIR. On HortonWorks the file is typically named topology_mappings.data. On Cloudera it is typically named topology.map. Use the data in this file to create an input file for the fault-group script. For more information about the format of this file, see [Creating a Fault Group Input File](#).

Following is an example topology mapping file for the cluster illustrated previously:

```
[network_topology]
dn1.example.com=/rack1
10.20.41.51=/rack1
dn2.example.com=/rack1
10.20.41.52=/rack1
dn3.example.com=/rack1
10.20.41.53=/rack1
dn4.example.com=/rack2
10.20.41.71=/rack2
dn5.example.com=/rack2
10.20.41.72=/rack2
dn6.example.com=/rack2
10.20.41.73=/rack2
dn7.example.com=/rack3
10.20.41.91=/rack3
dn8.example.com=/rack3
10.20.41.92=/rack3
dn9.example.com=/rack3
10.20.41.93=/rack3
```

From this data, you can create the following input file describing the Vertica subset of this cluster:

```
/rack1 /rack2 /rack3
/rack1 = db01
/rack2 = db02
/rack3 = db03
```

This input file tells Vertica that the database node "db01" is on rack1, "db02" is on rack2, and "db03" is on rack3. In creating this file, ignore Hadoop data nodes that are not also Vertica nodes.

After you create the input file, run the fault-group tool:

```
$ python /opt/vertica/scripts/fault_group_ddl_generator.py dbName input_file > fault_group_ddl.sql
```

The output of this script is a SQL file that creates the fault groups. Execute it following the instructions in [Creating Fault Groups Using the Fault Group Script](#).

You can review the new fault groups with the following statement:

```
=> SELECT member_name,node_address,parent_name FROM fault_groups  
INNER JOIN nodes ON member_name=node_name ORDER BY parent_name;
```

member_name	node_address	parent_name
db01	10.20.41.51	/rack1
db02	10.20.41.71	/rack2
db03	10.20.41.91	/rack3

(3 rows)

Working With Multi-Level Racks

A Hadoop cluster can use multi-level racks. For example, `/west/rack-w1`, `/west/rack-2`, and `/west/rack-w3` might be served from one data center, while `/east/rack-e1`, `/east/rack-e2`, and `/east/rack-e3` are served from another. Use the following format for entries in the input file for the fault-group script:

```
/west /east  
/west = /rack-w1 /rack-w2 /rack-w3  
/east = /rack-e1 /rack-e2 /rack-e3  
/rack-w1 = db01  
/rack-w2 = db02  
/rack-w3 = db03  
/rack-e1 = db04  
/rack-e2 = db05  
/rack-e3 = db06
```

Do not create entries using the full rack path, such as `/west/rack-w1`.

Auditing Results

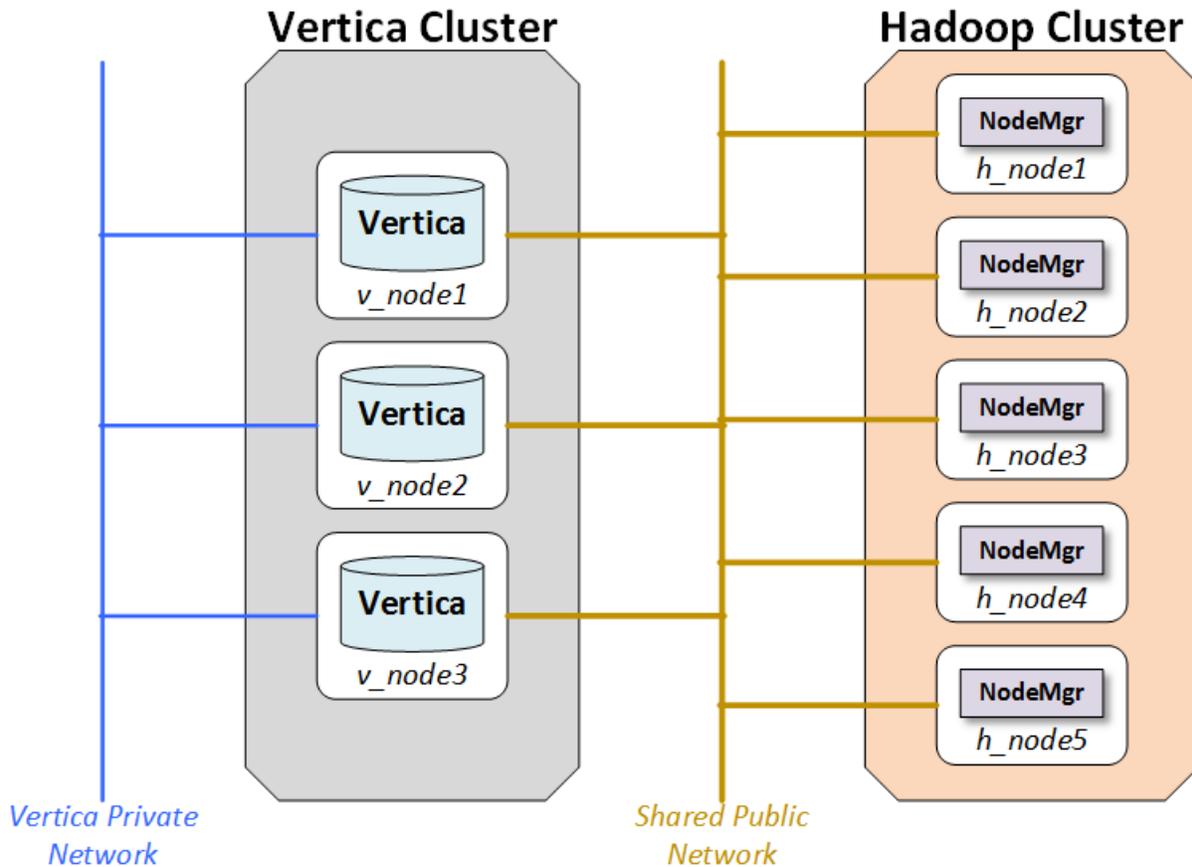

To see how much data can be loaded with rack locality, use [EXPLAIN](#) with the query and look for statements like the following in the output:

```
100% of ORC data including co-located data can be loaded with rack locality.
```

Separate Clusters

With separate clusters, a Vertica cluster and a Hadoop cluster share no nodes. You should use a high-bandwidth network connection between the two clusters.

The following figure illustrates the configuration for separate clusters::

Network

The network is a key performance component of any well-configured cluster. When Vertica stores data to HDFS it writes and reads data across the network.

The layout shown in the figure calls for two networks, and there are benefits to adding a third:

- **Database Private Network:** Vertica uses a private network for command and control and moving data between nodes in support of its database functions. In some networks, the command and control and passing of data are split across two networks.
- **Database/Hadoop Shared Network:** Each Vertica node must be able to connect to each Hadoop data node and the Name Node. Hadoop best practices generally require a dedicated network for the Hadoop cluster. This is not a technical requirement, but a dedicated network improves Hadoop performance. Vertica and Hadoop should share the dedicated Hadoop network.

- **Optional Client Network:** Outside clients may access the clustered networks through a client network. This is not an absolute requirement, but the use of a third network that supports client connections to either Vertica or Hadoop can improve performance. If the configuration does not support a client network, than client connections should use the shared network.

Hadoop Configuration Parameters

For best performance, set the following parameters with the specified minimum values:

Parameter	Minimum Value
HDFS block size	512MB
Namenode Java Heap	1GB
Datanode Java Heap	2GB

Hadoop Interfaces

Vertica provides several ways to interact with data stored in HDFS, described below. Decisions about [Cluster Layout](#) can affect the decisions you make about which Hadoop interfaces to use.

Querying Data Stored in HDFS

Vertica can query data directly from HDFS without requiring you to copy data. To query data, you define an external table as for any other external data source. (This option does not make use of schema definitions from Hive.)

Vertica can query the data directly from the HDFS nodes, bypassing the WebHDFS service. To query data directly, Vertica needs access to HDFS configuration files.

See [Reading Directly from HDFS](#) and [Reading Hadoop Columnar File Formats](#).

Querying Data Using the HCatalog Connector

The HCatalog Connector uses Hadoop services (Hive and HCatalog) to query data stored in HDFS. Using the HCatalog Connector, Vertica can use Hive's schema definitions. However, performance can be poor compared to defining your own external table and querying the data directly. The HCatalog Connector is also sensitive to changes in the Hadoop libraries on which it depends; upgrading your Hadoop cluster might affect your HCatalog connections.

See [Using the HCatalog Connector](#).

Using ROS Data

Storing data in the Vertica native file format (ROS) delivers better query performance than reading externally-stored data. You can create storage locations on your HDFS cluster to hold ROS data. Even if your data is already stored in HDFS, you might choose to copy that data into an HDFS storage location for better performance. If your Vertica cluster also uses local file storage, you can use HDFS storage locations for lower-priority data.

See [Using HDFS Storage Locations](#) for information about creating and managing HDFS storage locations, and [Reading Directly from HDFS](#) for information about copying data into them.

Exporting Data

You might want to export data from Vertica, either to share it with other Hadoop-based applications or to move lower-priority data from ROS to less-expensive storage. You can export a table, or part of one, in Hadoop columnar format. After export you can still query the data using an external table, as for any other data.

See [Exporting Data](#).

Using Kerberos with Hadoop

If your Hortonworks or Cloudera Hadoop cluster uses Kerberos authentication to restrict access to HDFS, you must configure Vertica to make authenticated connections. The details of this configuration vary, based on which methods you are using to access HDFS data.

Vertica does not support Kerberos for MapR.

This section covers the following topics:

- [How Vertica uses Kerberos With Hadoop](#)
- [Configuring Kerberos](#)

How Vertica uses Kerberos With Hadoop

Vertica authenticates with Hadoop in two ways that require different configurations:

- **User Authentication**—On behalf of the user, by passing along the user's existing Kerberos credentials, as occurs with the HDFS Connector and the HCatalog Connector.
- **Vertica Authentication**—On behalf of system processes (such as the Tuple Mover), by using a special Kerberos credential stored in a keytab file.

Note: Vertica and Hadoop must use the same Kerberos server (KDC).

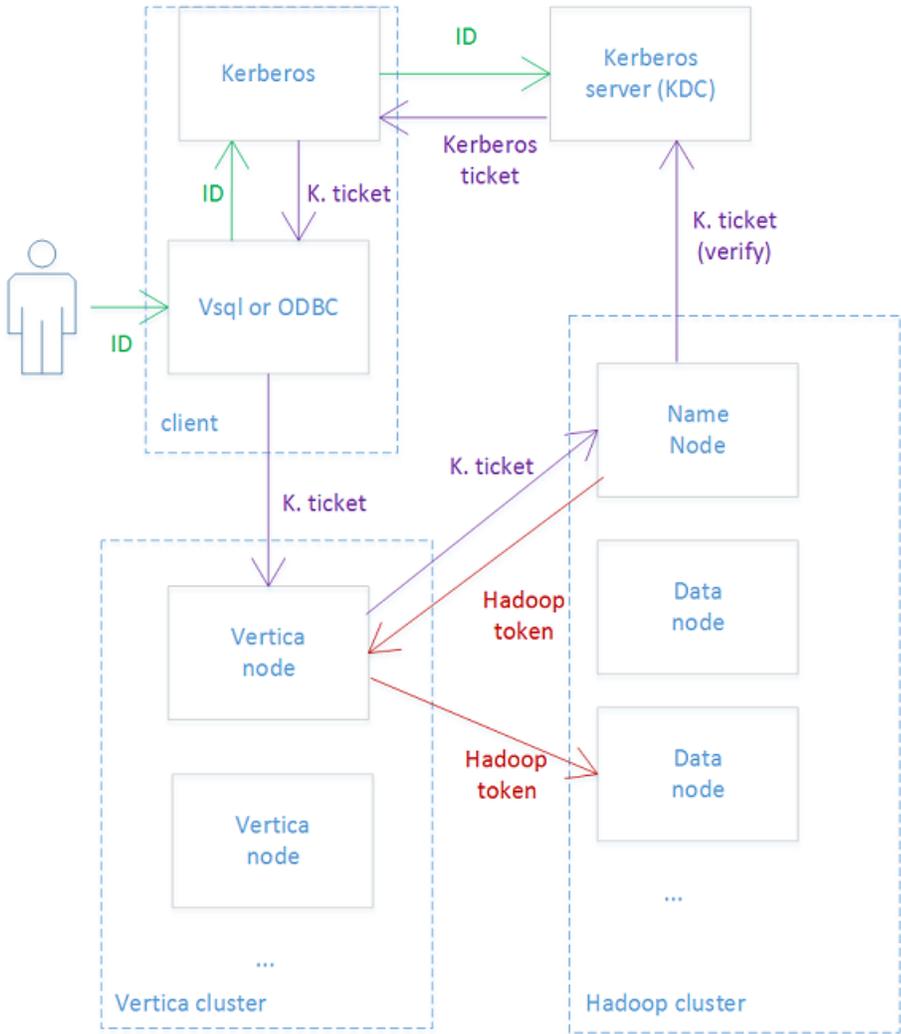

User Authentication

To use Vertica with Kerberos and Hadoop, the client user first authenticates with the Kerberos server (Key Distribution Center, or KDC) being used by the Hadoop cluster. A user might run `kinit` or sign in to Active Directory, for example.

A user who authenticates to a Kerberos server receives a Kerberos ticket. At the beginning of a client session, Vertica automatically retrieves this ticket. The database then uses this ticket to get a Hadoop token, which Hadoop uses to grant access. Vertica uses this token to access HDFS, such as when executing a query on behalf of the user. When the token expires, the database automatically renews it, also renewing the Kerberos ticket if necessary.

The user must have been granted permission to access the relevant files in HDFS. This permission is checked the first time Vertica reads HDFS data.

The following figure shows how the user, Vertica, Hadoop, and Kerberos interact in user authentication:

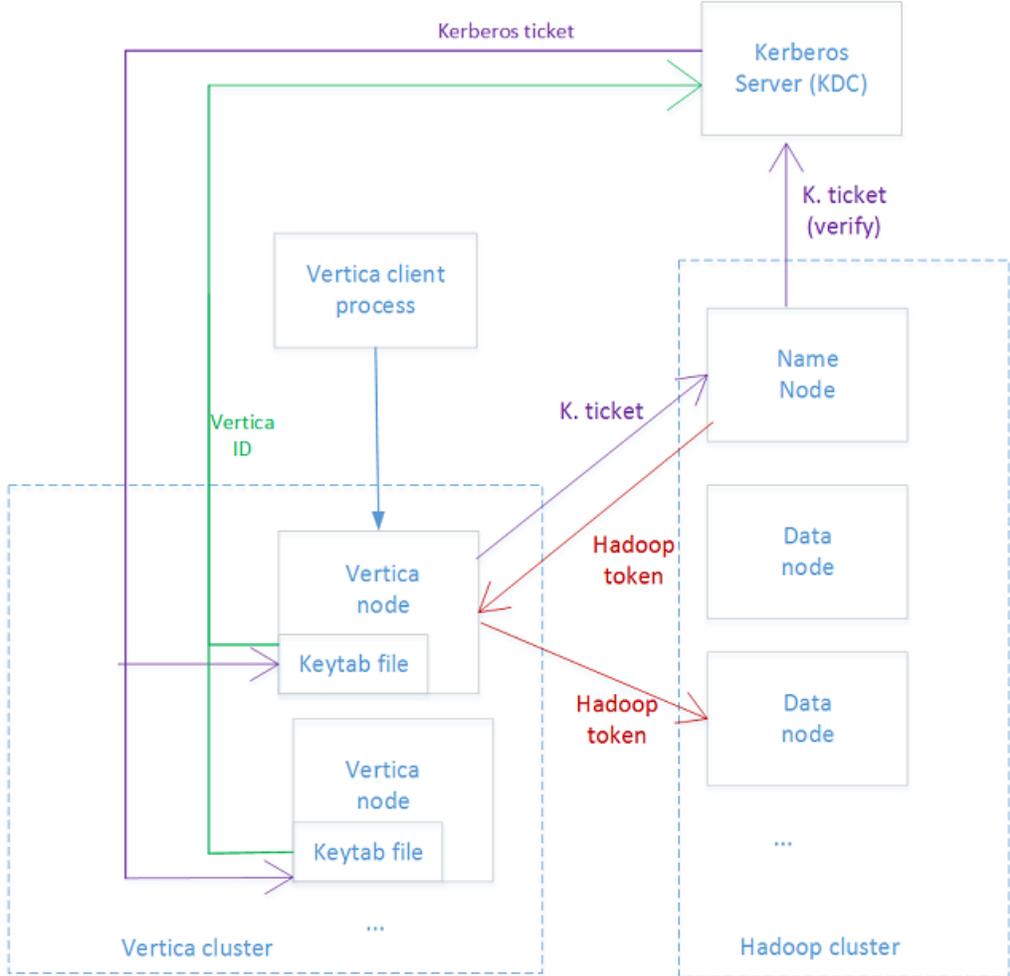

When using the HDFS Connector or the HCatalog Connector, or when reading an ORC or Parquet file stored in HDFS, Vertica uses the client identity as the preceding figure shows.

Vertica Authentication

Automatic processes, such as the Tuple Mover, do not log in the way users do. Instead, Vertica uses a special identity (principal) stored in a keytab file on every database node. (This approach is also used for Vertica clusters that use Kerberos but do not use Hadoop.) After you configure the keytab file, Vertica uses the principal residing there to automatically obtain and maintain a Kerberos ticket, much as in the client scenario. In this case, the client does not interact with Kerberos.

The following figure shows the interactions required for Vertica authentication:

Each Vertica node uses its own principal; it is common to incorporate the name of the node into the principal name. You can either create one keytab per node, containing only that node's principal, or you can create a single keytab containing all the principals and distribute the file to all nodes. Either way, the node uses its principal to get a Kerberos ticket and then uses that ticket to get a Hadoop token. For simplicity, the preceding figure shows the full set of interactions for only one database node.

When creating HDFS storage locations Vertica uses the principal in the keytab file, not the principal of the user issuing the CREATE LOCATION statement.

See Also

For specific configuration instructions, see [Configuring Kerberos](#).

Configuring Kerberos

Vertica can connect with Hadoop in several ways, and how you manage Kerberos authentication varies by connection type. If you use Kerberos, you must use it for both your HDFS and Vertica clusters.

Prerequisite: Set Up Users and the Keytab File

If you have not already configured Kerberos authentication for Vertica, follow the instructions in [Configure Vertica for Kerberos Authentication](#). Of particular importance for Hadoop integration:

1. Create one Kerberos principal per node.
2. Place the keytab file(s) in the same location on each database node and set `KerberosKeytabFile` to its location. (See [Specify the Location of the Keytab File](#).)
3. Set `KerberosServiceName` to the name of the principal. (See [Inform About the Kerberos Principal](#).)

Reads with the hdfs Scheme

Vertica can access files stored in HDFS using the `hdfs` URL scheme instead of using `WebHDFS`. Vertica authenticates using the current user's Kerberos principal, not the database's Kerberos principal. No additional Kerberos-specific configuration is required.

HCatalog Connector

You use the HCatalog Connector to query data in Hive. The HCatalog Connector executes queries on behalf of Vertica users. If the current user has a Kerberos key, then Vertica passes that key to the HCatalog connector automatically. Verify that the administrator of your HDFS cluster has granted HDFS access to all users who need access to Hive.

In addition, in your Hadoop configuration files (`core-site.xml` in most distributions), make sure that you enable all Hadoop components to impersonate the Vertica user. The easiest way to do so is to set the `proxyuser` property using wildcards for all users on all hosts and in all groups.

Consult your Hadoop documentation for instructions. Make sure you set this property before running `hcatUtil` (see [Configuring Vertica for HCatalog](#)).

HDFS Storage Location

You can create a database storage location in HDFS. An HDFS storage location provides improved performance compared to other HDFS interfaces (such as the HCatalog Connector). By storing the data in Vertica, rather than creating an external table, you can reduce query response times.

To use a storage location in HDFS with Kerberos, take the following steps:

1. Create a Kerberos principal for each Vertica node as described under [Prerequisites](#).
2. Give all node principals read and write permission to the HDFS directory you will use as a storage location.

If you plan to back up your HDFS storage locations, take the following additional steps:

1. Grant Hadoop superuser privileges to the new principals.
2. Configure backups, including setting the `HadoopConfigDir` configuration parameter, following the instructions in [Configuring Hadoop and Vertica to Enable Backup of HDFS Storage](#).
3. Configure user impersonation to be able to restore from backups following the instructions in "Setting Kerberos Parameters" in [Configuring Vertica to Restore HDFS Storage Locations](#).

Because the keytab file supplies the principal used to create the location, you must have it in place before creating the storage location. After you deploy keytab files to all database nodes, use the `CREATE LOCATION` statement to create the storage location as usual.

HDFS Connector

The HDFS Connector loads data from HDFS into Vertica on behalf of the user. If the user performing the data load has a Kerberos key, then the connector uses it to access HDFS. Verify that all users who use this connector have been granted access to HDFS.

The HDFS Connector is deprecated. Use the other Hadoop interfaces instead.

Verifying Kerberos Configuration

Use the [KERBEROS_HDFS_CONFIG_CHECK](#) metafunction to verify that Vertica can use Kerberos to access HDFS. You can call it with no parameters to test all paths described in the Hadoop configuration files. Alternatively, you can specify `hdfs`, `webhdfs`, and `WebHCat` servers to test individually.

```
=> SELECT KERBEROS_HDFS_CONFIG_CHECK();

=> SELECT KERBEROS_HDFS_CONFIG_CHECK('node1.example.com:9433',
                                     'node2.example.com:10443', 'node2.example.com:14443');
```

This function does not yet check access to HiveServer2.

Token Expiration

Vertica attempts to automatically refresh Hadoop tokens before they expire, but you can also set a minimum refresh frequency if you prefer. Use the `HadoopFSTokenRefreshFrequency` configuration parameter to specify the frequency in seconds:

```
=> ALTER DATABASE exampledb SET HadoopFSTokenRefreshFrequency = '86400';
```

If the current age of the token is greater than the value specified in this parameter, Vertica refreshes the token before accessing data stored in HDFS.

- [How Vertica uses Kerberos With Hadoop](#)
- [Troubleshooting Kerberos Authentication](#)

Reading Directly from HDFS

When reading files from HDFS, you can use the `hdfs` scheme instead of the `webhdfs` scheme. Using the `hdfs` scheme can improve performance and stability by bypassing the WebHDFS service.

You can use the `hdfs` scheme with [COPY](#) and with [CREATE EXTERNAL TABLE AS COPY](#). When using the `hdfs` scheme with `COPY`, you do not need to specify `ON ANY NODE`.

To support direct access, Vertica requires access to certain configuration files from your HDFS cluster. See [Configuring the hdfs Scheme](#).

URL Format

You specify the location of a file in HDFS using a URL. In most cases, you use the `hdfs:///` URL prefix (three slashes), and then specify the file path. Vertica uses the `fs.defaultFS` Hadoop configuration parameter to find the data. The following example loads data stored in HDFS.

```
=> COPY t FROM 'hdfs:///opt/data/file1.dat';
```

You can specify a host and port explicitly using the following format: `hdfs://host:port/`. The specified host is the Name Node, not an individual data node. If you are using High Availability (HA) Name Nodes you should not use an explicit host because high availability is provided through nameservices instead.

Your HDFS cluster might use High Availability Name Nodes or define nameservices. If so, you should use the nameservice instead of the host and port, in the format `hdfs://nameservice/`. The nameservice you specify must be defined in `hdfs-site.xml`.

The following example shows how you can use a nameservice, `hadoopNS`, with the `hdfs` scheme.

```
=> CREATE EXTERNAL TABLE tt (a1 INT, a2 VARCHAR(20))
    AS COPY FROM 'hdfs://hadoopNS/data/file.csv';
```

If you are using Vertica to access data from more than one HDFS cluster, always use explicit nameservices or hosts in the URL. Using `hdfs:///` could produce unexpected results because Vertica uses the first value of `fs.defaultFS` that it finds. To access multiple HDFS clusters, you must use host and service names that are globally unique. See [Configuring the hdfs Scheme](#) for more information.

Note: All characters in URLs that are not a–z, A–Z, 0–9, '-', '.', '_' or '~' must be converted to URL encoding (%NN where NN is a two-digit hexadecimal number). For example, use %20 for space.

Kerberos Authentication

If the file you want to read resides on an HDFS cluster that uses Kerberos authentication, Vertica uses the current user's principal to authenticate. It does *not* use the database's principal.

You can use the [KERBEROS_HDFS_CONFIG_CHECK](#) metafunction to verify that Vertica is correctly configured for Kerberos access.

Configuring the hdfs Scheme

Vertica uses information from the Hadoop cluster configuration to support the hdfs scheme. Vertica nodes therefore must have access to certain Hadoop configuration files. To use a cluster with High Availability Name Node or to read from more than one Hadoop cluster, you must perform additional configuration.

For both co-located and separate clusters that use Kerberos authentication, configure Vertica for Kerberos as explained in [Configure Vertica for Kerberos Authentication](#).

Using the hdfs scheme still requires access to the WebHDFS service. For some special cases, Vertica cannot use the hdfs scheme and falls back to webhdfs.

Accessing Hadoop Configuration Files

To support the hdfs scheme, your Vertica nodes need access to certain Hadoop configuration files:

- If Vertica is co-located on HDFS nodes, then those configuration files are already present.
- If Vertica is running on a separate cluster, you must copy the required files to all database nodes. A simple way to do so is to configure your Vertica nodes as Hadoop edge nodes. Client applications run on *edge nodes*; from Hadoop's perspective, Vertica is a client application. You can use Ambari or Cloudera Manager to configure edge nodes. For more information, see the documentation from your Hadoop vendor.

Verify that the value of the HadoopConfDir configuration parameter (see [Hadoop Parameters](#)) includes a directory containing the files listed in the following table. If you do not set a value, Vertica looks for the files in /etc/hadoop/conf. You can use the [VERIFY_HADOOP_CONF_DIR](#) meta-function to verify that Vertica can find configuration files.

Vertica uses the following configuration files and properties. If a property is not defined, Vertica uses the defaults shown in the table. Your Hadoop configuration files must specify all properties that have no defaults.

File	Properties	Default
core-site.xml	fs.defaultFS	none
hdfs-site.xml	dfs.client.failover.max.attempts	4
	dfs.client.failover.connection.retries.on.timeouts	0
	ipc.client.connect.timeout	30 seconds
	ipc.client.connect.retry.interval	10 seconds
	(For HA NN:) dfs.nameservices	none

Using a Cluster with High Availability Name Nodes

If your Hadoop cluster uses High Availability (HA) Name Nodes, verify that the dfs.nameservices parameter and the individual name nodes are defined in hdfs-site.xml.

Using More Than One Hadoop Cluster

In some cases, a Vertica cluster requires access to more than one HDFS cluster. For example, your business might use separate HDFS clusters for separate regions, or you might need data from both test and deployment clusters.

To support multiple clusters, perform the following steps:

1. Copy the configuration files from all HDFS clusters to your database nodes. You can place the copied files in any location readable by Vertica. However, as a best practice, you should place them all in the same directory tree, with one subdirectory per HDFS cluster. The locations must be the same on all database nodes.

2. Set the `HadoopConfDir` configuration parameter. The value is a colon-separated path containing the directories for all of your HDFS clusters.
3. Use an explicit name node or name service in the URL when creating an external table or copying data. Do not use `hdfs://` because it could be ambiguous. For more information about URLs, see [URL Format](#).

Vertica connects directly to a name node or name service; it does not otherwise distinguish among HDFS clusters. Therefore, names of HDFS name nodes and name services must be globally unique.

Updating Configuration Files

If you update the configuration files after starting Vertica, use the following statement to refresh them:

```
=> SELECT CLEAR_HDFS_CACHES();
```

The [CLEAR_HDFS_CACHES](#) function also flushes information about which Name Node is active in a High Availability (HA) Hadoop cluster. Therefore, the first `hdfs` request after calling this function is slow, because the initial connection to the Name Node can take more than 15 seconds.

Troubleshooting Reads from the `hdfs` Scheme

You might encounter the following issues when using the `hdfs` URL scheme to access data in HDFS.

WebHDFS Error When Using `hdfs` URLs

When creating an external table or loading data and using the `hdfs` scheme, you might see errors from WebHDFS failures. Such errors indicate that Vertica was not able to use the `hdfs` scheme and fell back to `webhdfs`, but that the WebHDFS configuration is incorrect. Verify that the HDFS configuration files in `HadoopConfDir` have the correct WebHDFS configuration for your Hadoop cluster. See [Configuring the `hdfs` Scheme](#) for information about use of these files. See your Hadoop documentation for information about WebHDFS configuration.

Queries Take a Long Time to Run When Using HA

The High Availability Name Node feature in HDFS allows a name node to fail over to a standby name node. The `dfs.client.failover.max.attempts` configuration parameter (in `hdfs-site.xml`) specifies how many attempts to make when failing over. Vertica uses a default value of 4 if this parameter is not set. After reaching the maximum number of failover attempts, Vertica concludes that the HDFS cluster is unavailable and aborts the operation. A second parameter, `ipc.client.connect.retry.interval`, specifies the time to wait between attempts, with typical values being 10 to 20 seconds.

Cloudera and Hortonworks both provide tools to automatically generate configuration files. These tools can set the maximum number of failover attempts to a much higher number (50 or 100). If the HDFS cluster is unavailable (all name nodes are unreachable), Vertica can appear to hang for an extended period (minutes to hours) while trying to connect.

Failover attempts are logged in the [QUERY_EVENTS](#) system table. The following example shows how to query this table to find these events:

```
=> SELECT event_category, event_type, event_description, operator_name,
event_details, count(event_type) AS count
FROM query_events
WHERE event_type ilike 'LibHDFS++ FAILOVER RETRY'
GROUP BY event_category, event_type, event_description, operator_name, event_details;
-[ RECORD 1 ]-----+-----
event_category      | EXECUTION
event_type          | LibHDFS++ FAILOVER RETRY
event_description   | LibHDFS++ Namenode failover and retry.
operator_name       | LibHDFS++ FileSystem
event_details       | Libhdfs++ request failed on ns
count               | 4
```

You can either wait for Vertica to complete or abort the connection, or set the `dfs.client.failover.max.attempts` parameter to a lower value.

Reading Hadoop Columnar File Formats

For data in certain Hadoop columnar formats, you can create external tables or copy data into Vertica directly, without going through Hive to get the metadata. Currently, Vertica supports direct reading for the ORC (Optimized Row Columnar) and Parquet formats. Vertica can read ORC and Parquet data from a local file system or from HDFS.

Vertica can also export data in the Parquet format. See [Exporting Data](#).

Requirements

ORC or Parquet files must not use complex data types. Vertica supports all simple data types supported in Hive version 0.11 or later.

Files compressed by Hive or Impala require Zlib (GZIP) or Snappy compression. Vertica does not support LZO compression for these formats.

Creating External Tables

In the [CREATE EXTERNAL TABLE AS COPY](#) statement, specify a format of ORC or PARQUET as follows:

```
=> CREATE EXTERNAL TABLE tableName (columns)
    AS COPY FROM path ORC[(hive_partition_cols=partitions)];
=> CREATE EXTERNAL TABLE tableName (columns)
    AS COPY FROM path PARQUET[(hive_partition_cols=partitions)];
```

Set the value of *path* based on where the file is located. If the file resides:

- On the local file system of the node where you issue the command—Use a local file path. Escape special characters in file paths with backslashes.
- In HDFS—Use the `hdfs` scheme and then append the file path. Escape special characters in HDFS paths using URL encoding. HDFS URLs usually begin with `hdfs://`. See [Reading Directly from HDFS](#) for more information about URL format.

When defining an external table, you must define all of the data columns in the file. You may omit partition columns. Unlike with some other data sources, you cannot select only the data columns of interest. If you omit data columns, the ORC or Parquet reader aborts with an error.

If the data is partitioned you must alter the path value and specify the `hive_partition_cols` argument for the ORC or PARQUET parameter. You must also list partitioned columns last in `columns`. See [Using Partition Columns](#).

If `path` is a path on the local file system on a Vertica node, specify the node using ON NODE in the COPY statement. Do not use COPY LOCAL. If `path` is in HDFS, COPY defaults to ON ANY NODE so you do not need to specify it.

Files stored in HDFS are governed by HDFS privileges. For files stored on the local disk, however, Vertica requires that users be granted access. All users who have administrative privileges have access. For other users, you must create a storage location and grant access to it. See [CREATE EXTERNAL TABLE AS COPY](#). Only users who have access to both the Vertica user storage location and the HDFS directory can read from the table.

Loading Data

In the `COPY` statement, specify a format of ORC or PARQUET:

```
=> COPY tableName FROM path ORC[(hive_partition_cols='partitions')];  
=> COPY tableName FROM path PARQUET[(hive_partition_cols='partitions')];
```

As with external tables, `path` may be a local or `hdfs` : `path`. For information about the `hive_partition_cols` parameter, see [Using Partition Columns](#).

Be aware that if you load from multiple files in the same COPY statement, and any of them is aborted, the entire load aborts. This behavior differs from that for delimited files, where the COPY statement loads what it can and ignores the rest.

Supported Data Types

Vertica can natively read columns of all data types supported in Hive version 0.11 and later except for complex types. If the data contains complex types such as maps, the COPY or CREATE EXTERNAL TABLE AS COPY statement aborts with an error message. Vertica does not attempt to read only some columns; either the entire file is read or the operation fails. For a complete list of supported types, see [HIVE Data Types](#).

Examples

The following example shows how you can read from all ORC files in a local directory. This example uses all supported data types.

```
=> CREATE EXTERNAL TABLE t (a1 TINYINT, a2 SMALLINT, a3 INT, a4 BIGINT, a5 FLOAT,  
                             a6 DOUBLE PRECISION, a7 BOOLEAN, a8 DATE, a9 TIMESTAMP,  
                             a10 VARCHAR(20), a11 VARCHAR(20), a12 CHAR(20), a13 BINARY(20),  
                             a14 DECIMAL(10,5))  
    AS COPY FROM '/data/orc_test_*.orc' ORC;
```

The following example shows how to use a name service with the `hdfs` scheme. This example assumes that the name service, `hadoopNS`, is defined in the Hadoop configuration files that were copied to the Vertica cluster.

```
=> CREATE EXTERNAL TABLE tt (a1 INT, a2 VARCHAR(20))  
    AS COPY FROM 'hdfs://hadoopNS/data/file.parquet' PARQUET;
```

Using Partition Columns

An ORC or Parquet file contains data columns. To these files you can add partition columns at write time. The data files do not store values for partition columns; instead, when writing the files you divide them into groups (partitions) based on column values. You can use partitioning to improve the performance of queries that restrict results by the partitioned column.

For example, if you have a table with a date column, and you know you will be writing queries restricted to particular dates, you can partition by date. Thus, Vertica can skip reading some files entirely when executing your date-restricted queries. This behavior is called partition pruning.

You can create partitions regardless of where you store the files—in HDFS, on a local file system, or in a shared file system such as NFS.

You can use Hive or the Vertica Parquet Writer to create partitions, or you can create them manually. See [Partitioning Hive Tables](#) for information about tuning partitions.

Partition Structure

By default, both Hive and Vertica write Hadoop columnar format files that contain the data for all table columns without partitioning. The column data is laid out in stripes, or groups of row

data. When Vertica loads this data it reads all of the stripes.

If you partition the data, however, you can avoid writing some of that data into the files and thus reduce the amount to be read. Instead of storing a column's data in the files, you create a directory structure that partitions the data based on the value in a column.

For example, if the data includes a date column, you can write each date as a separate partition. Each partition is a directory with a name of the form "column=value". If you have a date column named "created" that is partitioned by day, you would have the following directory structure:

```
path/created=2016-11-01/*
path/created=2016-11-02/*
path/created=2016-11-03/*
path/...
```

As this example shows, the files in each subdirectory contain all columns *except* the "created" column.

You can partition by more than one column, creating a layered structure. For example, adding another partitioned column, "region", to the preceding example would produce the following directory structure:

```
path/created=2016-11-01/region=northeast/*
path/created=2016-11-01/region=central/*
path/created=2016-11-01/region=southeast/*
path/created=2016-11-01/...
path/created=2016-11-02/region=northeast/*
path/created=2016-11-02/region=central/*
path/created=2016-11-02/region=southeast/*
path/created=2016-11-02/...
path/created=2016-11-03/...
path/...
```

With this change, the data files contain all columns except "created" and "region".

Note: The files must contain at least one real (not partitioned) column. You cannot partition by every column in a table.

You can create partitions for columns of any simple data type. As a best practice, however, you should avoid partitioning columns with BOOLEAN, FLOAT, and NUMERIC types. Vertica does not prune partitions of these types, so they do not provide a performance advantage.

Under some circumstances Hive writes a partition with a value of `__HIVE_DEFAULT_PARTITION__`. Vertica treats these values as NULL.

COPY Syntax

When creating an external table from partitioned data, you must do all of the following:

- In the column definition in the table, list the partition columns last and in order.
- In the path, use wildcards to include all of the levels of directories and files.
- In the ORC or PARQUET statement, specify the partition columns, in order, in the `hive_partition_cols` parameter. (The argument name is the same even if you didn't use Hive to do the partitioning; it refers to Hive-style partitions.)

The following example creates an external table using the partitioned data shown previously. The table includes four columns. Two columns, "id" and "name", are in the data files. The other two, "created" and "region", are partitioned.

```
=> CREATE EXTERNAL TABLE t (id int, name varchar(50), created date, region varchar(50))
  AS COPY FROM 'hdfs:///path/**/*'
  ORC(hive_partition_cols='created,region');
```

The path includes one wildcard (*) for each level of directory partitioning and then one more for the files. The number of wildcards must always be one more than the number of partitioned columns.

You do not need to include all of the partitioned columns in `hive_partition_cols` if those columns are not relevant for your queries. However, the partition columns must be the last columns in the table definition. For example, you can define the following table for the partitioned data shown previously:

```
=> CREATE EXTERNAL TABLE t2 (id int, name varchar(50), created date, region varchar(50))
  AS COPY FROM 'hdfs:///path/**/*' ORC(hive_partition_cols='region');
```

Values in the "created" column are all null because no data appears in the files for that column and `hive_partition_cols` does not include it.

However, the following example produces an error.

```
=> CREATE EXTERNAL TABLE t3 (id int, name varchar(50), created date, region varchar(50))
  AS COPY FROM 'hdfs:///path/**/*' ORC(hive_partition_cols='created');
```

In this example, the table definition includes the "region" column after the "created" column, and "region" is not included in `hive_partition_cols`. Because this column is not listed as a partition column, Vertica interprets it as a data column and produces an error because the column is not present.

If Vertica cannot convert a partition value to the declared type for that column, it sets the value to NULL. The following example incorrectly declares region to be an integer rather than a varchar.

```
=> CREATE EXTERNAL TABLE t4 (id int, name varchar(50), created date, region int)
AS COPY FROM 'hdfs:///path/**/*/' ORC(hive_partition_cols='region');
```

Vertica cannot coerce a directory named "region=northeast" into an integer value, so it sets that column value to NULL for all rows it reads from this directory. If you declare the column with IS NOT NULL, Vertica rejects the row. If the number of rows exceeds REJECTMAX, Vertica reports an error.

Note: If you change how files are partitioned on disk, you must re-create your external tables.

Queries

When executing queries with predicates, Vertica skips subdirectories that do not satisfy the predicate. This process is called *partition pruning* and it can significantly improve query performance. See [Improving Query Performance for Data Stored in HDFS](#) for more information about partition pruning and other techniques for optimizing queries.

The following example reads only the partitions for the specified region, for all dates. Although the data is also partitioned by date, the query does not restrict the date.

```
=> SELECT * FROM t WHERE region='northeast';
```

To verify that Vertica is pruning partitions, look in the explain plan for a message similar to the following:

```
files with unmatched Hive partition have been pruned
```

Improving Query Performance for Data Stored in HDFS

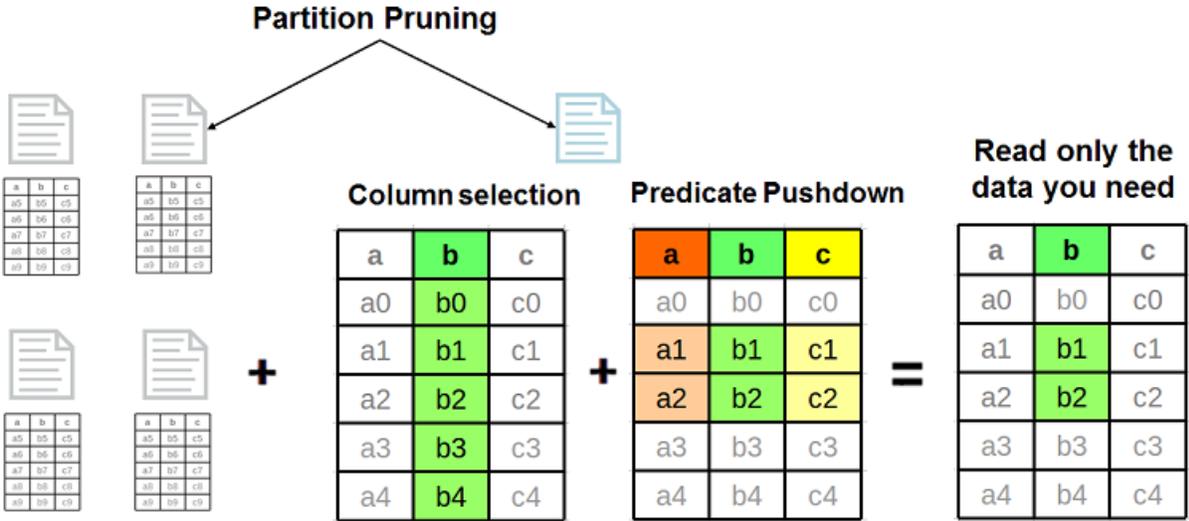

When working with external tables in Hadoop columnar formats, Vertica tries to improve performance in the following ways:

- By pushing query execution closer to the data so less has to be read and transmitted. Vertica uses the following specific techniques: predicate pushdown, column selection, and

partition pruning.

- By taking advantage of data locality in the query plan.
- By analyzing the row count to get the best join orders in the query plan.

The following figure illustrates optimizations that can reduce the amount of data to be read:

Tuning ORC Stripes and Parquet Rowgroups

Vertica can read ORC and Parquet files generated by any Hive version. However, newer Hive versions store more metadata in these files. This metadata is used by both Hive and Vertica to prune values and to read only the required data. Use the latest Hive version to store data in these formats. ORC and Parquet are fully forward- and backward-compatible. To get the best performance, use Hive 0.14 or later.

The ORC format splits a table into groups of rows called stripes and stores column-level metadata in each stripe. The Parquet format splits a table into groups of rows called rowgroups and stores column-level metadata in each rowgroup. Each stripe/rowgroup's metadata is used during predicate evaluation to determine whether the values from this stripe need to be read. Large stripes usually yield better performance, so set the stripe size to at least 256M.

Hive writes ORC stripes and Parquet rowgroups to HDFS, which stores data in HDFS blocks distributed among multiple physical data nodes. Accessing an HDFS block requires opening a separate connection to the corresponding data node. It is advantageous to ensure that an ORC stripe or Parquet rowgroup does not span more than one HDFS block. To do so, set the HDFS block size to be larger than the stripe/rowgroup size. Setting HDFS block size to 512M is usually sufficient.

Hive provides three compression options: None, Snappy, and Zlib. Use Snappy or Zlib compression to reduce storage and I/O consumption. Usually, Snappy is less CPU-intensive but can yield lower compression ratios compared to Zlib.

Storing data in sorted order can improve data access and predicate evaluation performance. Sort table columns based on the likelihood of their occurrence in query predicates; columns that most frequently occur in comparison or range predicates should be sorted first.

Partitioning tables is a very useful technique for data organization. Similarly to sorting tables by columns, partitioning can improve data access and predicate evaluation performance. Vertica supports Hive-style partitions and partition pruning.

The following Hive statement creates an ORC table with stripe size 256M and Zlib compression:

```
hive> CREATE TABLE customer_visits (  
    customer_id bigint,  
    visit_num int,  
    page_view_dt date)  
    STORED AS ORC tblproperties("orc.compress"="ZLIB",  
    "orc.stripe.size"="268435456");
```

The following statement creates a Parquet table with stripe size 256M and Zlib compression:

```
hive> CREATE TABLE customer_visits (  
    customer_id bigint,  
    visit_num int,  
    page_view_dt date)  
    STORED AS PARQUET tblproperties("parquet.compression"="ZLIB",  
    "parquet.stripe.size"="268435456");
```

Predicate Pushdown and Column Selection

Predicate pushdown moves parts of the query execution closer to the data, reducing the amount of data that must be read from disk or across the network. ORC files have three levels of indexing: file statistics, stripe statistics, and row group indexes. Predicates are applied only to the first two levels. Parquet files have two levels of statistics: rowgroup statistics and page statistics. Predicates are only applied to the first level.

Predicate pushdown is automatically applied for files written with Hive version 0.14 and later. ORC files written with earlier versions of Hive might not contain the required statistics. When executing a query against a file that lacks these statistics, Vertica logs an `EXTERNAL_PREDICATE_PUSHDOWN_NOT_SUPPORTED` event in the [QUERY_EVENTS](#) system table. If you are seeing performance problems with your queries, check this table for these events.

Another query performance optimization technique used by Vertica is *column selection*. Vertica reads from ORC or Parquet files only the columns specified in the query statement. For

example, the following statement reads only the `customer_id` and `visit_num` columns from the corresponding ORC files:

```
=> CREATE EXTERNAL TABLE customer_visits (  
    customer_id bigint,  
    visit_num int,  
    page_view_dt date)  
    AS COPY FROM '...' ORC;  
  
=> SELECT customer_id from customer_visits  
    WHERE visit_num > 10;
```

Data Locality

In a cluster where Vertica nodes are co-located on HDFS nodes, the query can use data locality to improve performance. For Vertica to do so, *both* the following conditions must exist::

- The data is on an HDFS node where a database node is also present.
- The query is not restricted to specific nodes using `ON NODE`.

When both these conditions exist, the query planner uses the co-located database node to read that data locally, instead of making a network call.

You can see how much data is being read locally by inspecting the query plan. The label for `LoadStep(s)` in the plan contains a statement of the form: "X% of ORC/Parquet data matched with co-located Vertica nodes". To increase the volume of local reads, consider adding more database nodes. HDFS data, by its nature, can't be moved to specific nodes, but if you run more database nodes you increase the likelihood that a database node is local to one of the copies of the data.

Creating Sorted Files in Hive

Unlike Vertica, Hive does not store table columns in separate files and does not create multiple projections per table with different sort orders. For efficient data access and predicate pushdown, sort Hive table columns based on the likelihood of their occurrence in query predicates. Columns that most frequently occur in comparison or range predicates should be sorted first.

Data can be inserted into Hive tables in a sorted order by using the `ORDER BY` or `SORT BY` keywords. For example, to insert data into the ORC table "customer_visit" from another table "visits" with the same columns, use these keywords with the `INSERT INTO` command:

```
hive> INSERT INTO TABLE customer_visits
      SELECT * from visits
      ORDER BY page_view_dt;
```

```
hive> INSERT INTO TABLE customer_visits
      SELECT * from visits
      SORT BY page_view_dt;
```

The difference between the two keywords is that ORDER BY guarantees global ordering on the entire table by using a single MapReduce reducer to populate the table. SORT BY uses multiple reducers, which can cause ORC or Parquet files to be sorted by the specified column(s) but not be globally sorted. Using the latter keyword can increase the time taken to load the file.

You can combine clustering and sorting to sort a table globally. The following table definition adds a hint that data is inserted into this table bucketed by customer_id and sorted by page_view_dt:

```
hive> CREATE TABLE customer_visits_bucketed (
      customer_id bigint,
      visit_num int,
      page_view_dt date)
      CLUSTERED BY (page_view_dt)
      SORTED BY (page_view_dt) INTO 10 BUCKETS
      STORED AS ORC;
```

When inserting data into the table, you must explicitly specify the clustering and sort columns, as in the following example:

```
hive> INSERT INTO TABLE customer_visits_bucketed
      SELECT * from visits
      DISTRIBUTE BY page_view_dt
      SORT BY page_view_dt;
```

The following statement is equivalent:

```
hive> INSERT INTO TABLE customer_visits_bucketed
      SELECT * from visits
      CLUSTER BY page_view_dt;
```

Both of the above commands insert data into the customer_visits_bucketed table, globally sorted on the page_view_dt column.

Partitioning Hive Tables

Table partitioning in Hive is an effective technique for data separation and organization, as well as for reducing storage requirements. To partition a table in Hive, include it in the PARTITIONED BY clause:

```
hive> CREATE TABLE customer_visits (  
        customer_id bigint,  
        visit_num int)  
    PARTITIONED BY (page_view_dt date)  
    STORED AS ORC;
```

Hive does not materialize partition column(s). Instead, it creates subdirectories of the following form:

```
path_to_table/partition_column_name=value/
```

When the table is queried, Hive parses the subdirectories' names to materialize the values in the partition columns. The value materialization in Hive is a plain conversion from a string to the appropriate data type.

Inserting data into a partitioned table requires specifying the value(s) of the partition column (s). The following example creates two partition subdirectories, "customer_visits/page_view_dt=2016-02-01" and "customer_visits/page_view_dt=2016-02-02":

```
hive> INSERT INTO TABLE customer_visits  
    PARTITION (page_view_dt='2016-02-01')  
    SELECT customer_id, visit_num from visits  
    WHERE page_view_dt='2016-02-01'  
    ORDER BY page_view_dt;  
  
hive> INSERT INTO TABLE customer_visits  
    PARTITION (page_view_dt='2016-02-02')  
    SELECT customer_id, visit_num from visits  
    WHERE page_view_dt='2016-02-02'  
    ORDER BY page_view_dt;
```

Each directory contains ORC files with two columns, customer_id and visit_num.

Accessing Partitioned Data from Vertica

Vertica recognizes and supports Hive-style partitions. You can read partition values and data using the HCatalog Connector or the COPY statement.

If you use the HCatalog Connector, you must create an HCatalog schema in Vertica that mirrors a schema in Hive:

```
=> CREATE EXTERNAL TABLE customer_visits (customer_id int, visit_num int,  
        page_view_dtm date)  
    AS COPY FROM 'hdfs://host:port/path/customer_visits/*/*' ORC  
    (hive_partition_cols='page_view_dtm');
```

The following statement reads all ORC files stored in all sub-directories including the partition values:

```
=> SELECT customer_id, visit_num, page_view FROM customer_visits;
```

When executing queries with predicates on partition columns, Vertica uses the subdirectory names to skip files that do not satisfy the predicate. This process is called *partition pruning*.

You can also define a separate external table for each subdirectory, as in the following example:

```
=> CREATE EXTERNAL TABLE customer_visits_20160201 (customer_id int,
        visit_num int, page_view_dtm date)
    AS COPY FROM
    'hdfs://host:port/path/customer_visits/page_view_dt=2016-02-01/*' ORC;
```

Example: A Partitioned, Sorted ORC Table

Suppose you have data stored in CSV files containing three columns: `customer_id`, `visit_num`, `page_view_dtm`:

```
1,123,2016-01-01
33,1,2016-02-01
2,57,2016-01-03
...
```

The goal is to create the following Hive table:

```
hive> CREATE TABLE customer_visits (
        customer_id bigint,
        visit_num int)
    PARTITIONED BY (page_view_dt date)
    STORED AS ORC;
```

To achieve this, perform the following steps:

1. Copy or move the CSV files to HDFS.
2. Define a textfile Hive table and copy the CSV files into it:

```
hive> CREATE TABLE visits (
        customer_id bigint,
        visit_num int,
        page_view_dt date)
    ROW FORMAT DELIMITED FIELDS TERMINATED BY ','
    STORED AS TEXTFILE;

hive> LOAD DATA INPATH path_to_csv_files INTO TABLE visits;
```

3. For each unique value in `page_view_dt`, insert the data into the target table while materializing `page_view_dt` as `page_view_dtm`:

```
hive> INSERT INTO TABLE customer_visits
      PARTITION (page_view_dt='2016-01-01')
      SELECT customer_id, visit_num FROM visits
      WHERE page_view_dt='2016-01-01'
      ORDER BY page_view_dt;
...
```

This operation inserts data from `visits.customer_id` into `customer_visits.customer_id`, and from `visits.visit_num` into `customer_visits.visit_num`. These two columns are stored in generated ORC files. Simultaneously, values from `visits.page_view_dt` are used to create partitions for the partition column `customer_visits.page_view_dt`, which is not stored in the ORC files.

Data Modification in Hive

Hive is well-suited for reading large amounts of write-once data. Its optimal usage is loading data in bulk into tables and never modifying the data. In particular, for data stored in the ORC and Parquet formats, this usage pattern produces large, globally (or nearly globally) sorted files.

Periodic addition of data to tables (known as “trickle load”) is likely to produce many small files. The disadvantage of this is that Vertica has to access many more files during query planning and execution. These extra access can result in longer query-processing time. The major performance degradation comes from the increase in the number of file seeks on HDFS.

Hive can also modify underlying ORC or Parquet files without user involvement. If enough records in a Hive table are modified or deleted, for example, Hive deletes existing files and replaces them with newly-created ones. Hive can also be configured to automatically merge many small files into a few larger files.

When new tables are created, or existing tables are modified in Hive, you must manually synchronize Vertica to keep it up to date. The following statement synchronizes the Vertica schema "hcat" after a change in Hive:

```
=> SELECT sync_with_hcatalog_schema('hcat_local', 'hcat');
```

Schema Evolution in Hive

Hive supports two kinds of schema evolution:

1. New columns can be added to existing tables in Hive. Vertica automatically handles this kind of schema evolution. The old records display NULLs for the newer columns.
2. The type of a column for a table can be modified in Hive. Vertica does not support this kind of schema evolution.

The following example demonstrates schema evolution through new columns. In this example, `hcat.parquet.txt` is a file with the following values:

```
-1|0.65|0.65|6|'b'
```

```
hive> create table hcat.parquet_tmp (a int, b float, c double, d int, e varchar(4))
      row format delimited fields terminated by '|' lines terminated by '\n';

hive> load data local inpath 'hcat.parquet.txt' overwrite into table
      hcat.parquet_tmp;

hive> create table hcat.parquet_evolve (a int) partitioned by (f int) stored as
      parquet;
hive> insert into table hcat.parquet_evolve partition (f=1) select a from
      hcat.parquet_tmp;
hive> alter table hcat.parquet_evolve add columns (b float);
hive> insert into table hcat.parquet_evolve partition (f=2) select a, b from
      hcat.parquet_tmp;
hive> alter table hcat.parquet_evolve add columns (c double);
hive> insert into table hcat.parquet_evolve partition (f=3) select a, b, c from
      hcat.parquet_tmp;
hive> alter table hcat.parquet_evolve add columns (d int);
hive> insert into table hcat.parquet_evolve partition (f=4) select a, b, c, d from
      hcat.parquet_tmp;
hive> alter table hcat.parquet_evolve add columns (e varchar(4));
hive> insert into table hcat.parquet_evolve partition (f=5) select a, b, c, d, e
      from hcat.parquet_tmp;
hive> insert into table hcat.parquet_evolve partition (f=6) select a, b, c, d, e
      from hcat.parquet_tmp;
```

```
=> SELECT * from hcat_local.parquet_evolve;
```

a	b	c	d	e	f
-1					1
-1	0.649999976158142				2
-1	0.649999976158142	0.65			3

Troubleshooting Reads from Native File Formats

You might encounter the following issues when reading ORC or Parquet files.

Reads from Parquet Files Report Unexpected Data-Type Mismatches

If a Parquet file contains a column of type `STRING` but the column in Vertica is of a different type, such as `INT`, you might see an unclear error message. In this case Vertica reports the column in the Parquet file as `BYTE_ARRAY`, as shown in the following example:

```
ERROR 0: Datatype mismatch: column 2 in the parquet_cpp source
[/tmp/nation.0.parquet] has type BYTE_ARRAY, expected int
```

This behavior is specific to Parquet files; with an ORC file the type is correctly reported as `STRING`. The problem occurs because Parquet does not natively support the `STRING` type and uses `BYTE_ARRAY` for strings instead. Because the Parquet file reports its type as `BYTE_ARRAY`, Vertica has no way to determine if the type is actually a `BYTE_ARRAY` or a `STRING`.

Time Zones in Timestamp Values Are Not Correct

Reading time stamps from an ORC or Parquet file in Vertica might result in different values, based on the local time zone. This issue occurs because the ORC and Parquet formats do not support the SQL `TIMESTAMP` data type. If you define the column in your table with the `TIMESTAMP` data type, Vertica interprets time stamps read from ORC or Parquet files as values in the local time zone. This same behavior occurs in Hive. When this situation occurs, Vertica produces a warning at query time, such as the following:

```
WARNING 0: SQL TIMESTAMPTZ is more appropriate for ORC TIMESTAMP
because values are stored in UTC
```

When creating the table in Vertica, you can avoid this issue by using the `TIMESTAMPTZ` data type instead of `TIMESTAMP`.

Some Date and Timestamp Values Are Wrong by Several Days

When Hive writes ORC or Parquet files, it converts dates before 1583 from the Gregorian calendar to the Julian calendar. Vertica does not perform this conversion. If your file contains dates before this time, values in Hive and the corresponding values in Vertica can differ by up to ten days. This difference applies to both DATE and TIMESTAMP values.

Error 7087: Wrong Number of Columns

When loading data, you might see an error stating that you have the wrong number of columns:

```
=> CREATE TABLE nation (nationkey bigint, name varchar(500),
                        regionkey bigint, comment varchar(500));
CREATE TABLE

=> COPY nation from :orc_dir ORC;
ERROR 7087: Attempt to load 4 columns from an orc source
[/tmp/orc_glob/test.orc] that has 9 columns
```

When you load data from Hadoop native file formats, your table must consume all of the data in the file, or this error results. To avoid this problem, add the missing columns to your table definition.

Error 7226: Cannot Find Partition Column

When querying data, you might see an error message stating that a partition column is missing:

```
ERROR 7226: Cannot find partition column [region] in parquet source
[/data/table_int/int_original/000000_0]
```

This error can occur if you partition your ORC or Parquet data (see [Using Partition Columns](#)). If you create an external table and then change the partition structure, for example by renaming a column, you must then re-create the external table. If you see this error, update your table to match the partitioning on disk.

Error 6766: Is a Directory

When querying data that is stored on the local disk, you might see an error message stating that an input file is a directory:

```
ERROR 6766: Error reading from orc parser input stream  
[/tmp/orc_glob/more_nations]: Is a directory
```

This error occurs if the glob in the table's COPY FROM clause matches an empty directory. This error occurs only for files in the Linux file system; empty directories in HDFS are ignored.

To correct the error, make the glob more specific. Instead of *, for example, use *.orc.

Exporting Data

You might want to export data from Vertica, either to share it with other Hadoop-based applications or to move lower-priority data from ROS to less-expensive storage. You can use the [EXPORT TO PARQUET](#) statement to export a table (or part of one) as Parquet data.

You can export data to HDFS or to the local file system. You can export ROS data or data that is readable through external tables. After exporting ROS data, you can drop affected ROS partitions to reclaim storage space. If you need to access the data in Vertica again, you can create external tables from the exported data.

To export data, use EXPORT TO PARQUET in combination with a SELECT statement, as in the following example:

```
=> EXPORT TO PARQUET(directory='hdfs:///data/sales_data')
  AS SELECT * FROM public.sales;
  Rows Exported
  -----
                14336
(1 row)
```

The directory argument specifies where to write the files and is required. The directory must not already exist.

You can use EXPORT TO PARQUET to write queries across multiple tables in Vertica and export the results. With this approach you can take advantage of powerful, fast query execution in Vertica while making the results available to other Hadoop clients:

```
=> EXPORT TO PARQUET(directory='hdfs:///data/sales_by_region')
  AS SELECT sale.price, sale.date, store.region
  FROM public.sales sale
  JOIN public.vendor store ON sale.distribID = store.ID;
  Rows Exported
  -----
                23301
(1 row)
```

EXPORT TO PARQUET takes optional parameters to specify compression format and row-group size (in MB), as in the following example:

```
=> EXPORT TO PARQUET(directory='hdfs:///data/sales_data',
                    compression = 'uncompressed', rowGroupSize = '32')
  AS SELECT * FROM public.sales;
  Rows Exported
  -----
                14336
(1 row)
```

The default compression type is Snappy.

The row-group size affects memory consumption during export. An export thread consumes at least 64MB of RAM if the value is 64. The default value of 64 is a compromise between writing larger row groups and allowing enough free memory for other Vertica operations. If you perform exports when the database is not otherwise under heavy load, you can improve read performance later by increasing row-group size on export.

When exporting, you can use the optional `OVER` clause to specify how to partition and/or sort data. Partitioning reduces the sizes of the output data files and can improve performance when Vertica queries external tables containing this data. (See [Using Partition Columns](#).) If you do not specify how to partition the data, Vertica optimizes the export for maximum parallelism.

To specify partition columns, use `PARTITION BY` in the `OVER` clause as in the following example:

```
=> EXPORT TO PARQUET(directory = 'hdfs:///data/export')
  OVER(PARTITION BY date) AS SELECT date, price FROM public.sales;
Rows Exported
-----
          28337
(1 row)
```

You can sort values within each partition for a further performance improvement. Sort table columns based on the likelihood of their occurrence in query predicates; columns that most frequently occur in comparison or range predicates should be sorted first. You can sort values within each partition using `ORDER BY` in the `OVER` clause:

```
=> EXPORT TO PARQUET(directory = 'hdfs:///data/export')
  OVER(PARTITION BY date ORDER BY price) AS SELECT date, price FROM public.sales;
Rows Exported
-----
          28337
(1 row)
```

You can use `ORDER BY` even without partitioning. Storing data in sorted order can improve data access and predicate evaluation performance.

Targets in the `OVER` clause must be column references; they cannot be expressions. For more information about `OVER`, see [SQL Analytics](#).

If you are exporting data to a local file system, you might want to force a single node to write all of the files. To do so, use an empty `OVER` clause.

You cannot export columns with the `TIME`, `TIMEZ`, and `INTERVAL` data types. If your table includes columns of these types, exclude them by explicitly selecting the columns you can export:

```
=> EXPORT TO PARQUET(directory='hdfs:///data/sales_data')
  AS SELECT date, transactionID, price FROM public.sales;
Rows Exported
-----
          14336
```

(1 row)

You can only perform one export per output directory. If you perform more than one concurrent export to the same directory, only one will succeed.

Using the HCatalog Connector

The Vertica HCatalog Connector lets you access data stored in Apache's Hive data warehouse software the same way you access it within a native Vertica table.

If your files are in the Optimized Columnar Row (ORC) or Parquet format and do not use complex types, the HCatalog Connector creates an external table and uses the ORC or Parquet reader instead of using the Java SerDe. See [Reading Hadoop Columnar File Formats](#) for more information about these readers.

The HCatalog Connector performs predicate pushdown to improve query performance. Instead of reading all data across the network to evaluate a query, the HCatalog Connector moves the evaluation of predicates closer to the data. Predicate pushdown applies to Hive partition pruning, ORC stripe pruning, and Parquet row-group pruning. The HCatalog Connector supports predicate pushdown for the following predicates: $>$, $>=$, $=$, $<>$, $<=$, $<$.

Hive, HCatalog, and HiveServer2 Overview

There are several Hadoop components that you need to understand to use the HCatalog connector:

- Apache's Hive lets you query data stored in a Hadoop Distributed File System (HDFS) the same way you query data stored in a relational database. Behind the scenes, Hive uses a set of serializer and deserializer (SerDe) classes to extract data from files stored in HDFS and break it into columns and rows. Each SerDe handles data files in a specific format. For example, one SerDe extracts data from comma-separated data files while another interprets data stored in JSON format.
- Apache HCatalog is a component of the Hadoop ecosystem that makes Hive's metadata available to other Hadoop components (such as Pig).
- HiveServer2 makes HCatalog and Hive data available via JDBC. Through it, a client can make requests to retrieve data stored in Hive, as well as information about the Hive schema.

The Vertica HCatalog Connector lets you transparently access data that is available through HiveServer2. You use the connector to define a schema in Vertica that corresponds to a Hive database or schema. When you query data within this schema, the HCatalog Connector transparently extracts and formats the data from Hadoop into tabular data.

Note: You can use the WebHCat service instead of HiveServer2, but performance is usually better with HiveServer2. To use WebHCat, set the `HCatalogConnectorUseHiveServer2` configuration parameter to 0. See [Hadoop Parameters](#).

HCatalog Connection Features

The HCatalog Connector lets you query data stored in Hive using the Vertica native SQL syntax. Some of its main features are:

- The HCatalog Connector always reflects the current state of data stored in Hive.
- The HCatalog Connector uses the parallel nature of both Vertica and Hadoop to process Hive data. The result is that querying data through the HCatalog Connector is often faster than querying the data directly through Hive.
- Because Vertica performs the extraction and parsing of data, the HCatalog Connector does not significantly increase the load on your Hadoop cluster.
- The data you query through the HCatalog Connector can be used as if it were native Vertica data. For example, you can execute a query that joins data from a table in an HCatalog schema with a native table.

HCatalog Connector Considerations

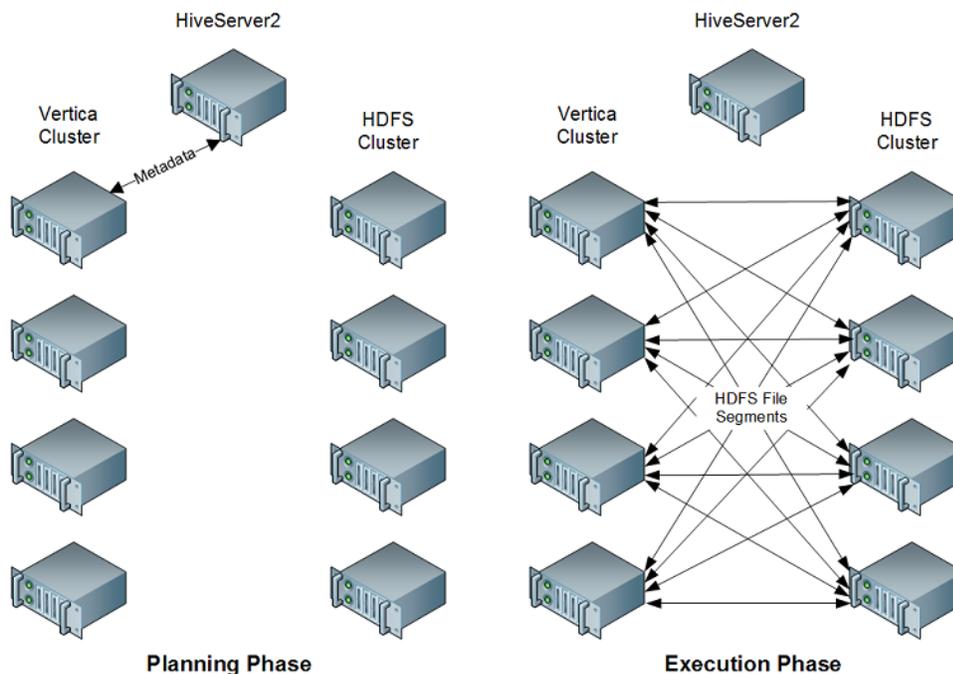

There are a few things to keep in mind when using the HCatalog Connector:

- Hive's data is stored in flat files in a distributed filesystem, requiring it to be read and deserialized each time it is queried. This deserialization causes Hive performance to be much slower than that of Vertica. The HCatalog Connector has to perform the same process as Hive to read the data. Therefore, querying data stored in Hive using the HCatalog Connector is much slower than querying a native Vertica table. If you need to perform extensive analysis on data stored in Hive, you should consider loading it into Vertica. Vertica optimization often makes querying data through the HCatalog Connector faster than directly querying it through Hive.
- Hive supports complex data types such as lists, maps, and structs that Vertica does not support. Columns containing these data types are converted to a JSON representation of the data type and stored as a VARCHAR. See [Data Type Conversions from Hive to Vertica](#).

Note: The HCatalog Connector is read-only. It cannot insert data into Hive.

How the HCatalog Connector Works

When planning a query that accesses data from a Hive table, the Vertica HCatalog Connector on the initiator node contacts HiveServer2 (or WebHCat) in your Hadoop cluster to determine if the table exists. If it does, the connector retrieves the table's metadata from the metastore database so the query planning can continue. When the query executes, all nodes in the Vertica cluster directly retrieve the data necessary for completing the query from HDFS. They then use the Hive SerDe classes to extract the data so the query can execute. When accessing data in ORC or Parquet format, the HCatalog Connector uses the readers for these formats instead of the Hive SerDe classes.

This approach takes advantage of the parallel nature of both Vertica and Hadoop. In addition, by performing the retrieval and extraction of data directly, the HCatalog Connector reduces the impact of the query on the Hadoop cluster.

HCatalog Connector Requirements

Before you can use the HCatalog Connector, both your Vertica and Hadoop installations must meet the following requirements.

Vertica Requirements

All of the nodes in your cluster must have a Java Virtual Machine (JVM) installed. You must use the same Java version that the Hadoop cluster uses. See [Installing the Java Runtime on Your Vertica Cluster](#).

You must also add certain libraries distributed with Hadoop and Hive to your Vertica installation directory. See [Configuring Vertica for HCatalog](#).

Hadoop Requirements

Your Hadoop cluster must meet several requirements to operate correctly with the Vertica Connector for HCatalog:

- It must have Hive, HiveServer2, and HCatalog installed and running. See Apache's [HCatalog](#) page for more information.
- The HiveServer2 server and all of the HDFS nodes that store HCatalog data must be directly accessible from all of the hosts in your Vertica database. Verify that any firewall separating the Hadoop cluster and the Vertica cluster will pass HiveServer2, metastore database, and HDFS traffic.
- The data that you want to query must be in an internal or external Hive table.
- When using the ORC and Parquet readers through the HCatalog Connector, partitioned data must be located in the default file location. If you have moved partitions, set the Vertica configuration parameters `HCatalogConnectorUseORCReader` and `HCatalogConnectorUseParquetReader` to 0 to use the Java UDX for these formats. Querying ORC and Parquet data through the Java UDX is slower than using the built-in readers.
- If a table you want to query uses a non-standard SerDe, you must install the SerDe's classes on your Vertica cluster before you can query the data. See [Using Nonstandard SerDes](#).

Installing the Java Runtime on Your Vertica Cluster

The HCatalog Connector requires a 64-bit Java Virtual Machine (JVM). The JVM must support Java 6 or later, and must be the same version as the one installed on your Hadoop nodes.

Note: If your Vertica cluster is configured to execute User Defined Extensions (UDxs) written in Java, it already has a correctly-configured JVM installed. See [Developing User-Defined Extensions \(UDxs\)](#) in Extending Vertica for more information.

Installing Java on your Vertica cluster is a two-step process:

1. Install a Java runtime on all of the hosts in your cluster.
2. Set the `JavaBinaryForUDx` configuration parameter to tell Vertica the location of the Java executable.

Installing a Java Runtime

For Java-based features, Vertica requires a 64-bit Java 6 (Java version 1.6) or later Java runtime. Vertica supports runtimes from either Oracle or [OpenJDK](#). You can choose to install either the Java Runtime Environment (JRE) or Java Development Kit (JDK), since the JDK also includes the JRE.

Many Linux distributions include a package for the OpenJDK runtime. See your Linux distribution's documentation for information about installing and configuring OpenJDK.

To install the Oracle Java runtime, see the [Java Standard Edition \(SE\) Download Page](#). You usually run the installation package as root in order to install it. See the download page for instructions.

Once you have installed a JVM on each host, ensure that the `java` command is in the search path and calls the correct JVM by running the command:

```
$ java -version
```

This command should print something similar to:

```
java version "1.8.0_102"  
Java(TM) SE Runtime Environment (build 1.8.0_102-b14)
```

```
Java HotSpot(TM) 64-Bit Server VM (build 25.102-b14, mixed mode)
```

Note: Any previously installed Java VM on your hosts may interfere with a newly installed Java runtime. See your Linux distribution's documentation for instructions on configuring which JVM is the default. Unless absolutely required, you should uninstall any incompatible version of Java before installing the Java 6 or Java 7 runtime.

Setting the JavaBinaryForUDx Configuration Parameter

The JavaBinaryForUDx configuration parameter tells Vertica where to look for the JRE to execute Java UDxs. After you have installed the JRE on all of the nodes in your cluster, set this parameter to the absolute path of the Java executable. You can use the symbolic link that some Java installers create (for example `/usr/bin/java`). If the Java executable is in your shell search path, you can get the path of the Java executable by running the following command from the Linux command line shell:

```
$ which java
/usr/bin/java
```

If the `java` command is not in the shell search path, use the path to the Java executable in the directory where you installed the JRE. Suppose you installed the JRE in `/usr/java/default` (which is where the installation package supplied by Oracle installs the Java 1.6 JRE). In this case the Java executable is `/usr/java/default/bin/java`.

You set the configuration parameter by executing the following statement as a database superuser:

```
=> ALTER DATABASE mydb SET JavaBinaryForUDx = '/usr/bin/java';
```

See [ALTER DATABASE](#) for more information on setting configuration parameters.

To view the current setting of the configuration parameter, query the [CONFIGURATION_PARAMETERS](#) system table:

```
=> \x
Expanded display is on.
=> SELECT * FROM CONFIGURATION_PARAMETERS WHERE parameter_name = 'JavaBinaryForUDx';
-[ RECORD 1 ]-----+-----
node_name          | ALL
parameter_name     | JavaBinaryForUDx
current_value      | /usr/bin/java
default_value      |
change_under_support_guidance | f
change_requires_restart | f
description        | Path to the java binary for executing UDx written in Java
```

Once you have set the configuration parameter, Vertica can find the Java executable on each node in your cluster.

Note: Since the location of the Java executable is set by a single configuration parameter for the entire cluster, you must ensure that the Java executable is installed in the same path on all of the hosts in the cluster.

Configuring Vertica for HCatalog

Before you can use the HCatalog Connector, you must add certain Hadoop and Hive libraries to your Vertica installation. You must also copy the Hadoop configuration files that specify various connection properties. Vertica uses the values in those configuration files to make its own connections to Hadoop.

You need only make these changes on one node in your cluster. After you do this you can install the HCatalog connector.

Copy Hadoop Libraries and Configuration Files

Vertica provides a tool, `hcatUtil`, to collect the required files from Hadoop. This tool copies selected libraries and XML configuration files from your Hadoop cluster to your Vertica cluster. This tool might also need access to additional libraries:

- If you plan to use Hive to query files that use Snappy compression, you need access to the Snappy native libraries, `libhadoop*.so` and `libsnapappy*.so`.
- If you plan to use Hive to query files that use LZO compression, you need access to the `hadoop-lzo-*.jar` and `libgplcompression.so*` libraries. In `core-site.xml` you must also edit the `io.compression.codecs` property to include `com.hadoop.compression.lzo.LzopCodec`.
- If you plan to use a JSON SerDe with a Hive table, you need access to its library. This is the same library that you used to configure Hive; for example:

```
hive> add jar /home/release/json-serde-1.3-jar-with-dependencies.jar;

hive> create external table nationjson (id int,name string,rank int,text string)
ROW FORMAT SERDE 'org.openx.data.jsonserde.JsonSerDe'
LOCATION '/user/release/vt/nationjson';
```

- If you are using any other libraries that are not standard across all supported Hadoop versions, you need access to those libraries.

If any of these cases applies to you, do one of the following:

- Include the path(s) in the path you specify as the value of `--hcatLibPath`, or
- Copy the file(s) to a directory already on that path.

If Vertica is not co-located on a Hadoop node, you should do the following:

1. Copy `/opt/vertica/packages/hcat/tools/hcatUtil` to a Hadoop node and run it there, specifying a temporary output directory. Your Hadoop, HIVE, and HCatalog lib paths might be different. In newer versions of Hadoop the HCatalog directory is usually a subdirectory under the HIVE directory, and Cloudera creates a new directory for each revision of the configuration files. Use the values from your environment in the following command:

```
hcatUtil --copyJars
--hadoopHiveHome="$HADOOP_HOME/lib;$HIVE_HOME/lib;/hcatalog/dist/share"
--hadoopHiveConfPath="$HADOOP_CONF_DIR;$HIVE_CONF_DIR;$WEBHCAT_CONF_DIR"
--hcatLibPath="/tmp/hadoop-files"
```

2. Verify that all necessary files were copied:

```
hcatUtil --verifyJars --hcatLibPath=/tmp/hadoop-files
```

3. Copy that output directory (`/tmp/hadoop-files`, in this example) to `/opt/vertica/packages/hcat/lib` on the Vertica node you will connect to when installing the HCatalog connector. If you are updating a Vertica cluster to use a new Hadoop cluster (or a new version of Hadoop), first remove all JAR files in `/opt/vertica/packages/hcat/lib` except `vertica-hcatalogudl.jar`.

4. Verify that all necessary files were copied:

```
hcatUtil --verifyJars --hcatLibPath=/opt/vertica/packages/hcat
```

If Vertica is co-located on some or all Hadoop nodes, you can do this in one step on a shared node. Your Hadoop, HIVE, and HCatalog lib paths might be different; use the values from your environment in the following command:

```
hcatUtil --copyJars
--hadoopHiveHome="$HADOOP_HOME/lib;$HIVE_HOME/lib;/hcatalog/dist/share"
--hadoopHiveConfPath="$HADOOP_CONF_DIR;$HIVE_CONF_DIR;$WEBHCAT_CONF_DIR"
--hcatLibPath="/opt/vertica/packages/hcat/lib"
```

The `hcatUtil` script has the following arguments:

<p><code>-c, --copyJars</code></p>	<p>Copy the required JAR files from <code>hadoopHiveHome</code> and configuration files from <code>hadoopHiveConfPath</code>.</p>
<p><code>-v, --verifyJars</code></p>	<p>Verify that the required files are present in <code>hcatLibPath</code>. Check the output of <code>hcatUtil</code> for error and warning messages.</p>
<p><code>--hadoopHiveHome="value1;value2;..."</code></p>	<p>Paths to the Hadoop, Hive, and HCatalog home directories. Separate directories by semicolons (;). Enclose paths in double quotes.</p> <div style="background-color: #f0f0f0; padding: 5px; border: 1px solid #ccc;"> <p>Note: Always place <code>\$HADOOP_HOME</code> on the path before <code>\$HIVE_HOME</code>. In some Hadoop distributions, these two directories contain different versions of the same library.</p> </div>
<p><code>--hadoopHiveConfPath="value1;value2;..."</code></p>	<p>Paths of the following configuration files:</p> <ul style="list-style-type: none"> • <code>hive-site.xml</code> • <code>core-site.xml</code> • <code>yarn-site.xml</code> • <code>webhcat-site.xml</code> (optional with the default configuration; required if you use WebHCat instead of HiveServer2) • <code>hdfs-site.xml</code> <p>Separate directories by semicolons (;). Enclose paths in double quotes.</p> <p>In previous releases of Vertica this parameter was optional under some conditions. It is now required.</p>
<p><code>--hcatLibPath="value"</code></p>	<p>Output path for the libraries and configuration files. On a Vertica node, use <code>/opt/vertica/packages/hcat/lib</code>. If you have previously run <code>hcatUtil</code> with a different version of Hadoop, first remove the old JAR files from the output directory (all except <code>vertica-hcatalogudl.jar</code>).</p>

After you have copied the files and verified them, install the HCatalog connector.

Install the HCatalog Connector

On the same node where you copied the files from `hcatUtil`, install the HCatalog connector by running the `install.sql` script. This script resides in the `ddl/` folder under your HCatalog connector installation path. This script creates the library and `VHCatSource` and `VHCatParser`.

Note: The data that was copied using `hcatUtil` is now stored in the database. If you change any of those values in Hadoop, you need to rerun `hcatUtil` and `install.sql`. The following statement returns the names of the libraries and configuration files currently being used:

```
=> SELECT dependencies FROM user_libraries WHERE lib_name='VHCatalogLib';
```

Now you can create HCatalog schema parameters, which point to your existing Hadoop services, as described in [Defining a Schema Using the HCatalog Connector](#).

Upgrading to a New Version of Vertica

After upgrading to a new version of Vertica, perform the following steps:

1. Uninstall the HCatalog Connector using the `uninstall.sql` script. This script resides in the `ddl/` folder under your HCatalog connector installation path.
2. Delete the contents of the `hcatLibPath` directory except for `vertica-hcatalogudl.jar`.
3. Rerun `hcatUtil`.
4. Reinstall the HCatalog Connector using the `install.sql` script.

For more information about upgrading Vertica, see [Upgrade Vertica](#).

Additional Options for Hadoop Columnar File Formats

When reading Hadoop columnar file formats (ORC or Parquet), the HCatalog Connector attempts to use the built-in readers. When doing so, it uses the `hdfs` scheme by default. In order to use the `hdfs` scheme, you must perform the configuration described in [Configuring the hdfs Scheme](#).

To have the HCatalog Connector use the `webhdfs` scheme instead, use `ALTER DATABASE` to set `HCatalogConnectorUseLibHDFSPP` to 0.

Using the HCatalog Connector with HA NameNode

Newer distributions of Hadoop support the High Availability NameNode (HA NN) for HDFS access. Some additional configuration is required to use this feature with the HCatalog Connector. If you do not perform this configuration, attempts to retrieve data through the connector will produce an error.

To use HA NN with Vertica, first copy `/etc/hadoop/conf` from the HDFS cluster to every node in your Vertica cluster. You can put this directory anywhere, but it must be in the same location on every node. (In the example below it is in `/opt/hcat/hadoop_conf`.)

Then uninstall the HCat library, configure the UDX to use that configuration directory, and reinstall the library:

```
=> \i /opt/vertica/packages/hcat/ddl/uninstall.sql
      DROP LIBRARY

=> ALTER DATABASE mydb SET JavaClassPathSuffixForUDx = '/opt/hcat/hadoop_conf';
      WARNING 2693: Configuration parameter JavaClassPathSuffixForUDx has been deprecated;
                  setting it has no effect

=> \i /opt/vertica/packages/hcat/ddl/install.sql
      CREATE LIBRARY
      CREATE SOURCE FUNCTION
      GRANT PRIVILEGE
      CREATE PARSER FUNCTION
      GRANT PRIVILEGE
```

Despite the warning message, this step is necessary.

After taking these steps, HCatalog queries will now work.

Defining a Schema Using the HCatalog Connector

After you set up the HCatalog Connector, you can use it to define a schema in your Vertica database to access the tables in a Hive database. You define the schema using the [CREATE HCATALOG SCHEMA](#) statement.

When creating the schema, you must supply the name of the schema to define in Vertica. Other parameters are optional. If you do not supply a value, Vertica uses default values. Vertica reads some default values from the HDFS configuration files.

After you define the schema, you can query the data in the Hive data warehouse in the same way you query a native Vertica table. The following example demonstrates creating an HCatalog schema and then querying several system tables to examine the contents of the new schema. See [Viewing Hive Schema and Table Metadata](#) for more information about these tables.

```
=> CREATE HCATALOG SCHEMA hcat WITH HOSTNAME='hcatost'
      HCATALOG_SCHEMA='default' HIVESERVER2_HOSTNAME='hs.example.com'
      HCATALOG_USER='admin';
WARNING 0:  HOSTNAME will be ignored. hive-site.xml must be contain property [hive.metastore.uris],
or both HOSTNAME and PORT must be specified
CREATE SCHEMA
=> \x
Expanded display is on.

=> SELECT * FROM v_catalog.hcatalog_schemata;
-[ RECORD 1 ]-----+-----
schema_id          | 45035996273748224

```

Querying Hive Tables Using HCatalog Connector

Once you have defined the HCatalog schema, you can query data from the Hive database by using the schema name in your query.

```
=> SELECT * from hcat.messages limit 10;  
messageid | userid | time | message  
-----+-----+-----+-----  
1 | nPfQ1ayhi | 2013-10-29 00:10:43 | hymenaeos cursus lorem Suspendis  
2 | N7svORIoZ | 2013-10-29 00:21:27 | Fusce ad sem vehicula morbi  
3 | 4VvzN3d | 2013-10-29 00:32:11 | porta Vivamus condimentum  
4 | heojkmTmc | 2013-10-29 00:42:55 | lectus quis imperdiet  
5 | coROws30F | 2013-10-29 00:53:39 | sit eleifend tempus a aliquam mauri  
6 | oDRP1i | 2013-10-29 01:04:23 | risus facilisis sollicitudin sceler  
7 | AU7a9Kp | 2013-10-29 01:15:07 | turpis vehicula tortor  
8 | ZJWg185DkZ | 2013-10-29 01:25:51 | sapien adipiscing eget Aliquam tor  
9 | E7ipAsYc3 | 2013-10-29 01:36:35 | varius Cum iaculis metus  
10 | kStCv | 2013-10-29 01:47:19 | aliquam libero nascetur Cum mal  
(10 rows)
```

Since the tables you access through the HCatalog Connector act like Vertica tables, you can perform operations that use both Hive data and native Vertica data, such as a join:

```
=> SELECT u.FirstName, u.LastName, d.time, d.Message from UserData u  
-> JOIN hcat.messages d ON u.UserID = d.UserID LIMIT 10;  
FirstName | LastName | time | Message  
-----+-----+-----+-----  
Whitney | Kerr | 2013-10-29 00:10:43 | hymenaeos cursus lorem Suspendis  
Troy | Oneal | 2013-10-29 00:32:11 | porta Vivamus condimentum  
Renee | Coleman | 2013-10-29 00:42:55 | lectus quis imperdiet  
Fay | Moss | 2013-10-29 00:53:39 | sit eleifend tempus a aliquam mauri  
Dominique | Cabrera | 2013-10-29 01:15:07 | turpis vehicula tortor

Cade | Barr | 2013-10-29 01:25:51 | sapien adipiscing eget Aliquam tor  
Oprah | Mcmillan | 2013-10-29 01:36:35 | varius Cum iaculis metus  
Astra | Sherman | 2013-10-29 01:58:03 | dignissim odio Pellentesque primis  
Chelsea | Malone | 2013-10-29 02:08:47 | pede tempor dignissim Sed luctus  
(10 rows)
```

Viewing Hive Schema and Table Metadata

When using Hive, you access metadata about schemas and tables by executing statements written in HiveQL (Hive's version of SQL) such as `SHOW TABLES`. When using the HCatalog Connector, you can get metadata about the tables in the Hive database through several Vertica system tables.

There are four system tables that contain metadata about the tables accessible through the HCatalog Connector:

- [HCATALOG_SCHEMATA](#) lists all of the schemas that have been defined using the HCatalog Connector.
- [HCATALOG_TABLE_LIST](#) contains an overview of all of the tables available from all schemas defined using the HCatalog Connector. This table only shows the tables that the user querying the table can access. The information in this table is retrieved using a single call to HiveServer2 for each schema defined using the HCatalog Connector, which means there is a little overhead when querying this table.
- [HCATALOG_TABLES](#) contains more in-depth information than [HCATALOG_TABLE_LIST](#).
- [HCATALOG_COLUMNS](#) lists metadata about all of the columns in all of the tables available through the HCatalog Connector. As for [HCATALOG_TABLES](#), querying this table results in one call to HiveServer2 per table, and therefore can take a while to complete.

The following example demonstrates querying the system tables containing metadata for the tables available through the HCatalog Connector.

```
=> CREATE HCATALOG SCHEMA hcat WITH hostname='hcat'
-> HCATALOG_SCHEMA='default' HCATALOG_DB='default' HCATALOG_USER='hcatuser';
CREATE SCHEMA
=> SELECT * FROM HCATALOG_SCHEMATA;
-[ RECORD 1 ]-----+-----
schema_id          | 45035996273864536
schema_name        | hcat
schema_owner_id   | 45035996273704962
schema_owner       | dbadmin
create_time        | 2013-11-05 10:19:54.70965-05
hostname           | hcat
port               | 9083
webservice_hostname | hcat
webservice_port    | 50111
hcatalog_schema_name | default
hcatalog_user_name  | hcatuser
metastore_db_name  | hivesmetastoredb
```

```
=> SELECT * FROM HCATALOG_TABLE_LIST;
-[ RECORD 1 ]-----+-----
table_schema_id | 45035996273864536
table_schema    | hcat
hcatalog_schema | default
table_name      | hcatalogtypes
hcatalog_user_name | hcatuser
-[ RECORD 2 ]-----+-----
table_schema_id | 45035996273864536
table_schema    | hcat
hcatalog_schema | default
table_name      | tweets
hcatalog_user_name | hcatuser
-[ RECORD 3 ]-----+-----
table_schema_id | 45035996273864536
table_schema    | hcat
hcatalog_schema | default

Synchronizing an HCatalog Schema or Table With a Local Schema or Table

Querying data from an HCatalog schema can be slow due to Hive performance issues. This slow performance can be especially annoying when you want to examine the structure of the tables in the Hive database. Getting this information from Hive requires you to query the HCatalog schema's metadata using the HCatalog Connector.

To avoid this performance problem you can use the [SYNC_WITH_HCATALOG_SCHEMA](#) function to create a snapshot of the HCatalog schema's metadata within a Vertica schema. You supply this function with the name of a pre-existing Vertica schema, typically the one created through `CREATE HCATALOG SCHEMA`, and a Hive schema available through the HCatalog Connector. The function creates a set of external tables within the Vertica schema that you can then use to examine the structure of the tables in the Hive database. Because the metadata in the Vertica schema is local, query planning is much faster. You can also use standard Vertica statements and system-table queries to examine the structure of Hive tables in the HCatalog schema.

Caution: The `SYNC_WITH_HCATALOG_SCHEMA` function overwrites tables in the Vertica schema whose names match a table in the HCatalog schema. Do not use the Vertica schema to store other data.

When `SYNC_WITH_HCATALOG_SCHEMA` creates tables in Vertica, it matches Hive's `STRING` and `BINARY` types to Vertica's `VARCHAR(65000)` and `VARBINARY(65000)` types. You might want to change these lengths, using [ALTER TABLE SET DATA TYPE](#), in two cases:

- If the value in Hive is larger than 65000 bytes, increase the size and use LONG VARCHAR or LONG VARBINARY to avoid data truncation. If a Hive string uses multi-byte encodings, you must increase the size in Vertica to avoid data truncation. This step is needed because Hive counts string length in characters while Vertica counts it in bytes.
- If the value in Hive is much smaller than 65000 bytes, reduce the size to conserve memory in Vertica.

The Vertica schema is just a snapshot of the HCatalog schema's metadata. Vertica does not synchronize later changes to the HCatalog schema with the local schema after you call `SYNC_WITH_HCATALOG_SCHEMA`. You can call the function again to re-synchronize the local schema to the HCatalog schema. If you altered column data types, you will need to repeat those changes because the function creates new external tables.

By default, `SYNC_WITH_HCATALOG_SCHEMA` does not drop tables that appear in the local schema that do not appear in the HCatalog schema. Thus, after the function call the local schema does not reflect tables that have been dropped in the Hive database since the previous call. You can change this behavior by supplying the optional third Boolean argument that tells the function to drop any table in the local schema that does not correspond to a table in the HCatalog schema.

Instead of synchronizing the entire schema, you can synchronize individual tables by using [SYNC_WITH_HCATALOG_SCHEMA_TABLE](#). If the table already exists in Vertica the function overwrites it. If the table is not found in the HCatalog schema, this function returns an error. In all other respects this function behaves in the same way as `SYNC_WITH_HCATALOG_SCHEMA`.

If you change the settings of any HCatalog Connector configuration parameters ([Hadoop Parameters](#)), you must call this function again.

Examples

The following example demonstrates calling `SYNC_WITH_HCATALOG_SCHEMA` to synchronize the HCatalog schema in Vertica with the metadata in Hive. Because it synchronizes the HCatalog schema directly, instead of synchronizing another schema with the HCatalog schema, both arguments are the same.

```
=> CREATE HCATALOG SCHEMA hcat WITH hostname='hcatost' HCATALOG_SCHEMA='default'  
-> HCATALOG_USER='hcatuser';  
CREATE SCHEMA  
=> SELECT sync_with_hcatalog_schema('hcat', 'hcat');  
sync_with_hcatalog_schema  
-----  
Schema hcat synchronized with hcat  
tables in hcat = 56
```

```

tables altered in hcat = 0
tables created in hcat = 56
stale tables in hcat = 0
table changes erred in hcat = 0
(1 row)

=> -- Use vsql's \d command to describe a table in the synced schema

=> \d hcat.messages
List of Fields by Tables
 Schema | Table | Column | Type | Size | Default | Not Null | Primary Key | Foreign
Key
-----+-----+-----+-----+-----+-----+-----+-----+-----
-----
hcat    | messages | id | int | 8 | | f | f |
hcat    | messages | userid | varchar(65000) | 65000 | | f | f |
hcat    | messages | "time" | varchar(65000) | 65000 | | f | f |
hcat    | messages | message | varchar(65000) | 65000 | | f | f |
(4 rows)

```

This example shows synchronizing with a schema created using CREATE HCATALOG SCHEMA. Synchronizing with a schema created using CREATE SCHEMA is also supported.

You can query tables in the local schema that you synchronized with an HCatalog schema. However, querying tables in a synchronized schema isn't much faster than directly querying the HCatalog schema, because SYNC_WITH_HCATALOG_SCHEMA only duplicates the HCatalog schema's metadata. The data in the table is still retrieved using the HCatalog Connector,

Data Type Conversions from Hive to Vertica

The data types recognized by Hive differ from the data types recognized by Vertica. The following table lists how the HCatalog Connector converts Hive data types into data types compatible with Vertica.

Hive Data Type	Vertica Data Type
TINYINT (1-byte)	TINYINT (8-bytes)
SMALLINT (2-bytes)	SMALLINT (8-bytes)
INT (4-bytes)	INT (8-bytes)
BIGINT (8-bytes)	BIGINT (8-bytes)
BOOLEAN	BOOLEAN
FLOAT (4-bytes)	FLOAT (8-bytes)

Hive Data Type	Vertica Data Type
DECIMAL (precision, scale)	DECIMAL (precision, scale)
DOUBLE (8-bytes)	DOUBLE PRECISION (8-bytes)
CHAR (length in characters)	CHAR (length in bytes)
VARCHAR (length in characters)	VARCHAR (length in bytes), if length <= 65000 LONG VARCHAR (length in bytes), if length > 65000
STRING (2 GB max)	VARCHAR (65000)
BINARY (2 GB max)	VARBINARY (65000)
DATE	DATE
TIMESTAMP	TIMESTAMP
LIST/ARRAY	VARCHAR (65000) containing a JSON-format representation of the list.
MAP	VARCHAR (65000) containing a JSON-format representation of the map.
STRUCT	VARCHAR (65000) containing a JSON-format representation of the struct.

Data-Width Handling Differences Between Hive and Vertica

The HCatalog Connector relies on Hive SerDe classes to extract data from files on HDFS. Therefore, the data read from these files are subject to Hive's data width restrictions. For example, suppose the SerDe parses a value for an INT column into a value that is greater than $2^{32}-1$ (the maximum value for a 32-bit integer). In this case, the value is rejected even if it would fit into a Vertica's 64-bit INTEGER column because it cannot fit into Hive's 32-bit INT.

Hive measures CHAR and VARCHAR length in characters and Vertica measures them in bytes. Therefore, if multi-byte encodings are being used (like Unicode), text might be truncated in Vertica.

Once the value has been parsed and converted to a Vertica data type, it is treated as native data. This treatment can result in some confusion when comparing the results of an identical

query run in Hive and in Vertica. For example, if your query adds two INT values that result in a value that is larger than $2^{32}-1$, the value overflows its 32-bit INT data type, causing Hive to return an error. When running the same query with the same data in Vertica using the HCatalog Connector, the value will probably still fit within Vertica's 64-int value. Thus the addition is successful and returns a value.

Using Nonstandard SerDes

Hive stores its data in unstructured flat files located in the Hadoop Distributed File System (HDFS). When you execute a Hive query, it uses a set of serializer and deserializer (SerDe) classes to extract data from these flat files and organize it into a relational database table. For Hive to be able to extract data from a file, it must have a SerDe that can parse the data the file contains. When you create a table in Hive, you can select the SerDe to be used for the table's data.

Hive has a set of standard SerDes that handle data in several formats such as delimited data and data extracted using regular expressions. You can also use third-party or custom-defined SerDes that allow Hive to process data stored in other file formats. For example, some commonly-used third-party SerDes handle data stored in JSON format.

The HCatalog Connector directly fetches file segments from HDFS and uses Hive's SerDes classes to extract data from them. The Connector includes all Hive's standard SerDes classes, so it can process data stored in any file that Hive natively supports. If you want to query data from a Hive table that uses a custom SerDe, you must first install the SerDe classes on the Vertica cluster.

Determining Which SerDe You Need

If you have access to the Hive command line, you can determine which SerDe a table uses by using Hive's SHOW CREATE TABLE statement. This statement shows the HiveQL statement needed to recreate the table. For example:

```
hive> SHOW CREATE TABLE msgjson;
OK
CREATE EXTERNAL TABLE msgjson(
  messageid int COMMENT 'from deserializer',
  userid string COMMENT 'from deserializer',
  time string COMMENT 'from deserializer',
  message string COMMENT 'from deserializer')
ROW FORMAT SERDE
'org.apache.hadoop.hive.contrib.serde2.JsonSerde'
STORED AS INPUTFORMAT
'org.apache.hadoop.mapred.TextInputFormat'
```

```
OUTPUTFORMAT
'org.apache.hadoop.hive.ql.io.HiveIgnoreKeyTextOutputFormat'
LOCATION
'hdfs://hivehost.example.com:8020/user/exampleuser/msgjson'
TBLPROPERTIES (
'transient_lastDdlTime'='1384194521')
Time taken: 0.167 seconds
```

In the example, `ROW FORMAT SERDE` indicates that a special SerDe is used to parse the data files. The next row shows that the class for the SerDe is named `org.apache.hadoop.hive.contrib.serde2.JsonSerde`. You must provide the HCatalog Connector with a copy of this SerDe class so that it can read the data from this table.

You can also find out which SerDe class you need by querying the table that uses the custom SerDe. The query will fail with an error message that contains the class name of the SerDe needed to parse the data in the table. In the following example, the portion of the error message that names the missing SerDe class is in bold.

```
=> SELECT * FROM hcat.jsontable;
ERROR 3399: Failure in UDX RPC call InvokePlanUDL(): Error in User Defined
Object [VHCatSource], error code: 0
com.vertica.sdk.UdfException: Error message is [

SerDe com.cloudera.hive.serde.JSONSerde does not exist) ] HINT If error
message is not descriptive or local, may be we cannot read metadata from hive
metastore service thrift://hcathost:9083 or HDFS namenode (check
UDXLogs/UDXFencedProcessesJava.log in the catalog directory for more information)
at com.vertica.hcatalogudl.HCatalogSplitsNoOpSourceFactory
.plan(HCatalogSplitsNoOpSourceFactory.java:98)
at com.vertica.udxfence.UDXExecContext.planUDSource(UDXExecContext.java:898)
. . .
```

Installing the SerDe on the Vertica Cluster

You usually have two options to getting the SerDe class file the HCatalog Connector needs:

- Find the installation files for the SerDe, then copy those over to your Vertica cluster. For example, there are several third-party JSON SerDes available from sites like Google Code and GitHub. You may find the one that matches the file installed on your Hive cluster. If so, then download the package and copy it to your Vertica cluster.
- Directly copy the JAR files from a Hive server onto your Vertica cluster. The location for the SerDe JAR files depends on your Hive installation. On some systems, they may be located in `/usr/lib/hive/lib`.

Wherever you get the files, copy them into the `/opt/vertica/packages/hcat/lib` directory on every node in your Vertica cluster.

Important: If you add a new host to your Vertica cluster, remember to copy every custom SerDer JAR file to it.

Troubleshooting HCatalog Connector Problems

You may encounter the following issues when using the HCatalog Connector.

Connection Errors

When you use `CREATE HCATALOG SCHEMA` to create a new schema, the HCatalog Connector does not immediately attempt to connect to the HiveServer2 or metastore servers. Instead, when you execute a query using the schema or HCatalog-related system tables, the connector attempts to connect to and retrieve data from your Hadoop cluster.

The types of errors you get depend on which parameters are incorrect. Suppose you have incorrect parameters for the metastore database, but correct parameters for HiveServer2. In this case, HCatalog-related system table queries succeed, while queries on the HCatalog schema fail. The following example demonstrates creating an HCatalog schema with the correct default HiveServer2 information. However, the port number for the metastore database is incorrect.

```
=> CREATE HCATALOG SCHEMA hcat2 WITH hostname='hcahost'
-> HCATALOG_SCHEMA='default' HCATALOG_USER='hive' PORT=1234;
CREATE SCHEMA
=> SELECT * FROM HCATALOG_TABLE_LIST;
-[ RECORD 1 ]-----+-----
table_schema_id    | 45035996273864536
table_schema       | hcat2
hcatalog_schema    | default
table_name         | test
hcatalog_user_name | hive

=> SELECT * FROM hcat2.test;
ERROR 3399: Failure in UDX RPC call InvokePlanUDL(): Error in User Defined
Object [VHCatSource], error code: 0
com.vertica.sdk.UdfException: Error message is [
org.apache.hcatalog.common.HCatException : 2004 : HCatOutputFormat not
initialized, setOutput has to be called. Cause : java.io.IOException:
MetaException(message:Could not connect to meta store using any of the URIs
provided. Most recent failure: org.apache.thrift.transport.TTTransportException:
```

```
java.net.ConnectException:  
Connection refused  
at org.apache.thrift.transport.TSocket.open(TSocket.java:185)  
at org.apache.hadoop.hive.metastore.HiveMetaStoreClient.open(  
HiveMetaStoreClient.java:277)  
... .
```

To resolve these issues, you must drop the schema and recreate it with the correct parameters. If you still have issues, determine whether there are connectivity issues between your Vertica cluster and your Hadoop cluster. Such issues can include a firewall that prevents one or more Vertica hosts from contacting the HiveServer2, metastore, or HDFS hosts.

You may also see this error if you are using HA NameNode, particularly with larger tables that HDFS splits into multiple blocks. See [Using the HCatalog Connector with HA NameNode](#) for more information about correcting this problem.

UDx Failure When Querying Data: Error 3399

You might see an error message when querying data (as opposed to metadata like schema information). This might be accompanied by a `ClassNotFoundException` in the log. This can happen for the following reasons:

- You are not using the same version of Java on your Hadoop and Vertica nodes. In this case you need to change one of them to match the other.
- You have not used `hcatUtil` to copy all Hadoop and Hive libraries and configuration files to Vertica, or you ran `hcatutil` and then changed your version of Hadoop or Hive.
- You upgraded Vertica to a new version and did not rerun `hcatutil` and reinstall the HCatalog Connector.
- The version of Hadoop you are using relies on a third-party library that you must copy manually.
- You are reading files with LZO compression and have not copied the libraries or set the `io.compression.codecs` property in `core-site.xml`.
- You are reading Parquet data from Hive, and columns were added to the table after some data was already present in the table. Adding columns does not update existing data, and the `ParquetSerDe` provided by Hive and used by the HCatalog Connector does not handle this case. This error is due to a limitation in Hive and there is no workaround.

- The query is taking too long and is timing out. If this is a frequent problem, you can increase the value of the `UDxFencedBlockTimeout` configuration parameter. See [General Parameters](#).

If you did not copy the libraries or configure LZO compression, follow the instructions in [Configuring Vertica for HCatalog](#).

If the Hive jars that you copied from Hadoop are out of date, you might see an error message like the following:

```
ERROR 3399: Failure in UDx RPC call InvokePlanUDL(): Error in User Defined Object [VHCatSource],
error code: 0 Error message is [ Found interface org.apache.hadoop.mapreduce.JobContext, but
class was expected ]
HINT hive metastore service is thrift://localhost:13433 (check UDxLogs/UDxFencedProcessesJava.log
in the catalog directory for more information)
```

This error usually signals a problem with `hive-hcatalog-core.jar`. Make sure you have an up-to-date copy of this file. Remember that if you rerun `hcatUtil` you also need to re-create the HCatalog schema.

You might also see a different form of this error:

```
ERROR 3399: Failure in UDx RPC call InvokePlanUDL(): Error in User Defined Object [VHCatSource],
error code: 0 Error message is [ javax/servlet/Filter ]
```

This error can be reported even if `hcatUtil` reports that your libraries are up to date. The `javax.servlet.Filter` class is in a library that some versions of Hadoop use but that is not usually part of the Hadoop installation directly. If you see an error mentioning this class, locate `servlet-api-*.jar` on a Hadoop node and copy it to the `hcat/lib` directory on all database nodes. If you cannot locate it on a Hadoop node, locate and download it from the Internet. (This case is rare.) The library version must be 2.3 or higher.

After you have copied the jar to the `hcat/lib` directory, reinstall the HCatalog connector as explained in [Configuring Vertica for HCatalog](#).

SerDe Errors

Errors can occur if you attempt to query a Hive table that uses a nonstandard SerDe. If you have not installed the SerDe JAR files on your Vertica cluster, you receive an error similar to the one in the following example:

```
=> SELECT * FROM hcat.jsontable;
ERROR 3399: Failure in UDx RPC call InvokePlanUDL(): Error in User Defined
Object [VHCatSource], error code: 0
com.vertica.sdk.UdfException: Error message is [
```

```
org.apache.hcatalog.common.HCatException : 2004 : HCatOutputFormat not
initialized, setOutput has to be called. Cause : java.io.IOException:
java.lang.RuntimeException:
MetaException(message:org.apache.hadoop.hive.serde2.SerDeException
SerDe com.cloudera.hive.serde.JSONSerDe does not exist) ] HINT If error
message is not descriptive or local, may be we cannot read metadata from hive
metastore service thrift://hcathost:9083 or HDFS namenode (check
UDxLogs/UDxFencedProcessesJava.log in the catalog directory for more information)
at com.vertica.hcatalogudl.HCatalogSplitsNoOpSourceFactory
.plan(HCatalogSplitsNoOpSourceFactory.java:98)
at com.vertica.udxfence.UDxExecContext.planUDSource(UDxExecContext.java:898)
. . .
```

In the error message, you can see that the root cause is a missing SerDe class (shown in bold). To resolve this issue, install the SerDe class on your Vertica cluster. See [Using Nonstandard SerDes](#) for more information.

This error may occur intermittently if just one or a few hosts in your cluster do not have the SerDe class.

Differing Results Between Hive and Vertica Queries

Sometimes, running the same query on Hive and on Vertica through the HCatalog Connector can return different results. This discrepancy is often caused by the differences between the data types supported by Hive and Vertica. See [Data Type Conversions from Hive to Vertica](#) for more information about supported data types.

If Hive string values are being truncated in Vertica, this might be caused by multi-byte character encodings in Hive. Hive reports string length in characters, while Vertica records it in bytes. For a two-byte encoding such as Unicode, you need to double the column size in Vertica to avoid truncation.

Discrepancies can also occur if the Hive table uses partition columns of types other than string.

HCatalog Connector Installation Fails on MapR

If you mount a MapR file system as an NFS mount point and then install the HCatalog Connector, it could fail with a message like the following:

```
ROLLBACK 2929: Couldn't create new UDx side process,
failed to get UDx side process info from zygote: Broken pipe
```

This might be accompanied by an error like the following in dbLog:

```
java.io.IOException: Couldn't get lock for /home/dbadmin/node02_
catalog/UDxLogs/UDxFencedProcessesJava.log
    at java.util.logging.FileHandler.openFiles(FileHandler.java:389)
    at java.util.logging.FileHandler.<init>(FileHandler.java:287)
    at com.vertica.udxfence.UDxLogger.setup(UDxLogger.java:78)
    at com.vertica.udxfence.UDxSideProcess.go(UDxSideProcess.java:75)
    ...
```

This error occurs if you locked your NFS mount point when creating it. Locking is the default. If you use the HCatalog Connector with MapR mounted as an NFS mount point, you must create the mount point with the `-o noLock` option. For example:

```
sudo mount -o noLock -t nfs MaprCLDBserviceHostname:/mapr/ClusterName/vertica/${hostname -f}/ vertica
```

You can use the HCatalog Connector with MapR without mounting the MapR file system. If you mount the MapR file system, you must do so without a lock.

Preventing Excessive Query Delays

Network issues or high system loads on the HiveServer2 server can cause long delays while querying a Hive database using the HCatalog Connector. While Vertica cannot resolve these issues, you can set parameters that limit how long Vertica waits before canceling a query on an HCatalog schema. You can set these parameters globally using Vertica configuration parameters. You can also set them for specific HCatalog schemas in the [CREATE HCATALOG SCHEMA](#) statement. These specific settings override the settings in the configuration parameters.

The `HCatConnectionTimeout` configuration parameter and the `CREATE HCATALOG SCHEMA` statement's `HCATALOG_CONNECTION_TIMEOUT` parameter control how many seconds the HCatalog Connector waits for a connection to the HiveServer2 server. A value of 0 (the default setting for the configuration parameter) means to wait indefinitely. If the server does not respond by the time this timeout elapses, the HCatalog Connector breaks the connection and cancels the query. If you find that some queries on an HCatalog schema pause excessively, try setting this parameter to a timeout value, so the query does not hang indefinitely.

The `HCatSlowTransferTime` configuration parameter and the `CREATE HCATALOG SCHEMA` statement's `HCATALOG_SLOW_TRANSFER_TIME` parameter specify how long the HCatalog Connector waits for data after making a successful connection to the server. After the specified time has elapsed, the HCatalog Connector determines whether the data transfer rate from the server is at least the value set in the `HCatSlowTransferLimit` configuration parameter (or by the `CREATE HCATALOG SCHEMA` statement's `HCATALOG_SLOW_TRANSFER_LIMIT` parameter). If it is not, then the HCatalog Connector terminates the connection and cancels the query.

You can set these parameters to cancel queries that run very slowly but do eventually complete. However, query delays are usually caused by a slow connection rather than a problem establishing the connection. Therefore, try adjusting the slow transfer rate settings first. If you find the cause of the issue is connections that never complete, you can alternately adjust the Linux TCP socket timeouts to a suitable value instead of relying solely on the `HCatConnectionTimeout` parameter.

Using HDFS Storage Locations

Vertica stores data in its native format, ROS, in storage locations. You can place storage locations on the local Linux file system or in HDFS. If you are using Premium Edition, you typically use HDFS storage locations for lower-priority data. Doing so frees space on your Vertica cluster for higher-priority data. If you are using Vertica for SQL on Apache Hadoop, you typically place ROS data only on HDFS.

If you use any HDFS storage locations, the HDFS data must be available at the time you start Vertica. Your HDFS cluster must be operational, and the ROS files must be present. If you have moved data files, or if they have become corrupted, or if your HDFS cluster is not responsive, Vertica cannot start.

Requirements for HDFS Storage Locations

Caution:

If you use any HDFS storage locations, the HDFS data must be available at the time you start Vertica. Your HDFS cluster must be operational, and the ROS files must be present. If you have moved data files, or if they have become corrupted, or if your HDFS cluster is not responsive, Vertica cannot start.

To store Vertica's data on HDFS, verify that:

- Your Hadoop cluster has WebHDFS enabled.
- All of the nodes in your Vertica cluster can connect to all of the nodes in your Hadoop cluster. Any firewall between the two clusters must allow connections on the ports used by HDFS. See [Testing Your Hadoop WebHDFS Configuration](#) for a procedure to test the connectivity between your Vertica and Hadoop clusters.
- If your HDFS cluster is unsecured, you have a Hadoop user whose username matches the name of the Vertica database administrator (usually named dbadmin). This Hadoop user must have read and write access to the HDFS directory where you want Vertica to store its data.
- If your HDFS cluster uses Kerberos authentication, you have a Kerberos principal for Vertica, and it has read and write access to the HDFS directory that will be used for the storage location. See [Configuring Kerberos](#). The Kerberos KDC must also be running.

- Your HDFS cluster has enough storage available for Vertica data. See [HDFS Space Requirements](#) below for details.
- The data you store in an HDFS-backed storage location does not expand your database's size beyond any data allowance in your Vertica license. Vertica counts data stored in an HDFS-backed storage location as part of any data allowance set by your license. See [Managing Licenses](#) in the Administrator's Guide for more information.

HDFS Space Requirements

If your Vertica database is K-safe, HDFS-based storage locations contain two copies of the data you store in them. One copy is the primary projection, and the other is the buddy projection. If you have enabled HDFS's data-redundancy feature, Hadoop stores both projections multiple times. This duplication might seem excessive. However, it is similar to how a RAID level 1 or higher stores redundant copies of both the primary and buddy projections. The redundant copies also help the performance of HDFS by enabling multiple nodes to process a request for a file.

Verify that your HDFS installation has sufficient space available for redundant storage of both the primary and buddy projections of your K-safe data. You can adjust the number of duplicates stored by HDFS by setting the `HadoopFSReplication` configuration parameter. See [Troubleshooting HDFS Storage Locations](#) for details.

Additional Requirements for Backing Up Data Stored on HDFS

To back up your data stored in HDFS storage locations, your Hadoop cluster must have snapshotting enabled for the directories to be used for backups. The easiest way to do this is to give the database administrator's account superuser privileges in Hadoop, so that snapshotting can be set automatically. Alternatively, use Hadoop to enable snapshotting for each directory before using it for backups.

In addition, your Vertica database must:

- Have enough Hadoop components and libraries installed to run the `Hadoop distcp` command as the Vertica database-administrator user (usually `dbadmin`).
- Have the `JavaBinaryForUDx` and `HadoopHome` configuration parameters set correctly.

Caution: After you have created an HDFS storage location, full database backups will fail with the error message:

```
ERROR 5127: Unable to create snapshot No such file /usr/bin/hadoop:  
check the HadoopHome configuration parameter
```

This error is caused by the backup script not being able to back up the HDFS storage locations. You must configure Vertica and Hadoop to enable the backup script to back these locations. After you configure Vertica and Hadoop, you can once again perform full database backups.

See [Backing Up HDFS Storage Locations](#) for details on configuring your Vertica and Hadoop clusters to enable HDFS storage location backup.

Best Practices for SQL on Apache Hadoop

If you are using the Vertica for SQL on Apache Hadoop product, Micro Focus recommends the following best practices for storage locations:

- Place only data type storage locations on HDFS storage.
- Place temp space directly on the local Linux file system, not in HDFS.
- For the best performance, place the Vertica catalog directly on the local Linux file system.
- Create the database first on a local Linux file system. Then, you can extend the database to HDFS storage locations and set storage policies that exclusively place data blocks on the HDFS storage location.
- For better performance, if you are running Vertica only on a subset of the HDFS nodes, do not run the HDFS balancer on them. The HDFS balancer can move data blocks farther away, causing Vertica to read non-local data during query execution. Queries run faster if they do not require network I/O.

Generally, HDFS requires approximately 2 GB of memory for each node in the cluster. To support this requirement in your Vertica configuration:

1. Create a 2-GB resource pool.
2. Do not assign any Vertica execution resources to this pool. This approach reserves the space for use by HDFS.

Alternatively, use Ambari or Cloudera Manager to find the maximum heap size required by HDFS and set the size of the resource pool to that value.

For more about how to configure resource pools, see [Managing Workloads](#).

How the HDFS Storage Location Stores Data

Vertica stores data in storage locations on HDFS similarly to the way it stores data in the Linux file system. See [Managing Storage Locations](#) in the Administrator's Guide for more information about storage locations. When you create a storage location on HDFS, Vertica stores the ROS containers holding its data on HDFS. You can choose which data uses the HDFS storage location: from the data for just a single table or partition to all of the database's data.

When Vertica reads data from or writes data to an HDFS storage location, the node storing or retrieving the data contacts the Hadoop cluster directly to transfer the data. If a single ROS container file is split among several HDFS nodes, the Vertica node connects to each of them. The Vertica node retrieves the pieces and reassembles the file. Because each node fetches its own data directly from the source, data transfers are parallel, increasing their efficiency. Having the Vertica nodes directly retrieve the file splits also reduces the impact on the Hadoop cluster.

What You Can Store in HDFS

Use HDFS storage locations to store only data. You cannot store catalog information in an HDFS storage location.

Caution: While it is possible to use an HDFS storage location for temporary data storage, you must never do so. Using HDFS for temporary storage causes severe performance issues.

What HDFS Storage Locations Cannot Do

Because Vertica uses storage locations to store ROS containers in a proprietary format, MapReduce and other Hadoop components cannot access your Vertica ROS data stored in HDFS. Never allow another program that has access to HDFS to write to the ROS files. Any outside modification of these files can lead to data corruption and loss. Applications must use the [Vertica client libraries](#) to access Vertica data. If you want to share ROS data with other Hadoop components, you can export it (see [Exporting Data](#)).

The storage location stores and reads only ROS containers. It cannot read data stored in native formats in HDFS. See [Hadoop Interfaces](#) for other ways to read data stored in HDFS.

Creating an HDFS Storage Location

Use the [CREATE LOCATION](#) statement to create an HDFS storage location. Make the following changes from creating local storage locations:

- For the path, use the WebHDFS URI for the HDFS directory where you want Vertica to store the location's data. This URI is the same as a standard HDFS URL, except it uses the `webhdfs://` protocol and its path does not start with `/webhdfs/v1/`.
- Include the `ALL NODES SHARED` keywords, as all HDFS storage locations are shared storage. This is required even if you have only one HDFS node in your cluster.

Caution:

If you use any HDFS storage locations, the HDFS data must be available at the time you start Vertica. Your HDFS cluster must be operational, and the ROS files must be present. If you have moved data files, or if they have become corrupted, or if your HDFS cluster is not responsive, Vertica cannot start.

Creating the Storage Location

To create an HDFS storage location, first create the location on all nodes and then set its storage policy to HDFS. To create the location in HDFS on all nodes:

```
=> CREATE LOCATION 'webhdfs://hadoop:50070/user/dbadmin' ALL NODES SHARED  
    USAGE 'data' LABEL 'coldstorage';
```

Next, set the storage policy for your database objects to use this location:

```
=> SELECT SET_OBJECT_STORAGE_POLICY('SchemaName', 'coldstorage');
```

This causes all data in the named schema to be written to the HDFS storage location (`coldstorage`) instead of the local disk. You can set storage policies for a schema, a table, a partition, or the entire database.

For more information, see [Managing Storage Locations](#).

Adding HDFS Storage Locations to New Nodes

If you add nodes to your Vertica cluster, they do not automatically have access to existing HDFS storage locations. You must manually create the storage location for the new node using the `CREATE LOCATION` statement. Do not use the `ALL NODES` keyword in this statement. Instead, use the `NODE` keyword with the name of the new node to tell Vertica that just that node needs to add the shared location.

Caution: You must manually create the storage location. Otherwise, the new node uses the default storage policy (usually, storage on the local Linux filesystem) to store data that the other nodes store in HDFS. As a result, the node can run out of disk space.

The following example shows how to add the storage location from the preceding example to a new node named `v_vmart_node0004`:

```
=> CREATE LOCATION 'webhdfs://hadoop:50070/user/dbadmin' NODE 'v_vmart_node0004'  
    SHARED USAGE 'data' LABEL 'coldstorage';
```

Any [active standby nodes](#) in your cluster when you create an HDFS-based storage location automatically create their own instances of the location. When the standby node takes over for a down node, it uses its own instance of the location to store data for objects using the HDFS-based storage policy. Treat standby nodes added after you create the storage location as any other new node. You must manually define the HDFS storage location.

Creating a Storage Policy for HDFS Storage Locations

After you create an HDFS storage location, you assign database objects to the location by setting storage policies. Based on these storage policies, database objects such as partition ranges, individual tables, whole schemas, or even the entire database store their data in the HDFS storage location. Use the [SET_OBJECT_STORAGE_POLICY](#) function to assign objects to an HDFS storage location. In the function call, supply the label you assigned to the HDFS storage location as the location label argument. You do so using the `CREATE LOCATION` statement's `LABEL` keyword.

The following example demonstrates using [SET_OBJECT_STORAGE_POLICY](#) to store a table in an HDFS storage location. The example statement sets the policy for an existing table, named `messages`, to store its data in an HDFS storage location, named `coldstorage`.

```
=> SELECT SET_OBJECT_STORAGE_POLICY('messages', 'coldstorage');
```

This table's data is moved to the HDFS storage location with the next merge-out. Alternatively, you can have Vertica move the data immediately by using the `enforce_storage_move` parameter.

You can query the [STORAGE_CONTAINERS](#) system table and examine the `location_label` column to verify that Vertica has moved the data:

```
=> SELECT node_name, projection_name, location_label, total_row_count FROM V_MONITOR.STORAGE_
CONTAINERS
WHERE projection_name ILIKE 'messages%';
 node_name      | projection_name | location_label | total_row_count
-----+-----+-----+-----
v_vmart_node0001 | messages_b0    | coldstorage   | 366057
v_vmart_node0001 | messages_b1    | coldstorage   | 366511
v_vmart_node0002 | messages_b0    | coldstorage   | 367432
v_vmart_node0002 | messages_b1    | coldstorage   | 366057
v_vmart_node0003 | messages_b0    | coldstorage   | 366511
v_vmart_node0003 | messages_b1    | coldstorage   | 367432
(6 rows)
```

See [Creating Storage Policies](#) in the Administrator's Guide for more information about assigning storage policies to objects.

Backing Up HDFS Storage Locations

Micro Focus recommends that you regularly back up the data in your Vertica database. This recommendation includes data stored in your HDFS storage locations. The Vertica backup script (`vbr`) can back up HDFS storage locations. However, you must perform several configuration steps before it can back up these locations.

Caution: After you have created an HDFS storage location, full database backups will fail with the error message:

```
ERROR 5127: Unable to create snapshot No such file /usr/bin/hadoop:
check the HadoopHome configuration parameter
```

This error is caused by the backup script not being able to back up the HDFS storage locations. You must configure Vertica and Hadoop to enable the backup script to back these locations. After you configure Vertica and Hadoop, you can once again perform full database backups.

There are several considerations for backing up HDFS storage locations in your database:

- HDFS storage locations do not support object-level backups. You must perform a full database backup to back up the data in your HDFS storage locations.
- Data in an HDFS storage location is backed up to HDFS. This backup guards against accidental deletion or corruption of data. It does not prevent data loss in the case of a catastrophic failure of the entire Hadoop cluster. To prevent data loss, you must have a backup and disaster recovery plan for your Hadoop cluster.

Data stored on the Linux native filesystem is still backed up to the location you specify in the backup configuration file. It and the data in HDFS storage locations are handled separately by the vbr backup script.

- You must configure your Vertica cluster to restore database backups containing an HDFS storage location. See [Configuring Vertica to Restore HDFS Storage Locations](#) for the configuration steps you must take.
- The HDFS directory for the storage location must have snapshotting enabled. You can either directly configure this yourself or enable the database administrator's Hadoop account to do it for you automatically. See [Configuring Hadoop and Vertica to Enable Backup of HDFS Storage](#) for more information.

The topics in this section explain the configuration steps you must take to enable the backup of HDFS storage locations.

Configuring Hadoop and Vertica to Enable Backup of HDFS Storage

The Vertica backup script uses HDFS's snapshotting feature to create a backup of HDFS storage locations. A directory must allow snapshotting before HDFS can take a snapshot. Only a Hadoop superuser can enable snapshotting on a directory. Vertica can enable snapshotting automatically if the database administrator is also a Hadoop superuser.

If HDFS is unsecured, the following instructions apply to the database administrator account, usually dbadmin. If HDFS uses Kerberos security, the following instructions apply to the principal stored in the Vertica keytab file, usually vertica. The instructions below use the term "database account" to refer to this user.

We recommend that you make the database administrator or principal a Hadoop superuser. If you are not able to do so, you must enable snapshotting on the directory before configuring it for use by Vertica.

The steps you need to take to make the Vertica database administrator account a superuser depend on the distribution of Hadoop you are using. Consult your Hadoop distribution's documentation for details.

Manually Enabling Snapshotting for a Directory

If you cannot grant superuser status to the database account, you can instead enable snapshotting of each directory manually. Use the following command:

```
hdfs dfsadmin -allowSnapshot path
```

Issue this command for each directory on each node. Remember to do this each time you add a new node to your HDFS cluster.

Nested snapshottable directories are not allowed, so you cannot enable snapshotting for a parent directory to automatically enable it for child directories. You must enable it for each individual directory.

Additional Requirements for Kerberos

If HDFS uses Kerberos, then in addition to granting the keytab principal access, you must set a Vertica configuration parameter. In Vertica, set the `HadoopConfDir` parameter to the location of the directory containing the `core-site.xml`, `hdfs-site.xml`, and `yarn-site.xml` configuration files:

```
=> ALTER DATABASE example SET HadoopConfDir = '/etc/hadoop/conf';
```

All three configuration files must be present in this directory.

If your Vertica nodes are not co-located on HDFS nodes, then you must copy these files from an HDFS node to each Vertica node. Use the same path on every database node, because `HadoopConfDir` is a global value.

Testing the Database Account's Ability to Make HDFS Directories Snapshottable

After making the database account a Hadoop superuser, verify that the account can set directories snapshottable:

1. Log into the Hadoop cluster as the database account (dbadmin by default).
2. Determine a location in HDFS where the database administrator can create a directory. The /tmp directory is usually available. Create a test HDFS directory using the command:

```
$ hdfs dfs -mkdir /path/testdir
```

3. Make the test directory snapshottable using the command:

```
$ hdfs dfsadmin -allowSnapshot /path/testdir
```

The following example demonstrates creating an HDFS directory and making it snapshottable:

```
$ hdfs dfs -mkdir /tmp/snaptest  
$ hdfs dfsadmin -allowSnapshot /tmp/snaptest  
Allowing snapshot on /tmp/snaptest succeeded
```

Configuring Vertica to Restore HDFS Storage Locations

Your Vertica cluster must be able to run the Hadoop distcp command to restore a backup of an HDFS storage location. The easiest way to enable your cluster to run this command is to install several Hadoop packages on each node. These packages must be from the same distribution and version of Hadoop that is running on your Hadoop cluster.

The steps you need to take depend on:

- The distribution and version of Hadoop running on the Hadoop cluster containing your HDFS storage location.
- The distribution of Linux running on your Vertica cluster.

Note: Installing the Hadoop packages necessary to run distcp does not turn your Vertica database into a Hadoop cluster. This process installs just enough of the Hadoop support files on your cluster to run the distcp command. There is no additional overhead placed on the Vertica cluster, aside from a small amount of additional disk space consumed by the Hadoop support files.

Configuration Overview

The steps for configuring your Vertica cluster to restore backups for HDFS storage location are:

1. If necessary, install and configure a Java runtime on the hosts in the Vertica cluster.
2. Find the location of your Hadoop distribution's package repository.
3. Add the Hadoop distribution's package repository to the Linux package manager on all hosts in your cluster.
4. Install the necessary Hadoop packages on your Vertica hosts.
5. Set two configuration parameters in your Vertica database related to Java and Hadoop.
6. If your HDFS storage location uses Kerberos, set additional configuration parameters to allow Vertica user credentials to be proxied.
7. Confirm that the Hadoop distcp command runs on your Vertica hosts.

The following sections describe these steps in greater detail.

Installing a Java Runtime

You Vertica cluster must have a Java Virtual Machine (JVM) installed to run the Hadoop distcp command. It already has a JVM installed if you have configured it to:

- Execute User-Defined Extensions developed in Java. See [Developing User-Defined Extensions \(UDxs\)](#) for more information.
- Access Hadoop data using the HCatalog Connector. See [Using the HCatalog Connector](#) for more information.

If your Vertica database has a JVM installed, verify that your Hadoop distribution supports it. See your Hadoop distribution's documentation to determine which JVMs it supports.

If the JVM installed on your Vertica cluster is not supported by your Hadoop distribution you must uninstall it. Then you must install a JVM that is supported by both Vertica and your Hadoop distribution. See [Vertica SDKs](#) in Supported Platforms for a list of the JVMs compatible with Vertica.

If your Vertica cluster does not have a JVM (or its existing JVM is incompatible with your Hadoop distribution), follow the instructions in [Installing the Java Runtime on Your Vertica Cluster](#).

Finding Your Hadoop Distribution's Package Repository

Many Hadoop distributions have their own installation system, such as Cloudera's Manager or Hortonwork's Ambari. However, they also support manual installation using native Linux packages such as RPM and .deb files. These package files are maintained in a repository. You can configure your Vertica hosts to access this repository to download and install Hadoop packages.

Consult your Hadoop distribution's documentation to find the location of its Linux package repository. This information is often located in the portion of the documentation covering manual installation techniques.:

Each Hadoop distribution maintains separate repositories for each of the major Linux package management systems. Find the specific repository for the Linux distribution running on your Vertica cluster. Be sure that the package repository that you select matches the version of Hadoop distribution installed on your Hadoop cluster.

Configuring Vertica Nodes to Access the Hadoop Distribution's Package Repository

Configure the nodes in your Vertica cluster so they can access your Hadoop distribution's package repository. Your Hadoop distribution's documentation should explain how to add the repositories to your Linux platform. If the documentation does not explain how to add the repository to your packaging system, refer to your Linux distribution's documentation.

The steps you need to take depend on the package management system your Linux platform uses. Usually, the process involves:

- Downloading a configuration file.
- Adding the configuration file to the package management system's configuration directory.
- For Debian-based Linux distributions, adding the Hadoop repository encryption key to the root account keyring.
- Updating the package management system's index to have it discover new packages.

The following example demonstrates adding the Hortonworks 2.1 package repository to an Ubuntu 12.04 host. These steps in this example are explained in the Hortonworks documentation.

```
$ wget http://public-repo-1.hortonworks.com/HDP/ubuntu12/2.1.3.0/hdp.list \

Reading package lists... Done
```

You must add the Hadoop repository to all hosts in your Vertica cluster.

Installing the Required Hadoop Packages

After configuring the repository, you are ready to install the Hadoop packages. The packages you need to install are:

- hadoop
- hadoop-hdfs

- `hadoop-client`

The names of the packages are usually the same across all Hadoop and Linux distributions. These packages often have additional dependencies. Always accept any additional packages that the Linux package manager asks to install.

To install these packages, use the package manager command for your Linux distribution. The package manager command you need to use depends on your Linux distribution:

- On Red Hat and CentOS, the package manager command is `yum`.
- On Debian and Ubuntu, the package manager command is `apt-get`.
- On SUSE the package manager command is `zypper`.

Consult your Linux distribution's documentation for instructions on installing packages.

The following example demonstrates installing the required Hadoop packages from the Hortonworks 2.1 distribution on an Ubuntu 12.04 system.

```
# apt-get install hadoop hadoop-hdfs hadoop-client
Reading package lists... Done
Building dependency tree
Reading state information... Done
The following extra packages will be installed:
  bigtop-jsvc hadoop-mapreduce hadoop-yarn zookeeper
The following NEW packages will be installed:

Setting Configuration Parameters

You must set two configuration parameters to enable Vertica to restore HDFS data:

- `JavaBinaryForUDx` is the path to the Java executable. You may have already set this value to use Java UDxs or the HCatalog Connector. You can find the path for the default Java executable from the Bash command shell using the command:

```
which java
```

- `HadoopHome` is the path where Hadoop is installed on the Vertica hosts. This is the directory that contains `bin/hadoop` (the bin directory containing the Hadoop executable file). The default value for this parameter is `/usr`. The default value is correct if your Hadoop executable is located at `/usr/bin/hadoop`.

The following example demonstrates setting and then reviewing the values of these parameters.

```
=> ALTER DATABASE mydb SET JavaBinaryForUDx = '/usr/bin/java';
=> SELECT get_config_parameter('JavaBinaryForUDx');
   get_config_parameter
-----
/usr/bin/java
(1 row)
=> ALTER DATABASE mydb SET HadoopHome = '/usr';
```

```
=> SELECT get_config_parameter('HadoopHome');
       get_config_parameter
-----
      /usr
(1 row)
```

There are additional parameters you may, optionally, set:

- `HadoopFSReadRetryTimeout` and `HadoopFSWriteRetryTimeout` specify how long to wait before failing. The default value for each is 180 seconds. If you are confident that your file system will fail more quickly, you can potentially improve performance by lowering these values.
- `HadoopFSReplication` is the number of replicas HDFS makes. By default the Hadoop client chooses this; Vertica uses the same value for all nodes. We recommend against changing this unless directed to.
- `HadoopFSBlockSizeBytes` is the block size to write to HDFS; larger files are divided into blocks of this size. The default is 64MB.

Setting Kerberos Parameters

If your Vertica nodes are co-located on HDFS nodes and you are using Kerberos, you must change some Hadoop configuration parameters. These changes are needed in order for restoring from backups to work. In `yarn-site.xml` on every Vertica node, set the following parameters:

Parameter	Value
<code>yarn.resourcemanager.proxy-user-privileges.enabled</code>	true
<code>yarn.resourcemanager.proxyusers.*.groups</code>	*
<code>yarn.resourcemanager.proxyusers.*.hosts</code>	*
<code>yarn.resourcemanager.proxyusers.*.users</code>	*
<code>yarn.timeline-service.http-authentication.proxyusers.*.groups</code>	*
<code>yarn.timeline-service.http-authentication.proxyusers.*.hosts</code>	*
<code>yarn.timeline-service.http-authentication.proxyusers.*.users</code>	*

No changes are needed on HDFS nodes that are not also Vertica nodes.

Confirming that distcp Runs

After the packages are installed on all hosts in your cluster, your database should be able to run the Hadoop distcp command. To test it:

1. Log into any host in your cluster as the database administrator.
2. At the Bash shell, enter the command:

```
$ hadoop distcp
```

3. The command should print a message similar to the following:

```
usage: distcp OPTIONS [source_path...] <target_path>
       OPTIONS
  -async                Should distcp execution be blocking
  -atomic               Commit all changes or none
  -bandwidth <arg>     Specify bandwidth per map in MB
  -delete               Delete from target, files missing in source
  -f <arg>              List of files that need to be copied
  -filelimit <arg>     (Deprecated!) Limit number of files copied to <= n
  -i                    Ignore failures during copy
  -log <arg>           Folder on DFS where distcp execution logs are
                       saved
  -m <arg>              Max number of concurrent maps to use for copy
  -mapredSslConf <arg> Configuration for ssl config file, to use with
                       https://
  -overwrite            Choose to overwrite target files unconditionally,
                       even if they exist.
  -p <arg>              preserve status (rbugpc)(replication, block-size,
                       user, group, permission, checksum-type)
  -sizelimit <arg>     (Deprecated!) Limit number of files copied to <= n
                       bytes
  -skipcrccheck         Whether to skip CRC checks between source and
                       target paths.
  -strategy <arg>      Copy strategy to use. Default is dividing work
                       based on file sizes
  -tmp <arg>            Intermediate work path to be used for atomic
                       commit
  -update               Update target, copying only missingfiles or
                       directories
```

4. Repeat these steps on the other hosts in your database to verify that all of the hosts can run distcp.

Troubleshooting

If you cannot run the distcp command, try the following steps:

- If Bash cannot find the `hadoop` command, you may need to manually add Hadoop's `bin` directory to the system search path. An alternative is to create a symbolic link in an existing directory in the search path (such as `/usr/bin`) to the `hadoop` binary.
- Ensure the version of Java installed on your Vertica cluster is compatible with your Hadoop distribution.
- Review the Linux package installation tool's logs for errors. In some cases, packages may not be fully installed, or may not have been downloaded due to network issues.
- Ensure that the database administrator account has permission to execute the `hadoop` command. You may need to add the account to a specific group in order to allow it to run the necessary commands.

Performing Backups Containing HDFS Storage Locations

After you configure Hadoop and Vertica, HDFS storage locations are automatically backed up when you perform a full database backup. If you already have a backup configuration file for a full database backup, you do not need to make any changes to it. You just run the `vbr` backup script as usual to perform the full database backup. See [Creating Full Backups](#) in the Administrator's Guide for instructions on running the `vbr` backup script.

If you do not have a backup configuration file for a full database backup, you must create one to back up the data in your HDFS storage locations. See [Creating vbr Configuration Files](#) in the Administrator's Guide for more information.

Removing HDFS Storage Locations

The steps to remove an HDFS storage location are similar to standard storage locations:

1. Remove any existing data from the HDFS storage location by using [SET_OBJECT_STORAGE_POLICY](#) to change each object's storage location. Alternatively, you can use [CLEAR_OBJECT_STORAGE_POLICY](#). Because the Tuple Mover runs infrequently, set the `enforce_storage_move` parameter to `true` to make the change immediately.
2. Retire the location on each host that has the storage location defined by using [RETIRE_LOCATION](#). Set `enforce_storage_move` to `true`.

3. Drop the location on each host that has the storage location defined by using [DROP_LOCATION](#).
4. Optionally remove the snapshots and files from the HDFS directory for the storage location.

For more information about changing storage policies, changing usage, retiring locations, and dropping locations, see [Managing Storage Locations](#) in the Administrator's Guide.

Important: If you have backed up the data in the HDFS storage location you are removing, you must perform a full database backup after you remove the location. If you do not and restore the database to a backup made before you removed the location, the location's data is restored.

Removing Storage Location Files from HDFS

Dropping an HDFS storage location does not automatically clean the HDFS directory that stored the location's files. Any snapshots of the data files created when backing up the location are also not deleted. These files consume disk space on HDFS and also prevent the directory from being reused as an HDFS storage location. Vertica refuses to create a storage location in a directory that contains existing files or subdirectories. You must log into the Hadoop cluster to delete the files from HDFS. An alternative is to use some other HDFS file management tool.

Removing Backup Snapshots

HDFS returns an error if you attempt to remove a directory that has snapshots:

```
$ hdfs dfs -rm -r -f -skipTrash /user/dbadmin/v_vmart_node0001
rm: The directory /user/dbadmin/v_vmart_node0001 cannot be deleted since
/user/dbadmin/v_vmart_node0001 is snapshottable and already has snapshots
```

The Vertica backup script creates snapshots of HDFS storage locations as part of the backup process. See [Backing Up HDFS Storage Locations](#) for more information. If you made backups of your HDFS storage location, you must delete the snapshots before removing the directories.

HDFS stores snapshots in a subdirectory named `.snapshot`. You list the snapshots in the directory using the standard HDFS `ls` command. The following example demonstrates listing the snapshots defined for node0001.

```
$ hdfs dfs -ls /user/dbadmin/v_vmart_node0001/.snapshot
Found 1 items
```

```
drwxrwx--- - dbadmin supergroup          0 2014-09-02 10:13 /user/dbadmin/v_vmart_
node0001/.snapshot/s20140902-101358.629
```

To remove snapshots, use the command:

```
hdfs dfs -removeSnapshot directory snapshotname
```

The following example demonstrates the command to delete the snapshot shown in the previous example:

```
$ hdfs dfs -deleteSnapshot /user/dbadmin/v_vmart_node0001 s20140902-101358.629
```

You must delete each snapshot from the directory for each host in the cluster. After you have deleted the snapshots, you can delete the directories in the storage location.

Important: Each snapshot's name is based on a timestamp down to the millisecond. Nodes independently create their own snapshot. They do not synchronize snapshot creation, so their snapshot names differ. You must list each node's snapshot directory to learn the names of the snapshots it contains.

See Apache's [HDFS Snapshot documentation](#) for more information about managing and removing snapshots.

Removing the Storage Location Directories

You can remove the directories that held the storage location's data by either of the following methods:

- Use an HDFS file manager to delete directories. See your Hadoop distribution's documentation to determine if it provides a file manager.
- Log into the Hadoop NameNode using the database administrator's account and use HDFS's `rmr` command to delete the directories. See Apache's [File System Shell Guide](#) for more information.

The following example uses the HDFS `rmr` command from the Linux command line to delete the directories left behind in the HDFS storage location directory `/user/dbadmin`. It uses the `-skipTrash` flag to force the immediate deletion of the files.

```
$ hdfs dfs -ls /user/dbadmin
Found 3 items
drwxrwx--- - dbadmin supergroup          0 2014-08-29 15:11 /user/dbadmin/v_vmart_node0001
drwxrwx--- - dbadmin supergroup          0 2014-08-29 15:11 /user/dbadmin/v_vmart_node0002
drwxrwx--- - dbadmin supergroup          0 2014-08-29 15:11 /user/dbadmin/v_vmart_node0003

$ hdfs dfs -rmr -skipTrash /user/dbadmin/*
```

```
Deleted /user/dbadmin/v_vmart_node0001  
Deleted /user/dbadmin/v_vmart_node0002  
Deleted /user/dbadmin/v_vmart_node0003
```

Troubleshooting HDFS Storage Locations

This topic explains some common issues with HDFS storage locations.

HDFS Storage Disk Consumption

By default, HDFS makes three copies of each file it stores. This replication helps prevent data loss due to disk or system failure. It also helps increase performance by allowing several nodes to handle a request for a file.

A Vertica database with a K-Safety value of 1 or greater also stores its data redundantly using buddy projections.

When a K-Safe Vertica database stores data in an HDFS storage location, its data redundancy is compounded by HDFS's redundancy. HDFS stores three copies of the primary projection's data, plus three copies of the buddy projection for a total of six copies of the data.

If you want to reduce the amount of disk storage used by HDFS locations, you can alter the number of copies of data that HDFS stores. The Vertica configuration parameter named `HadoopFSReplication` controls the number of copies of data HDFS stores.

You can determine the current HDFS disk usage by logging into the Hadoop NameNode and issuing the command:

```
hdfs dfsadmin -report
```

This command prints the usage for the entire HDFS storage, followed by details for each node in the Hadoop cluster. The following example shows the beginning of the output from this command, with the total disk space highlighted:

```
$ hdfs dfsadmin -report  
Configured Capacity: 51495516981 (47.96 GB)  
Present Capacity: 32087212032 (29.88 GB)  
DFS Remaining: 31565144064 (29.40 GB)  
DFS Used: 522067968 (497.88 MB)  
DFS Used%: 1.63%  
Under replicated blocks: 0  
Blocks with corrupt replicas: 0  
Missing blocks: 0  
...
```

After loading a simple million-row table into a table stored in an HDFS storage location, the report shows greater disk usage:

```
Configured Capacity: 51495516981 (47.96 GB)
Present Capacity: 32085299338 (29.88 GB)
DFS Remaining: 31373565952 (29.22 GB)
DFS Used: 711733386 (678.76 MB)
DFS Used%: 2.22%
Under replicated blocks: 0
Blocks with corrupt replicas: 0
Missing blocks: 0
. . .
```

The following Vertica example demonstrates:

1. Dropping the table in Vertica.
2. Setting the HadoopFSReplication configuration option to 1. This tells HDFS to store a single copy of an HDFS storage location's data.
3. Recreating the table and reloading its data.

```
=> DROP TABLE messages;
DROP TABLE

=> ALTER DATABASE mydb SET HadoopFSReplication = 1;

=> CREATE TABLE messages (id INTEGER, text VARCHAR);
CREATE TABLE

=> SELECT SET_OBJECT_STORAGE_POLICY('messages', 'hdfs');
SET_OBJECT_STORAGE_POLICY
-----
Object storage policy set.
(1 row)

=> COPY messages FROM '/home/dbadmin/messages.txt' DIRECT;
Rows Loaded
-----
1000000
```

Running the HDFS report on Hadoop now shows less disk space use:

```
$ hdfs dfsadmin -report
Configured Capacity: 51495516981 (47.96 GB)
Present Capacity: 32086278190 (29.88 GB)
DFS Remaining: 31500988416 (29.34 GB)
DFS Used: 585289774 (558.18 MB)
DFS Used%: 1.82%
Under replicated blocks: 0
Blocks with corrupt replicas: 0
Missing blocks: 0
. . .
```

Caution: Reducing the number of copies of data stored by HDFS increases the risk of data loss. It can also negatively impact the performance of HDFS by reducing the number of nodes that can provide access to a file. This slower performance can impact the performance of Vertica queries that involve data stored in an HDFS storage location.

Kerberos Authentication When Creating a Storage Location

If HDFS uses Kerberos authentication, then the CREATE LOCATION statement authenticates using the Vertica keytab principal, not the principal of the user performing the action. If the creation fails with an authentication error, verify that you have followed the steps described in [Configuring Kerberos](#) to configure this principal.

When creating an HDFS storage location on a Hadoop cluster using Kerberos, CREATE LOCATION reports the principal being used as in the following example:

```
=> CREATE LOCATION 'webhdfs://hadoop.example.com:50070/user/dbadmin' ALL NODES SHARED
      USAGE 'data' LABEL 'coldstorage';
NOTICE 0: Performing HDFS operations using kerberos principal [vertica/hadoop.example.com]
CREATE LOCATION
```

Backup or Restore Fails When Using Kerberos

When backing up an HDFS storage location that uses Kerberos, you might see an error such as:

```
createSnapshot: Failed on local exception: java.io.IOException:
java.lang.IllegalArgumentException: Server has invalid Kerberos principal:
hdfs/test.example.com@EXAMPLE.COM;
```

When restoring an HDFS storage location that uses Kerberos, you might see an error such as:

```
Error msg: Initialization thread logged exception:
Distcp failure!
```

Either of these failures means that Vertica could not find the required configuration files in the HadoopConfDir directory. Usually this is because you have set the parameter but not copied the files from an HDFS node to your Vertica node. See "Additional Requirements for Kerberos" in [Configuring Hadoop and Vertica to Enable Backup of HDFS Storage](#) .

Using the HDFS Connector

Deprecated: The HDFS Connector has been deprecated and will be removed in a future release. Use the `hdfs` URL scheme instead. See [Reading Directly from HDFS](#).

The Hadoop Distributed File System (HDFS) is the location where Hadoop usually stores its input and output files. It stores files across the Hadoop cluster redundantly, to keep the files available even if some nodes are down. HDFS also makes Hadoop more efficient, by spreading file access tasks across the cluster to help limit I/O bottlenecks.

The HDFS Connector lets you load files from HDFS into Vertica using the `COPY` statement. You can also create external tables that access data stored on HDFS as if it were a native Vertica table. The connector is useful if your Hadoop job does not directly store its data in Vertica or if you want to use User-Defined Extensions (UDxs) to load data stored in HDFS.

Note: The files you load from HDFS using the HDFS Connector usually have a delimited format. Column values are separated by a character, such as a comma or a pipe character (`|`). This format is the same type used in other files you load with the `COPY` statement. Hadoop MapReduce jobs often output tab-delimited files.

The HDFS Connector takes advantage of the distributed nature of both Vertica and Hadoop. Individual nodes in the Vertica cluster connect directly to nodes in the Hadoop cluster when you load multiple files from HDFS.

Hadoop splits large files into file segments that it stores on different nodes. The connector directly retrieves these file segments from the node storing them, rather than relying on the Hadoop cluster to reassemble the file.

The connector is read-only; it cannot write data to HDFS.

The HDFS Connector can connect to a Hadoop cluster through unauthenticated and Kerberos-authenticated connections.

HDFS Connector Requirements

Uninstall Prior Versions of the HDFS Connector

The HDFS Connector is now installed with Vertica; you no longer need to download and install it separately. If you have previously downloaded and installed this connector, uninstall it

before you upgrade to this release of Vertica to get the newest version.

WebHDFS Requirements

The HDFS Connector connects to the Hadoop file system using WebHDFS, a built-in component of HDFS that provides access to HDFS files to applications outside of Hadoop. This component must be enabled on your Hadoop cluster. See your Hadoop distribution's documentation for instructions on configuring and enabling WebHDFS.

Note: HTTPfs (also known as HOOP) is another method of accessing files stored in HDFS. It relies on a separate server process that receives requests for files and retrieves them from HDFS. Since it uses a REST API that is compatible with WebHDFS, it could theoretically work with the connector. However, the connector has not been tested with HTTPfs and Micro Focus does not support using the HDFS Connector with HTTPfs. In addition, since all of the files retrieved from HDFS must pass through the HTTPfs server, it is less efficient than WebHDFS, which lets Vertica nodes directly connect to the Hadoop nodes storing the file blocks.

Kerberos Authentication Requirements

The HDFS Connector can connect to HDFS using Kerberos authentication. To use Kerberos, you must meet these additional requirements:

- Your Vertica installation must be Kerberos-enabled.
- Your Hadoop cluster must be configured to use Kerberos authentication.
- Your connector must be able to connect to the Kerberos-enabled Hadoop cluster.
- The Kerberos server must be running version 5.
- The Kerberos server must be accessible from every node in your Vertica cluster.
- You must have Kerberos principals (users) that map to Hadoop users. You use these principals to authenticate your Vertica users with the Hadoop cluster.

Testing Your Hadoop WebHDFS Configuration

To ensure that your Hadoop installation's WebHDFS system is configured and running, follow these steps:

1. Log into your Hadoop cluster and locate a small text file on the Hadoop filesystem. If you do not have a suitable file, you can create a file named `test.txt` in the `/tmp` directory using the following command:

```
echo -e "A|1|2|3\nB|4|5|6" | hadoop fs -put - /tmp/test.txt
```

2. Log into a host in your Vertica database using the database administrator account.
3. If you are using Kerberos authentication, authenticate with the Kerberos server using the keytab file for a user who is authorized to access the file. For example, to authenticate as an user named `exampleuser@MYCOMPANY.COM`, use the command:

```
$ kinit exampleuser@MYCOMPANY.COM -k -t /path/exampleuser.keytab
```

Where *path* is the path to the keytab file you copied over to the node. You do not receive any message if you authenticate successfully. You can verify that you are authenticated by using the `klist` command:

```
$ klistTicket cache: FILE:/tmp/krb5cc_500
Default principal: exampleuser@MYCOMPANY.COM
Valid starting Expires Service principal
07/24/13 14:30:19 07/25/13 14:30:19 krbtgt/MYCOMPANY.COM@MYCOMPANY.COM
renew until 07/24/13 14:30:19
```

4. Test retrieving the file:
 - If you are not using Kerberos authentication, run the following command from the Linux command line:

```
curl -i -L
"http://hadoopNameNode:50070/webhdfs/v1/tmp/test.txt?op=OPEN&user.name=hadoopUserName"
```

Replacing *hadoopNameNode* with the hostname or IP address of the name node in your Hadoop cluster, */tmp/test.txt* with the path to the file in the Hadoop filesystem you located in step 1, and *hadoopUserName* with the user name of a Hadoop user that has read access to the file.

If successful, the command produces output similar to the following:

```
HTTP/1.1 200 OKServer: Apache-Coyote/1.1
Set-Cookie:
hadoop.auth="u=hadoopUser&p=password&t=simple&e=1344383263490&s=n8YB/CHFg56qNmRQRTq00IdRMvE
="; Version=1; Path=/
Content-Type: application/octet-stream
Content-Length: 16
Date: Tue, 07 Aug 2012 13:47:44 GMT
A|1|2|3
B|4|5|6
```

- If you are using Kerberos authentication, run the following command from the Linux command line:

```
curl --negotiate -i -L -u:anyUser http://hadoopNameNode:50070/webhdfs/v1/tmp/test.txt?op=OPEN
```

Replace *hadoopNameNode* with the hostname or IP address of the name node in your Hadoop cluster, and */tmp/test.txt* with the path to the file in the Hadoop filesystem you located in step 1.

If successful, the command produces output similar to the following:

```
HTTP/1.1 401 UnauthorizedContent-Type: text/html; charset=utf-8
WWW-Authenticate: Negotiate
Content-Length: 0
Server: Jetty(6.1.26)
HTTP/1.1 307 TEMPORARY_REDIRECT
Content-Type: application/octet-stream
Expires: Thu, 01-Jan-1970 00:00:00 GMT
Set-Cookie: hadoop.auth="u=exampleuser&p=exampleuser@MYCOMPANY.COM&t=kerberos&
e=1375144834763&s=iY52iRvjuuoZ5iYG8G5g1202Vwo=";Path=/
Location:
http://hadoopnamenode.mycompany.com:1006/webhdfs/v1/user/release/docexample/test.txt?
op=OPEN&delegation=JAAHcmVsZWFzZQdyZWx1YXN1AioBQCrfpdGKAUB07CnRju3TbBS1ID_osB658jfGf
RpEt8-u9WHymRJXRUIJIREZTIGR1bGVnYXRpb24SMTAuMjAuMTAwLjlkxOjUwMDcw&offset=0
Content-Length: 0
Server: Jetty(6.1.26)
HTTP/1.1 200 OK
Content-Type: application/octet-stream
Content-Length: 16
Server: Jetty(6.1.26)
A|1|2|3
B|4|5|6
```

If the curl command fails, you must review the error messages and resolve any issues before using the Vertica Connector for HDFS with your Hadoop cluster. Some debugging steps include:

- Verify the HDFS service's port number.
- Verify that the Hadoop user you specified exists and has read access to the file you are attempting to retrieve.

Loading Data Using the HDFS Connector

You can use the HDFS User Defined Source (UDS) in a [COPY](#) statement to load data from HDFS files.

The syntax for using the HDFS UDS in a COPY statement is:

```
COPY tableName SOURCE Hdfs(url='WebHDFSFileURL', [username='username'],  
[low_speed_limit=speed]);
```

<i>tableName</i>	The name of the table to receive the copied data.
<i>WebHDFSFileURL</i>	<p>A string containing one or more URLs that identify the file or files to be read. See below for details. Use commas to separate multiple URLs .</p> <p>If a URL contains certain special characters, you must escape them:</p> <ul style="list-style-type: none">• Replace any commas in the URLs with the escape sequence %2c. For example, if you are loading a file named <code>doe, john.txt</code>, change the file's name in the URL to <code>doe%2cjohn.txt</code>.• Replace any single quotes with the escape sequence ' '. For example, if you are loading a file named <code>john's_notes.txt</code>, change the file's name in the URL to <code>john' 's_notes.txt</code>.
<i>username</i>	The username of a Hadoop user that has permissions to access the files you want to copy. If you are using Kerberos, omit this argument.
<i>speed</i>	The minimum data transmission rate, expressed in bytes per second, that the connector allows. The connector breaks any connection between the Hadoop and Vertica clusters that transmits data slower than this rate for more than 1 minute. After the connector breaks a connection for being too slow, it attempts to connect to another node in the Hadoop cluster. This new connection can supply the data that the broken connection was retrieving. The connector terminates the COPY statement and returns an error message if:

	<ul style="list-style-type: none"> • It cannot find another Hadoop node to supply the data. • The previous transfer attempts from all other Hadoop nodes that have the file also closed because they were too slow. <p>Default Value: 1048576 (1MB per second transmission rate)</p>
--	---

The HDFS File URL

The *url* parameter in the Hdfs function call is a string containing one or more comma-separated HTTP URLs. These URLs identify the files in HDFS that you want to load. The format for each URL in this string is:

```
http://NameNode:port/webhdfs/v1/HDFSFilePath
```

<i>NameNode</i>	The host name or IP address of the Hadoop cluster's name node.
<i>Port</i>	The port number on which the WebHDFS service is running. This number is usually 50070 or 14000, but may be different in your Hadoop installation.
<i>webhdfs/v1/</i>	The protocol being used to retrieve the file. This portion of the URL is always the same. It tells Hadoop to use version 1 of the WebHDFS API.
<i>HDFSFilePath</i>	The path from the root of the HDFS filesystem to the file or files you want to load. This path can contain standard Linux wildcards. <div style="border: 1px solid gray; padding: 5px; margin-top: 10px;"> <p>Important: Any wildcards you use to specify multiple input files must resolve to files only. They must not include any directories. For example, if you specify the path <code>/user/HadoopUser/output/*</code>, and the output directory contains a subdirectory, the connector returns an error message.</p> </div>

The following example shows how to use the Vertica Connector for HDFS to load a single file named `/tmp/test.txt`. The Hadoop cluster's name node is named `hadoop`.

```
=> COPY testTable SOURCE Hdfs(url='http://hadoop:50070/webhdfs/v1/tmp/test.txt',
  username='hadoopUser');
  Rows Loaded
  -----
                2
(1 row)
```

Copying Files in Parallel

The basic COPY statement in the previous example copies a single file. It runs on just a single host in the Vertica cluster because the Connector cannot break up the workload among nodes. Any data load that does not take advantage of all nodes in the Vertica cluster is inefficient.

To make loading data from HDFS more efficient, spread the data across multiple files on HDFS. This approach is often natural for data you want to load from HDFS. Hadoop MapReduce jobs usually store their output in multiple files.

You specify multiple files to be loaded in your Hdfs function call by:

- Using wildcards in the URL
- Supplying multiple comma-separated URLs in the url parameter of the Hdfs user-defined source function call
- Supplying multiple comma-separated URLs that contain wildcards

Loading multiple files through the Vertica Connector for HDFS results in a efficient load. The Vertica hosts connect directly to individual nodes in the Hadoop cluster to retrieve files. If Hadoop has broken files into multiple chunks, the Vertica hosts directly connect to the nodes storing each chunk.

The following example shows how to load all of the files whose filenames start with "part-" located in the /user/hadoopUser/output directory on the HDFS. If there are at least as many files in this directory as there are nodes in the Vertica cluster, all nodes in the cluster load data from the HDFS.

```
=> COPY Customers SOURCE-> Hdfs(url='http://hadoop:50070/webhdfs/v1/user/hadoopUser/output/part-*',
  username='hadoopUser');
  Rows Loaded
  -----
          40008
(1 row)
```

To load data from multiple directories on HDFS at once use multiple comma-separated URLs in the URL string:

```
=> COPY Customers SOURCE-> Hdfs(url='http://hadoop:50070/webhdfs/v1/user/HadoopUser/output/part-*,
  http://hadoop:50070/webhdfs/v1/user/AnotherUser/part-*',
  username='H=hadoopUser');
  Rows Loaded
  -----
          80016
(1 row)
```

Note: Vertica statements must be less than 65,000 characters long. If you supply too many long URLs in a single statement, you could go over this limit. Normally, you would only approach this limit if you are automatically generating of the COPY statement using a program or script.

Viewing Rejected Rows and Exceptions

COPY statements that use the Vertica Connector for HDFS use the same method for recording rejections and exceptions as other COPY statements. Rejected rows and exceptions are saved to log files. These log files are stored by default in the CopyErrorLogs subdirectory in the database's catalog directory. Due to the distributed nature of the Vertica Connector for HDFS, you cannot use the ON option to force all exception and rejected row information to be written to log files on a single Vertica host. Instead, you need to collect the log files from across the hosts to review all of the exceptions and rejections generated by the COPY statement.

For more about handling rejected rows, see [Capturing Load Rejections and Exceptions](#).

Creating an External Table with an HDFS Source

You can use the HDFS Connector as a source for an external table that lets you directly perform queries on the contents of files on the Hadoop Distributed File System (HDFS). See [Using External Tables](#) in the Administrator's Guide for more information on external tables. If your HDFS data is in ORC or Parquet format, using the special readers for those formats might provide better performance. See [Reading Hadoop Columnar File Formats](#).

Using an external table to access data stored on an HDFS cluster is useful when you need to extract data from files that are periodically updated, or have additional files added on HDFS. It saves you from having to drop previously loaded data and then reload the data using a COPY statement. The external table always accesses the current version of the files on HDFS.

Note: An external table performs a bulk load each time it is queried. Its performance is significantly slower than querying an internal Vertica table. You should only use external tables for infrequently-run queries (such as daily reports). If you need to frequently query the content of the HDFS files, you should either use COPY to load the entire content of the files into Vertica or save the results of a query run on an external table to an internal table which you then use for repeated queries.

To create an external table that reads data from HDFS, use the HDFS Use-Defined Source (UDS) in a [CREATE EXTERNAL TABLE AS COPY](#) statement. The COPY portion of this statement has the same format as the COPY statement used to load data from HDFS. See [Loading Data Using the HDFS Connector](#) for more information.

The following simple example shows how to create an external table that extracts data from every file in the `/user/hadoopUser/example/output` directory using the HDFS Connector.

```
=> CREATE EXTERNAL TABLE hadoopExample (A VARCHAR(10), B INTEGER, C INTEGER, D INTEGER)
-> AS COPY SOURCE Hdfs(url=
-> 'http://hadoop01:50070/webhdfs/v1/user/hadoopUser/example/output/*',
-> username='hadoopUser');
CREATE TABLE
=> SELECT * FROM hadoopExample;
  A  | B | C | D
-----+-----+-----+-----
test1 | 1 | 2 | 3
test1 | 3 | 4 | 5
(2 rows)
```

Later, after another Hadoop job adds contents to the output directory, querying the table produces different results:

```
=> SELECT * FROM hadoopExample;
  A  | B | C | D
-----+-----+-----+-----
test3 | 10 | 11 | 12
test3 | 13 | 14 | 15
test2 | 6 | 7 | 8
test2 | 9 | 0 | 10
test1 | 1 | 2 | 3
test1 | 3 | 4 | 5
(6 rows)
```

Load Errors in External Tables

Normally, querying an external table on HDFS does not produce any errors if rows rejected by the underlying COPY statement (for example, rows containing columns whose contents are incompatible with the data types in the table). Rejected rows are handled the same way they are in a standard COPY statement: they are written to a rejected data file, and are noted in the exceptions file. For more information on how COPY handles rejected rows and exceptions, see [Capturing Load Rejections and Exceptions](#) in the Administrator's Guide.

Rejections and exception files are created on all of the nodes that load data from the HDFS. You cannot specify a single node to receive all of the rejected row and exception information. These files are created on each Vertica node as they process files loaded through the Vertica Connector for HDFS.

Note: Since the the connector is read-only, there is no way to store rejection and exception information on the HDFS.

Fatal errors during the transfer of data (for example, specifying files that do not exist on the HDFS) do not occur until you query the external table. The following example shows what happens if you recreate the table based on a file that does not exist on HDFS.

```
=> DROP TABLE hadoopExample;
DROP TABLE
=> CREATE EXTERNAL TABLE hadoopExample (A INTEGER, B INTEGER, C INTEGER, D INTEGER)
-> AS COPY SOURCE HDFS(url='http://hadoop01:50070/webhdfs/v1/tmp/nofile.txt',
-> username='hadoopUser');
CREATE TABLE
=> SELECT * FROM hadoopExample;
ERROR 0: Error calling plan() in User Function HdfsFactory at
[src/Hdfs.cpp:222], error code: 0, message: No files match
[http://hadoop01:50070/webhdfs/v1/tmp/nofile.txt]
```

Note that it is not until you actually query the table that the connector attempts to read the file. Only then does it return an error.

HDFS Connector Troubleshooting Tips

The following sections explain some of the common issues you may encounter when using the HDFS Connector.

User Unable to Connect to Kerberos-Authenticated Hadoop Cluster

A user may suddenly be unable to connect to Hadoop through the connector in a Kerberos-enabled environment. This issue can be caused by someone exporting a new keytab file for the user, which invalidates existing keytab files. You can determine if invalid keytab files is the problem by comparing the key version number associated with the user's principal key in Kerberos with the key version number stored in the keytab file on the Vertica cluster.

To find the key version number for a user in Kerberos:

1. From the Linux command line, start the kadmin utility (kadmin.local if you are logged into the Kerberos Key Distribution Center). Run the getprinc command for the user:

```
$ sudo kadmin
[sudo] password for dbadmin:
Authenticating as principal root/admin@MYCOMPANY.COM with password.
Password for root/admin@MYCOMPANY.COM:
kadmin: getprinc exampleuser@MYCOMPANY.COM
Principal: exampleuser@MYCOMPANY.COM
Expiration date: [never]
Last password change: Fri Jul 26 09:40:44 EDT 2013
Password expiration date: [none]
Maximum ticket life: 1 day 00:00:00
Maximum renewable life: 0 days 00:00:00
Last modified: Fri Jul 26 09:40:44 EDT 2013 (root/admin@MYCOMPANY.COM)
Last successful authentication: [never]
Last failed authentication: [never]
Failed password attempts: 0
Number of keys: 2
Key: vno 3, des3-cbc-sha1, no salt
Key: vno 3, des-cbc-crc, no salt
MKey: vno 0
Attributes:
Policy: [none]
```

In the preceding example, there are two keys stored for the user, both of which are at version number (vno) 3.

2. To get the version numbers of the keys stored in the keytab file, use the klist command:

```
$ sudo klist -ek exampleuser.keytab
Keytab name: FILE:exampleuser.keytab
KVNO Principal
-----
 2 exampleuser@MYCOMPANY.COM (des3-cbc-sha1)
 2 exampleuser@MYCOMPANY.COM (des-cbc-crc)
 3 exampleuser@MYCOMPANY.COM (des3-cbc-sha1)
 3 exampleuser@MYCOMPANY.COM (des-cbc-crc)
```

The first column in the output lists the key version number. In the preceding example, the keytab includes both key versions 2 and 3, so the keytab file can be used to authenticate the user with Kerberos.

Resolving Error 5118

When using the connector, you might receive an error message similar to the following:

```
ERROR 5118: UDL specified no execution nodes; at least one execution node must be specified
```

To correct this error, verify that all of the nodes in your Vertica cluster have the correct version of the HDFS Connector package installed. This error can occur if one or more of the nodes do not have the supporting libraries installed. These libraries may be missing because one of the

nodes was skipped when initially installing the connector package. Another possibility is that one or more nodes have been added since the connector was installed.

Transfer Rate Errors

The HDFS Connector monitors how quickly Hadoop sends data to Vertica. In some cases, the data transfer speed on any connection between a node in your Hadoop cluster and a node in your Vertica cluster slows beyond a lower limit (by default, 1 MB per second). When the transfer slows beyond the lower limit, the connector breaks the data transfer. It then connects to another node in the Hadoop cluster that contains the data it was retrieving. If it cannot find another node in the Hadoop cluster to supply the data (or has already tried all of the nodes in the Hadoop cluster), the connector terminates the COPY statement and returns an error.

```
=> COPY messages SOURCE Hdfs(url='http://hadoop.example.com:50070/webhdfs/v1/tmp/data.txt',
    username='exampleuser');
ERROR 3399: Failure in UDx RPC call InvokeProcessUDL(): Error calling processUDL()
in User Defined Object [Hdfs] at [src/Hdfs.cpp:275], error code: 0,
message: [Transferring rate during last 60 seconds is 172655 byte/s, below threshold 1048576 byte/s,
give up.
The last error message: Operation too slow. Less than 1048576 bytes/sec transferred the last 1
seconds.
The URL:
http://hadoop.example.com:50070/webhdfs/v1/tmp/data.txt?op=OPEN&offset=154901544&length=113533912.
The redirected URL: http://hadoop.example.com:50075/webhdfs/v1/tmp/data.txt?op=OPEN&
namenoderpcaddress=hadoop.example.com:8020&length=113533912&offset=154901544.]
```

If you encounter this error, troubleshoot the connection between your Vertica and Hadoop clusters. If there are no problems with the network, determine if either your Hadoop cluster or Vertica cluster is overloaded. If the nodes in either cluster are too busy, they may not be able to maintain the minimum data transfer rate.

If you cannot resolve the issue causing the slow transfer rate, you can lower the minimum acceptable speed. To do so, set the `low_speed_limit` parameter for the Hdfs source. The following example shows how to set `low_speed_limit` to 524288 to accept transfer rates as low as 512 KB per second (half the default lower limit).

```
=> COPY messages SOURCE Hdfs(url='http://hadoop.example.com:50070/webhdfs/v1/tmp/data.txt',
    username='exampleuser', low_speed_limit=524288);
Rows Loaded
-----
      9891287
(1 row)
```

When you lower the `low_speed_limit` parameter, the COPY statement loading data from HDFS may take a long time to complete.

You can also increase the `low_speed_limit` setting if the network between your Hadoop cluster and Vertica cluster is fast. You can choose to increase the lower limit to force COPY statements

to generate an error, if they are running more slowly than they normally should, given the speed of the network.

Error Loading Many Files

When using the HDFS Connector to load many data files in a single statement, you might receive an error message similar to the following:

```
RROR 3399: Failure in UDX RPC call InvokePlanUDL():  
Error calling planUDL() in User Defined Object [Hdfs] at [src/Glob.cpp:531],  
error code: 0, message:  
Error occurs in Glob::stat:  
Last error message before give up: Failed to connect to 10.20.41.212:  
Cannot assign requested address.
```

This can happen when concurrent load requests overwhelm the Name Node. It is generally safe to load hundreds of files at a time, but if you load thousands you might see this error. Use smaller batches of files to avoid this error.

Integrating With Cloudera Manager

The Cloudera distribution of Hadoop includes Cloudera Manager, a web-based tool for managing a Hadoop cluster. Cloudera Manager can manage any service for which a service description is available, including Vertica.

You can use Cloudera Manager to start, stop, and monitor individual database nodes or the entire database. You can manage both co-located and separate Vertica clusters—Cloudera can manage services on nodes that are not part of the Hadoop cluster.

You must install and configure your Vertica database before proceeding; you cannot use Cloudera Manager to create the database.

Installing the Service

Note: Because the service has to send the database password over the network, you should enable encryption on your Hadoop cluster before proceeding.

A Cloudera Service Description (CSD) file describes a service that Cloudera can manage. The Vertica CSD is in `/opt/vertica/share/CSD` on a database node.

To install the Vertica CSD, follow these steps:

1. On a Vertica node, follow the instructions in [VerticaAPIKey](#) to generate an API key. You need this key to finish the installation of the CSD.
2. On the Hadoop node that hosts Cloudera Manager, copy the CSD file into `/opt/cloudera/csd`.
3. Restart Cloudera Manager:

```
$ service cloudera-scm-server restart
```

4. In a web browser, go to Cloudera Manager and restart the Cloudera Management Service.
5. If your Vertica cluster is separate from your Hadoop cluster (not co-located on it): Use Cloudera Manager to add the hosts for your database nodes. If your cluster is co-located, skip this step.
6. Use Cloudera Manager to add the Vertica service.

7. On the "Role Assignment" page, select the hosts that are database nodes.
8. On the "Configuration" page, specify values for the following fields:
 - database name
 - agent port (accept the default if you're not sure)
 - API key
 - database user to run as (usually dbadmin) and password

About the Agent

When you manage Vertica through Cloudera Manager, you are actually interacting with the Vertica Agent, not the database directly. The [Agent](#) runs on all database nodes and interacts with the database on your behalf. Management Console uses the same agent. Most of the time this extra indirection is transparent to you.

A Cloudera-managed service contains one or more roles. In this case the service is "Vertica" and the single role is "Vertica Node".

Available Operations

Cloudera Manager shows two groups of operations. Service-level operations apply to the service on all nodes, while role-level operations apply only to a single node.

You can perform the following service-level operations on all nodes:

- Start: Starts the agent and, if it is not already running, the database.
- Stop: Stops the database and agent.
- Restart: Calls Stop and then Start.
- Add Role Instances: Adds new database nodes to Cloudera Manager. The nodes must already be part of the Vertica cluster, and the hosts must already be known to Cloudera Manager.
- Enter Maintenance Mode: Suppresses health alerts generated by Cloudera Manager.
- Exit Maintenance Mode: Resumes normal reporting.

- **Update Memory Pool Size:** Applies memory-pool settings from the Static Service Pools configuration page.

You can perform all of these operations except Add Role Instances on individual nodes as role-level operations.

Managing Memory Pools

Cloudera Manager allows you to change resource allocations, such as memory and CPU, for the nodes it manages. If you are using co-located clusters, centrally managing resources can simplify your cluster management. If you are using separate Hadoop and Vertica clusters, you might prefer to manage Vertica separately as described in [Managing the Database](#) in the Administrator's Guide.

Use the Cloudera Manager "Static Service Pools" configuration page to configure resource allocations. The "Vertica Memory Pool" value, specified in GB, is the maximum amount of memory to allocate to the database on each node. If the configuration page includes "Cgroup Memory Hard Limit", set it to the same value as "Vertica Memory Pool".

After you have set these values, you can use the "Update Memory Pool Size" operation to apply the value to the managed nodes. This operation is equivalent to `ALTER RESOURCE POOL GENERAL MAXMEMORYSIZE`. Configuration changes in "Static Service Pools" do not take effect in Vertica until you perform this operation.

Uninstalling the Service

To uninstall the Vertica CSD, follow these steps:

1. Stop the Vertica service and then remove it from Cloudera Manager.
2. Remove the CSD file from `/opt/cloudera/csd`.
3. From the command line, restart the Cloudera Manager server.
4. In Cloudera Manager, restart the Cloudera Management Service.

Integrating Vertica with the MapR Distribution of Hadoop

MapR is a distribution of Apache Hadoop produced by MapR Technologies that extends the standard Hadoop components with its own features. Vertica can integrate with MapR in the following ways:

- You can read data from MapR through an NFS mount point. After you mount the MapR file system as an NFS mount point, you can use [CREATE EXTERNAL TABLE AS COPY](#) or [COPY](#) to access the data as if it were on the local file system. For ORC or Parquet data, see also [Reading Hadoop Columnar File Formats](#). This option provides the best performance for reading data.
- You can use the HCatalog Connector to read Hive data. Do not use the HCatalog Connector with ORC or Parquet data in MapR for performance reasons. Instead, mount the MapR file system as an NFS mount point and create external tables without using the Hive schema. See [Using the HCatalog Connector](#).
- You can create a storage location to store data in MapR using the native Vertica format (ROS). Mount the MapR file system as an NFS mount point and then use [CREATE LOCATION...ALL NODES SHARED](#) to create a storage location. (CREATE LOCATION does not support NFS mount points in general, but does support them for MapR.)

Other Vertica integrations for Hadoop are not available for MapR.

For information on mounting the MapR file system as an NFS mount point, see [Accessing Data with NFS](#) and [Configuring Vertica Analytics Platform with MapR](#) on the MapR website. In particular, you must configure MapR to add Vertica as a MapR service.

Examples

In the following examples, the MapR file system has been mounted as `/mapr`.

The following statement creates an external table from ORC data:

```
=> CREATE EXTERNAL TABLE t (a1 INT, a2 VARCHAR(20))  
AS COPY FROM '/mapr/data/file.orc' ORC;
```

The following statement creates an external table from Parquet data and takes advantage of partition pruning (see [Using Partition Columns](#)):

```
=> CREATE EXTERNAL TABLE t2 (id int, name varchar(50), created date, region varchar(50))  
    AS COPY FROM '/mapr/**/*' PARQUET(hive_partition_cols='created,region');
```

The following statement loads ORC data from MapR into Vertica:

```
=> COPY t FROM '/mapr/data/*.orc' ON ANY NODE ORC;
```

The following statement creates a storage location to hold ROS data in the MapR file system:

```
=> CREATE LOCATION '/mapr/my.cluster.com/data' SHARED USAGE 'DATA' LABEL 'maprfs';
```

Integrating with Apache Kafka

Welcome to the Vertica Data Streaming Integration Guide.

Audience

This book is intended for anyone who wants to load data from an existing data streaming message bus into a Vertica database.

Prerequisites

This document assumes that you have installed and configured Vertica as described in [Installing Vertica](#) and the Configuring the Database section of the Administrator's Guide. In addition, you must have Java 7.0 or later installed on your Vertica node. Refer to the [Vertica product documentation](#) to learn more.

In addition, this guide assumes you have installed and configured your data streaming platform. For details on installing and using third party applications, please refer to the documentation for that application.

How Vertica and Data Streaming Work Together

Vertica provides a high-performance loading mechanism for streaming data from a third party message bus into your Vertica database.

Data streaming provides high volumes of data with low latency. Vertica can process this data by running many COPY statements, each of which loads small amounts of data into your Vertica database. However, this process can become complex. Instead of writing complicated ETL processes and dispatching COPY statements manually, you can use the data streaming integration feature to automatically load data as it streams through your message bus.

The integration features between Vertica and data streaming consist of:

- A UDL library that loads data from a message bus into Vertica
- A job scheduler that uses the UDL library to continuously consume data from your message bus with exactly-once semantics
- Push-based [Monitoring Vertica Using Notifiers](#) capable of sending messages from Vertica to Kafka
- A [KafkaExport](#) function that outputs rows that Vertica was unable to send to Kafka

This process contributes to low latency and minimal impact on the other processes on the database.

Data Streaming Integration Terms

Vertica integrates with data streaming applications through a number of components. To use Vertica with data streaming, you should be familiar with these terms.

Terminology

Term	Description
Host	A data streaming server.
Source	A feed of messages in a common category which streams into the same Vertica target tables. In Apache Kafka, a source is known as a topic.
Partition	Unit of parallelism within data streaming. Data streaming splits a source into multiple partitions, which can each be served in parallel to consumers such as a Vertica database. Within a partition, all messages are ordered chronologically.
Offset	An index into a partition. This index is the position within an ordered queue of messages, not an index into an opaque byte stream.
Message	A unit of data within data streaming. The data is typically in JSON or AVRO format. Messages are loaded as rows into Vertica tables, and are uniquely identified by their source, partition, and offset.

Data Loader Terminology

Data Loader Term	Description
Job scheduler	A tool for continuous loading of data from data streaming into Vertica.
Micro-batch	A pair of statements that: a) load data from all sources

Data Loader Term	Description
	configured for this micro-batch into a Vertica target table; and b) update the progress within the streams. Being an atomic transaction, the micro-batch rolls back if any part of these operations fail so that each message is loaded exactly once.
Frame	Duration of time in which the scheduler will attempt to load each configured source once.
Stream	A feed of messages that is identified by a source and partition. The offset uniquely identifies the position within a particular source-partition stream.
Lane	A thread within a job scheduler instance that issues micro-batches to perform the load. The number of lanes available is based on the <code>PlannedConcurrency</code> of the job scheduler's resource pool. Multiple lanes allow for parallelism of micro-batches during a frame.

Data Streaming Job Scheduler

The data streaming *job scheduler* is a tool for continuous loading of streaming data into Vertica. The scheduler comes pre-packaged and installed with the Vertica rpm. For information on job scheduler requirements, refer to [Vertica Integration for Apache Kafka](#).

You can use the scheduler from any node by running the vkconfig script:

```
/opt/vertica/packages/kafka/bin/vkconfig
```

Note: If you do not want the scheduler to use Vertica host resources, or if you want to limit user access to the Vertica nodes, install the RPM on the host but do not create a database.

What the Scheduler Does

A scheduler instance works by creating frames and issuing micro-batches that load data into tables in your Vertica database. The scheduler loads all (enabled) sources to Vertica target tables during a single frame duration and continuously schedules frames as one completes.

You can add as many sources as you want to a single scheduler. Doing so allows the scheduler to collect all data from all these sources every single frame. This option is helpful if you have a large number of sources.

What Happens When You Create a Scheduler

When you create a new scheduler, the following events occur:

- The script creates a new Vertica schema with a name you specify (default is `stream_config`). You use this name to identify the scheduler during configuration.
- The script creates [Data Streaming Schema Tables](#) for the Vertica schema.
- The script creates the resource pool `kafka_default_pool`, if it does not already exist.

When the script creates the schema and associated tables, it sets the `LOCKTIMEOUT` session configuration parameter to 0 for the session running the micro-batches. When `LOCKTIMEOUT` is 0, data loads continuously because the scheduler does not have to wait for a lock to be released. If a table is already locked, Vertica cancels the frame and records an error in the events table.

The script creates the resource pool with defaults that benefit loading data into Vertica. While you can alter this pool to your business needs, Micro Focus strongly recommends following these guidelines:

- Leave the `QUEUE_TIMEOUT` parameter set to 0. This value is the default for job scheduler resource pools. A value of 0 allows data to load continuously. If the scheduler has to wait for resources, it cannot progress, compromising scheduling configurations.
- Leave reflexive moveout enabled. This option is on automatically when you create a schedule. With reflexive moveout turned on, the Tuple Mover automatically performs a moveout operation when data is committed so that your WOS always has space to load data. For large volumes of data (>100 MB) use a load method of `DIRECT`.

Validating Schedulers

When you create or configure a scheduler, Vertica validates the settings that you provide. Vertica checks the following settings:

- Confirms that all brokers in the specified cluster exist.
- Confirms that the specified source exists.
- Compares the host being configured to all existing cluster hosts. If the host already exists, Vertica cancels the configuration.
- Verifies that the number of partitions equals the number provided by the user. If no number of partitions is specified, Vertica sets the value to the number of partitions the source has in the cluster.
- Compares the cluster host list to the cluster being configured. If the cluster already exists, Vertica cancels the configuration.

You can configure validation checking using the `--validation-type` parameter in [Scheduler Utility Options](#).

Synchronizing Schedulers

By default, Vertica automatically synchronizes source information with host clusters. You can configure the synchronization interval using the `--refresh-config` Scheduler Utility Option. Vertica synchronizes the following settings:

- Updates the broker list for each cluster.
- Confirms that each source exists. If a source does not exist, Vertica disables it. If Vertica cannot reach the cluster at all, it takes no action.
- Updates the number of partitions for each source.

You can configure synchronization settings using the `--auto-sync` parameter in [Scheduler Utility Options](#).

Launching a Scheduler

To launch a scheduler, you must have a running streaming instance in a place Vertica can access. Additionally, you must configure the scheduler and set up sources for streaming.

When you launch a scheduler, the scheduler collects data from your sources, starting at the specified offset. You can view the [stream_microbatch_history](#) table to see what the scheduler is doing at any given time.

To learn how to create, configure, and launch a scheduler, see [Using Streaming Data with Vertica](#) in this guide.

You can also choose to bypass the scheduler. For example, you might want to do a single load with a specific range of offsets. For more information, see [Using COPY with Data Streaming](#) in this guide.

Launching Multiple Schedulers for High Availability

For high availability, you can launch two or more identical schedulers that target the same configuration schema. You can differentiate these different schedulers using the `--instance-name` CLI option with the [Launch Utility Options](#). The scheduler not in use remains in stand-by mode and can only perform scheduling if the active scheduler fails. In this case, the stand-by process allows the stream to continue without interruption.

Viewing Schedulers from the MC

You can also view the status of Kafka jobs from the MC. For more information, refer to [Viewing Load History](#).

Updating Schedulers After Vertica Upgrades

A scheduler is only compatible with the version of Vertica that created it. When you upgrade Vertica to a new major version or service pack, you must also update your schedulers using the `--upgrade` option before you can restart them. If you do not update a scheduler, you receive an error message if you try to launch it. For example:

```
$ vkconfig launch --conf weblog.conf
com.vertica.solutions.kafka.exception.FatalException: Configured scheduler schema and current
scheduler configuration schema version do not match. Upgrade configuration by running: vkconfig
scheduler --upgrade
    at com.vertica.solutions.kafka.scheduler.StreamCoordinator.assertVersion(StreamCoordinator.java:54)
    at com.vertica.solutions.kafka.scheduler.StreamCoordinator.run(StreamCoordinator.java:125)
    at com.vertica.solutions.kafka.Launcher.run(Launcher.java:205)
    at com.vertica.solutions.kafka.Launcher.main(Launcher.java:258)
Scheduler instance failed. Check log file. Check log file.
$ vkconfig scheduler --upgrade --conf weblog.conf
Checking if UPGRADE necessary...
UPGRADE required, running UPGRADE...
UPGRADE completed successfully, now the scheduler configuration schema version is v8.1.1
$ vkconfig launch --conf weblog.conf
. . .
```

Using Streaming Data with Vertica

To begin using streaming data and Vertica, use the `vkconfig` script to complete the following tasks from your Vertica database:

1. [Create a Cluster](#)
2. [Create and Configure a Scheduler](#)
3. [Create a Data Table](#)
4. [Create a Source](#)
5. [Create a Target](#)
6. [Create a Load-Spec](#)
7. [Create a Microbatch](#)
8. [Launch the Scheduler](#)

Note: You can view help for any of these steps using the command `/opt/vertica/packages/kafka/bin/vkconfig source --help`

Create a Cluster

You must associate at least one Kafka cluster with your scheduler. Vertica supports connecting multiple clusters to the same Vertica database. When you create a cluster, you identify the name of that cluster and the hosts it contains.

```
/opt/vertica/packages/kafka/bin/vkconfig cluster --create --config-  
schema kafka_conversion --cluster kafka --hosts  
1kafka01:9092,1kafka02:9092,1kafka03:9092
```

See [Cluster Utility Options](#) for more information.

Create and Configure Scheduler

Vertica includes a default `stream_config` scheduler. You can use this scheduler or create a new scheduler using the `vkconfig` script with the `scheduler` utility and `--create` option:

```
/opt/vertica/packages/kafka/bin/vkconfig scheduler --create
```

The `--create` option is all that is required to add a scheduler with default options.

You can use additional configuration parameters to further customize your scheduler.

The following example shows how you can use the commands to:

- Create a scheduler called "myScheduler" with the `--config-schema` option.
- Grant privileges to run the scheduler to `kafka_user` with the `--operator` option. The `dbadmin` user must specify kafka's additional privileges separately.
- Specify a frame duration of thirty seconds with the `--frame-duration` option.

```
/opt/vertica/packages/kafka/bin/vkconfig scheduler --create --  
config-schema myScheduler --operator kafka_user --frame-duration  
'00:00:30'
```

See [Scheduler Utility Options](#) for more information.

Create a Data Table

Before configuring a source for streaming, create a target table in your Vertica database to store the data you capture. To load data into a flexible table, you must be [using a flex parser](#). If you are not using flexible tables, you must verify that the data you are streaming matches the columns in your target table.

```
CREATE FLEX TABLE public.kafka_tgt();
```

You do not need to create a rejection table, which stores rejected messages, because the table is created automatically when you run the Source utility.

```
/opt/vertica/packages/kafka/bin/vkconfig cluster --create --cluster  
StreamCluster1 --hosts 10.10.10.10:9092,10.10.10.11:9092
```

Create a Source

To create and associate a source with a configured scheduler, use the source sub-utility.

The following example shows how you can create a source and associate it and three of its partitions to the default "stream_config" scheduler.

```
//opt/vertica/packages/kafka/bin/vkconfig source --create --config-schema stream_config --cluster StreamCluster1 --source conversion -partitions 3
```

See [Source Utility Options](#) for more information.

Create a Target

Once you have a source, configure a target table to receive data from that source. The following example identifies a target table of openx.conversion.

```
/opt/vertica/packages/kafka/bin/vkconfig target --create --config-schema kafka_conversion --target-schema openx --target-table conversion
```

See [Target Utility Options](#) for more information.

Create a Load-Spec

A load-spec provides parameters that Vertica uses when loading streaming data. It also identifies any filters that you want to apply to your data.

```
/opt/vertica/packages/kafka/bin/vkconfig load-spec --create --config-schema kafka_conversion --load-spec kafka
```

See [Load Spec Utility Options](#) for more information.

Create a Microbatch

A microbatch is a COPY that streams data to your target. The microbatch uses the parameters provided by your load-spec. The following example creates a new microbatch and assigns the source cluster kafka to it.

```
/opt/vertica/packages/kafka/bin/vkconfig microbatch --create --  
config-schema kafka_conversion --microbatch conversion --target-  
schema openx --target-table conversion --rejection-schema openx --  
rejection-table conversion_rej --load-spec kafka --add-source  
conversion --add-source-cluster kafka
```

See [Microbatch Utility Options](#) for more information.

Launch the Scheduler

After you create a table and associate a source, you are ready to launch the scheduler and start streaming data. Launch a configured scheduler by using the launch sub-utility.

The following example launches the default scheduler, stream_config, and specifies a properties file, configFile.properties, which contains additional CLI options. To start a different scheduler, use the --config-schema parameter option.

```
/opt/vertica/packages/kafka/bin/vkconfig launch --conf  
configFile.properties
```

Important: Micro Focus International plc does not recommend specifying a password on the command line. Instead, put the password in a properties file.

See [Launch Utility Options](#) for more information.

Using COPY with Data Streaming

You can manually stream data from Kafka into Vertica using a COPY statement. This streaming happens only for a limited time; when the COPY statement finishes, no additional messages are streamed from Kafka to Vertica. Manually copying data this way is useful when you have a specific set of messages in Kafka that you want to analyze. It is also useful when you want to explore the data in a Kafka stream before setting up a scheduler to continuously stream the data into Vertica.

The source of your COPY statement is always KafkaSource. Your COPY statement usually uses one of three parsers: KafkaParser, KafkaJSONParser, or KafkaAvroParser.

For example:

```
=> COPY public.from_kafka
  SOURCE KafkaSource(stream='iot_data|0|-2,iot_data|1|-2',
                    brokers='kafka01.example.com:9092',
                    duration=interval '10000 milliseconds',
                    executionparallelism='1',
                    stop_on_eof=true)
  PARSER KafkaAVROParser(schema_registry_url='http://localhost:8081/subjects/iot_data-
value/versions/1')
  REJECTED DATA AS TABLE public.rejections
  DIRECT NO COMMIT;
```

In the previous example:

- The KafkaSource streams data from partitions 0 and 1 of the topic named `iot_data`.
- The streaming starts from the earliest available message in the stream (set by the `-2` in the stream parameter).
- KafkaSource reads the data from the Kafka broker running on the host named `kafka01.example.com` on port 9092.
- The streaming continues until either 10000 milliseconds (10 seconds) pass or KafkaSource reaches the end of the stream.
- KafkaSource is limited to using a single thread to load data from the two partitions.
- The stream is parsed as Avro data.
- The schema that the Avro parser uses to parse the data is retrieved from a schema registry running on the local system.
- Rejected data is saved in a table named `public.rejections`.

When you use COPY TRICKLE, Vertica recommends enabling the ReflexiveMoveout configuration parameter to trigger a Tuple Mover moveout task every time a commit occurs:

```
=> ALTER DATABASE dbname SET ReflexiveMoveout=1;
```

Note: If you are copying data containing default values into a flex table, you must identify the default value column as `__raw__`. For more information, refer to "Handling Default Values During Loading" in [Bulk Loading Data into Flex Tables](#).

The following sections explain the parameters you can pass to the KafkaSource and its associated parsers.

KafkaSource

The KafkaSource UDL accesses data from a Kafka cluster. All Kafka parsers must use KafkaSource. Messages processed by KafkaSource must be at least one byte in length. KafkaSource writes an error message to vertica.log for zero length messages.

The syntax for calling KafkaSource is:

```
KafkaSource(  
  stream='topic_name|partition|start_offset[|end_offset][,...]'  
  [, brokers='host:port[,...]']  
  [, duration=interval]  
  [, executionparallelism='value']  
  [, stop_on_eof=Boolean]  
  [, eof_timeout=timeout])
```

Parameter	Description
stream	<p>Required. Defines the data to be loaded as a comma-separated list of one or more partitions. Each partition is defined by three required values and one optional value separated by pipe characters ():</p> <ul style="list-style-type: none">• <i>topic_name</i>: the name of the Kafka topic to load data from. You can read from different Kafka topics in the same stream parameter, with some limitations. See Loading from Multiple Topics in the Same Stream Parameter below for more information.• <i>partition</i>: the partition in the Kafka topic to copy.

Parameter	Description
	<ul style="list-style-type: none"> • <i>start_offset</i>: the offset in the Kafka topic where the load will begin. This offset is inclusive (the message with the offset <i>start_offset</i> is loaded). • <i>end_offset</i>: the optional offset where the load should end. This offset is exclusive (the message with the offset <i>end_offset</i> will not be loaded). To end a load using <i>end_offset</i>, you must supply an ending offset value for all partitions in the stream parameter. Attempting to set an ending offset for some partitions and not and not set offset values for others results in an error. If you do not specify an ending offset, you must supply at least one other ending condition using <i>stop_on_eof</i> or <i>duration</i>.
brokers	<p>A comma-separated list of host:port pairs of the brokers in the Kafka cluster. Vertica recommends running Kafka on a different machine than Vertica.</p> <p>Default Value: localhost:9092</p>
duration	<p>An INTERVAL that specifies the duration of the frame. After this specified amount of time, KafkaSource terminates the COPY statements. If this parameter is not set, you must set at least one other ending condition by using <i>stop_on_eof</i> or specify an ending offset instead. See Duration Note below for more information.</p>
executionparallelism	<p>A integer value between 1 and the number of partitions the node is loading from. Setting this parameter to a reduced value limits the number of threads used to process any COPY statement. It also increases the throughput of short queries issued in the pool, especially if the queries are executed concurrently.</p> <p>If you do not specify this parameter, Vertica automatically creates a thread for every partition.</p> <p>If the value you specify for the KafkaSource is lower than the value specified for the scheduler resource pool, the KafkaSource value applies. This value cannot exceed the</p>

Parameter	Description
	value specified for the scheduler resource pool.
<code>stop_on_eof</code>	Determines whether <code>KafkaSource</code> should terminate the <code>COPY</code> statement after it reaches the end of a file. If this value is not set, you must set at least one other ending condition using <code>duration</code> or by supplying ending offsets instead. Default Value: FALSE
<code>eof_timeout</code>	A timeslice of type <code>INTERVAL</code> . If a <code>COPY</code> command does not receive any Kafka messages within the <code>eof_timeout</code> interval, Vertica responds by ending that <code>COPY</code> statement. This parameter applies only if <code>stop_on_eof</code> is <code>TRUE</code> .

Loading from Multiple Topics in the Same Stream Parameter

You can load from multiple Kafka topics in a single stream parameter as long as you follow these guidelines:

- The data for the topics must be in the same format because you pass the data from `KafkaSource` to a single parser. For example, you cannot load data from one topic that is in Avro format and another in JSON format.
- Similarly, you need to be careful if you are loading Avro data and specifying an external schema from a registry. The Avro parser accepts a single schema per data load. If the data from the separate topics have different schemas, then all of the data from one of the topics will be rejected.
- The data in the different topics should have the same (or very similar) schemas, especially if you are loading data into a traditional Vertica table. While you can load data with different schemas into a flex table, there are only a few scenarios where it makes sense to combine dissimilar data into a single table.

Duration Note

The `duration` parameter applies to the length of time that Vertica allows the `KafkaSource` function to run. It usually reflects the amount of time the overall load statement takes.

However, if KafkaSource is loading a large volume of data or the data needs extensive processing and parsing, the overall runtime of the query can exceed the amount of time specified in `duration`.

Example

The following example demonstrates calling KafkaSource to load data from Kafka into an existing flex table named `web_test` with the following options:

- The stream is named `web_hits` which has a single partition.
- The load starts at the earliest message in the stream (identified by passing `-2` as the start offset).
- The load ends when it reaches the message with offset `10000`.
- The Kafka cluster's brokers are `kafka01` and `kafka03` in the `example.com` domain.
- The brokers are listening on port `6667`. (This is port number that the Hortonworks Hadoop distribution assigns to its Kafka brokers.)
- The load ends if it reaches the end of the stream before reaching the message with offset `10000`. If you do not supply this option, the connector waits until Kafka sends a message with offset `10000`.
- The loaded data is sent to the `KafkaJSONParser` for processing.

```
=> COPY web_test
      SOURCE KafkaSource(stream='web_hits|0|-2|10000',
                        brokers='kafka01.example.com:6667,kafka03.example.com:6667',
                        stop_on_eof=true)
      PARSER KafkaJSONParser();
Rows Loaded
-----
          1068
(1 row)
```

KafkaOffsets

The `KafkaOffsets` user-defined transform function returns load operation statistics generated by the most recent invocation of `KafkaSource`. Query `KafkaOffsets` to see the metadata produced by your most recent load operation. You can query `KafkaOffsets` after each

KafkaSource invocation to view information about that load. If you are using the scheduler, you can also view historical load information in the [stream_microbatch_history](#) table.

For each load operation, KafkaOffsets returns the following:

- source kafka topic
- source kafka partition
- starting offset
- ending offset
- number of messages loaded
- number of bytes read
- duration of the load operation
- end message
- end reason

The following example demonstrates calling KafkaOffsets to show partition information on the table named `web_test` that was loaded using KafkaSource.

```
=> SELECT kpartition, start_offset, end_offset, msg_count, ending FROM (select KafkaOffsets() over()  
FROM web_test) AS stats ORDER BY kpartition;  
kpartition | start_offset | end_offset | msg_count | ending  
-----+-----+-----+-----+-----  
0 | -2 | 9999 | 1068 | END_OFFSET
```

The output shows that KafkaSource loaded 1068 messages (rows) from Kafka in a single partition. The KafkaSource ended the data load because it reached the ending offset.

Note: The values shown in the `start_offset` column are exclusive (the message with the shown offset was not loaded) and the values in the `end_offset` column are inclusive (the message with the shown offset was loaded). This is the opposite of the values specified in the KafkaSource's `stream` parameter. The difference between the inclusiveness of KafkaSource's and KafkaOffset's start and end offsets are based on the needs of the job scheduler. KafkaOffset is primarily intended for the job scheduler's use, so the start and end offset values are defined so the scheduler can easily start streaming from where left off.

KafkaParser

The KafkaParser does not take any parameters. The parser loads the data bytes into a regular Vertica table directly from Kafka. You can use this parser as a catch-all for unsupported formats.

KafkaJSONParser

The KafkaJSONParser parses JSON-formatted Kafka messages and loads them into a regular Vertica table or a Vertica flex table.

The syntax for calling the parser is:

```
KafkaJSONParser(  
    [flatten_maps=Boolean]  
    [, flatten_arrays=Boolean]  
    [, start_point=Boolean]  
    [, omit_empty_keys=Boolean]  
    [, reject_on_duplicate=Boolean]  
    [, reject_on_materialized_type_error=Boolean]  
    [, reject_on_empty_key=Boolean])
```

Parameter	Description
flatten_maps	Flattens all JSON maps if set to TRUE
flatten_arrays	Flattens JSON arrays if set to TRUE
start_point	Specifies the name of a key in the JSON load data at which to begin parsing. The parser ignores all data before the start_point value. The parser processes data after the first instance, and up to the second, ignoring any remaining data.
omit_empty_keys	If set to TRUE, omits any key from the load data that does not have a value set.
reject_on_duplicate	If set to TRUE, rejects data that contains duplicate key names.
reject_on_materialized_type_error	When set to TRUE, rejects the data row if the data includes keys matching an existing materialized column and has a key that cannot be mapped into the materialized column's data

Parameter	Description
	type.
reject_on_empty_key	If set to TRUE, rejects any row containing a key without a value.

See [Loading JSON Data](#) for more information.

The following example demonstrates loading JSON data from Kafka. The parameters in the statement define to the load to:

- Load data into the pre-existing table named logs.
- The KafkaSource streams the data from a single partition in the source called server_log.
- The Kafka broker for the data load is running on the host named kafka01 on port 9092.
- KafkaSource stops loading data after either 10 seconds or on reaching the end of the stream, whichever happens first.
- The KafkJSONParser flattens any arrays or maps in the JSON data.

```
=> COPY logs SOURCE KafkaSource(stream='server_log|0|0',
                                stop_on_eof=true,
                                duration=interval '10 seconds',
                                brokers='kafka01:9092')
    PARSER KafkaJSONParser(flatten_arrays=True, flatten_maps=True);
```

KafkaAVROParser

The KafkaAVROParser parses AVRO-formatted Kafka messages and loads them into a regular Vertica table or a Vertica flex table.

```
KafkaAVROParser(  
    [reject_on_materialized_type_error=Boolean]  
    [, flatten_maps=Boolean]  
    [, flatten_arrays=Boolean]  
    [, flatten_records=Boolean]  
    [, external_schema=JSON_string]  
    [, codec='default'|'snappy'|'null']  
    [, with_metadata=Boolean]  
    [, schema-registry-url=url]  
    [, schema_registry_subject=subject_name]  
    [, schema_registry_version=version_number])
```

Parameter	Description
<code>reject_on_materialized_type_error</code>	When set to TRUE, rejects the data row if it contains a materialized column value that cannot be mapped into the materialized column's data type.
<code>flatten_maps</code>	If set to TRUE, flattens all Avro maps.
<code>flatten_arrays</code>	If set to TRUE, flattens Avro arrays.
<code>flatten_records</code>	If set to TRUE, flattens all Avro records.
<code>external_schema</code>	Specifies the schema of the Avro file as a JSON string. If this parameter is not specified, the parser assumes that each message has the schema on it. If you are using a schema registry, do not use this parameter.
<code>codec</code>	Specifies the codec in which the Avro file was written. Valid values are: <ul style="list-style-type: none"> 'default' - Avro's default 'snappy' - snappy compression 'null' - data is not compressed and codec is not needed
<code>with_metadata</code>	If set to TRUE, messages include Avro datum, schema, and object metadata. By default, the KafkaAvroParser parses messages without including schema and metadata. If you enable this parameter, write your messages using the Avro API and confirm they contain only Avro datum. The default value is FALSE.
<code>schema_registry_url</code>	Specifies the URL of the Confluent schema registry. This parameter is required to load data based on a schema registry version. If you are using an external schema, do not use this parameter. For more information, refer to Using a Schema Registry with Kafka .
<code>schema_registry_subject</code>	In the schema registry, the subject of the schema to use for data loading.
<code>schema_registry_version</code>	In the schema registry, the version of the schema to use for data loading.

See [Loading Avro Data](#) for more information.

The following example demonstrates loading data from Kafka in an Avro format. The statement:

- Loads data into an existing flex table named `weather_logs`.
- Copies data from the default Kafka broker (running on the local system on port 9092).
- The source is named `temperature`.
- The source has a single partition.
- The load starts from offset 0.
- The load ends either after 10 seconds or the load reaches the end of the source, whichever occurs first.
- The `KafkaAvroParser` does not flatten any arrays, maps, or records it finds in the source.
- The schema for the data is provided in the statement as a JSON string. It defines a record type named `Weather` that contains fields for a station name, a time, and a temperature.
- Rejected rows of data are saved to a table named `t_rejects1`.

```
=> COPY weather_logs
  SOURCE KafkaSource(stream='temperature|0|0', stop_on_eof=true,
                    duration=interval '10 seconds')
  PARSER KafkaAvroParser(flatten_arrays=False, flatten_maps=False, flatten_records=False,
                        external_schema='{"type": "record", "name": "Weather", "fields": '
                                      ' [{"name": "station", "type": "string"}, '
                                      ' {"name": "time", "type": "long"}, '
                                      ' {"name": "temp", "type": "int"} ]}')
  REJECTED DATA AS TABLE "t_rejects1";
```

Parsing Custom Formats

Vertica supports the use of user-defined filters to manipulate data arriving from your streaming message bus. You can apply these filters to data before you parse it. By default, data that flows from the source does not contain message boundaries. The default Kafka parsers can parse this format. However, other user-defined and Vertica parsers require additional message processing. Filters provide the ability to manipulate data using user-defined parsers.

Filters for Use with Kafka Data

Vertica includes the following filters:

- `KafkaInsertDelimiters` — Transforms the Kafka data stream by inserting a user-specified delimiter between each record. The delimiter can contain any characters and be of any length. This parser uses the following syntax:

```
KafkaInsertDelimiters(delimiter = 'delimiter')
```

- `KafkaInsertLengths` — Transforms the Kafka data stream by inserting the length of the following record in bytes at the beginning of the record. Vertica writes lengths as 4-byte uint32 values in Big Endian network byte order. For example, a 100-byte record would be preceded by 0x00000064.

```
KafkaInsertLengths()
```

Note: The Vertica provided filters are mutually exclusive. You cannot use both to process a Kafka data stream.

Vertica also supports the use of additional Vertica and user-defined filters. If you are using a Vertica filter, it must appear first in the filter list. Use a comma to delimit multiple filters. If you are using a non-Kafka parser, you must use at least one filter to prepare your content for that parser. If you do not provide a filter, the parser fails with the message:

```
Input is not from Kafka source.
```

Examples

The following example shows how you can delimit data streams from two hosts by the string `\n`. You can then use a CSV parser to parse the content.

```
=> COPY stream_data.target_table SOURCE KafkaSource (stream='source1|1|1,source2|2|2',  
brokers='host1:9092,host2:9092',  
duration= INTERVAL'timeslice')  
FILTER KafkaInsertDelimiters(delimiter = '\n')  
PARSER MyCsvParser(recordTerminator = '\n');
```

The following example shows how you can specify that a Vertica filter and a decryption filter process a single Kafka data stream. Using the length information the `KafkaInsertLengths` filter injects, the parser can identify each record and parse it individually.

```
=> COPY stream_data.target_table SOURCE KafkaSource (stream='source1|1|1, brokers='host1:9092')  
FILTER KafkaInsertLengths() DecryptFilter(parameter=Key)  
PARSER ComplexParser(parameter = 'value');
```

Using a Schema Registry with Kafka

Vertica supports the use of a Confluent schema registry for Avro schemas with the [KafkaAVROParser](#). By using a schema registry, you enable the Avro parser to parse and decode messages written by the registry and to retrieve schemas stored in the registry. In addition, a schema registry enables Vertica to process streamed data without sending a copy of the schema with each record. Vertica can access a schema registry in the following ways:

- schema ID
- subject and version

Note: If you use the compatibility config resource in your schema registry, you must specify a value of BACKWARD. For more information on installing and configuring a schema registry, refer to the [Confluent documentation](#).

Schema ID Loading

In schema ID based loading, the Avro parser checks the schema ID associated with each message to identify the correct schema to use. A single COPY statement can reference multiple schemas. Because each message is not validated, Vertica recommends that you use a flex table as the target table for schema ID based loading.

The following example shows a COPY statement that refers to a schema registry located on the same host.

```
=> COPY logs source kafkasource(stream='simple|0|0', stop_on_eof=true,  
duration=interval '10 seconds') parser  
KafkaAvroParser(schema_registry_url='http://localhost:8081/');
```

Subject and Version Loading

In subject and version loading, you specify a subject and version in addition to the schema registry URL. The addition of the subject and version identifies a single schema to use for all messages in the COPY. If any message in the statement is incompatible with the schema, the COPY fails. Because all messages are validated prior to loading, Vertica recommends that you use a standard Vertica table as the target for subject and version loading.

The following example shows a COPY statement that identifies a schema subject and schema version as well as a schema registry.

```
=> COPY t source kafkasource(stream='simpleEvolution|0|0',
stop_on_eof=true, duration=interval '10 seconds') parser
KafkaAvroParser(schema_registry_url='http://repository:8081/schema-repo/',
schema_registry_subject='simpleEvolution-value', schema_registry_version='1')
REJECTED DATA AS TABLE "t_rejects";
```

Configuring Kafka for Vertica

The following are settings that are used to optimize Kafka performance with Vertica. Some settings, such as `message.max.bytes`, are configurable on multiple Kafka components.

For detailed information on Apache Kafka configuration settings, refer to the [Apache Kafka rdkafka documentation](#).

Producer Settings

Kafka producers are the processes that publish messages to Kafka brokers.

Setting	Affects	Notes
<code>queue.buffering.max.messages</code>	Latency	Specifies the size of the Vertica producer queue. If Vertica generates too many messages too quickly, the queue can fill, resulting in dropped messages. Increasing this value consumes more memory, but reduces the chance of lost messages.
<code>queue.buffering.max.ms</code>	Latency	Specifies the frequency with which Vertica flushes the producer message queue. Lower values decrease latency at the cost of throughput. Higher values increase throughput, but can cause the producer queue (set by <code>queue.buffering.max.messages</code>) to fill more frequently, resulting in dropped messages.
<code>message.max.bytes</code>	Reliability	Specifies the maximum size of a Kafka message. This size is the size of the JSON serialized message. To prevent truncated messages, set this value to the size of the largest possible message. This values should be the same on your sources, brokers, and producers.
<code>message.send.max.retries</code>	Reliability	Specifies the number of attempts the

Setting	Affects	Notes
		producer makes to deliver the message to a broker. Higher values increase the chance of success.
retry.backoff.ms	Reliability	Specifies the interval Vertica waits before resending a failed message.
request.required.acks	Reliability	Specifies how many broker replica acknowledgments Kafka requires before it considers message delivery successful. Requiring acknowledgments increases latency. Removing acknowledgments increases the risk of message loss.
request.timeout.ms	Reliability	Specifies the interval that the producer waits for a response from the broker. Broker response time is affected by server load and the number of message acknowledgments you require. Higher values increase latency.

Broker Settings

Kafka brokers receive messages from producers and distribute them among Kafka consumers. Configure these settings on the brokers themselves. These settings function independently of your producer and consumer settings.

Setting	Affects	Notes
message.max.bytes	Reliability	Specifies the maximum size of a Kafka message. This size is the size of the JSON serialized message. To prevent truncated messages, set this value to the size of the largest possible message. This values should be the same on your sources, brokers, and producers.
num.network.threads	Performance	Specifies the number of network threads the broker uses to accept network requests. More threads can increase your concurrency.

Setting	Affects	Notes
num.io.threads	Performance	Specifies the number of network threads the broker uses to receive and process requests. More threads can increase your concurrency.

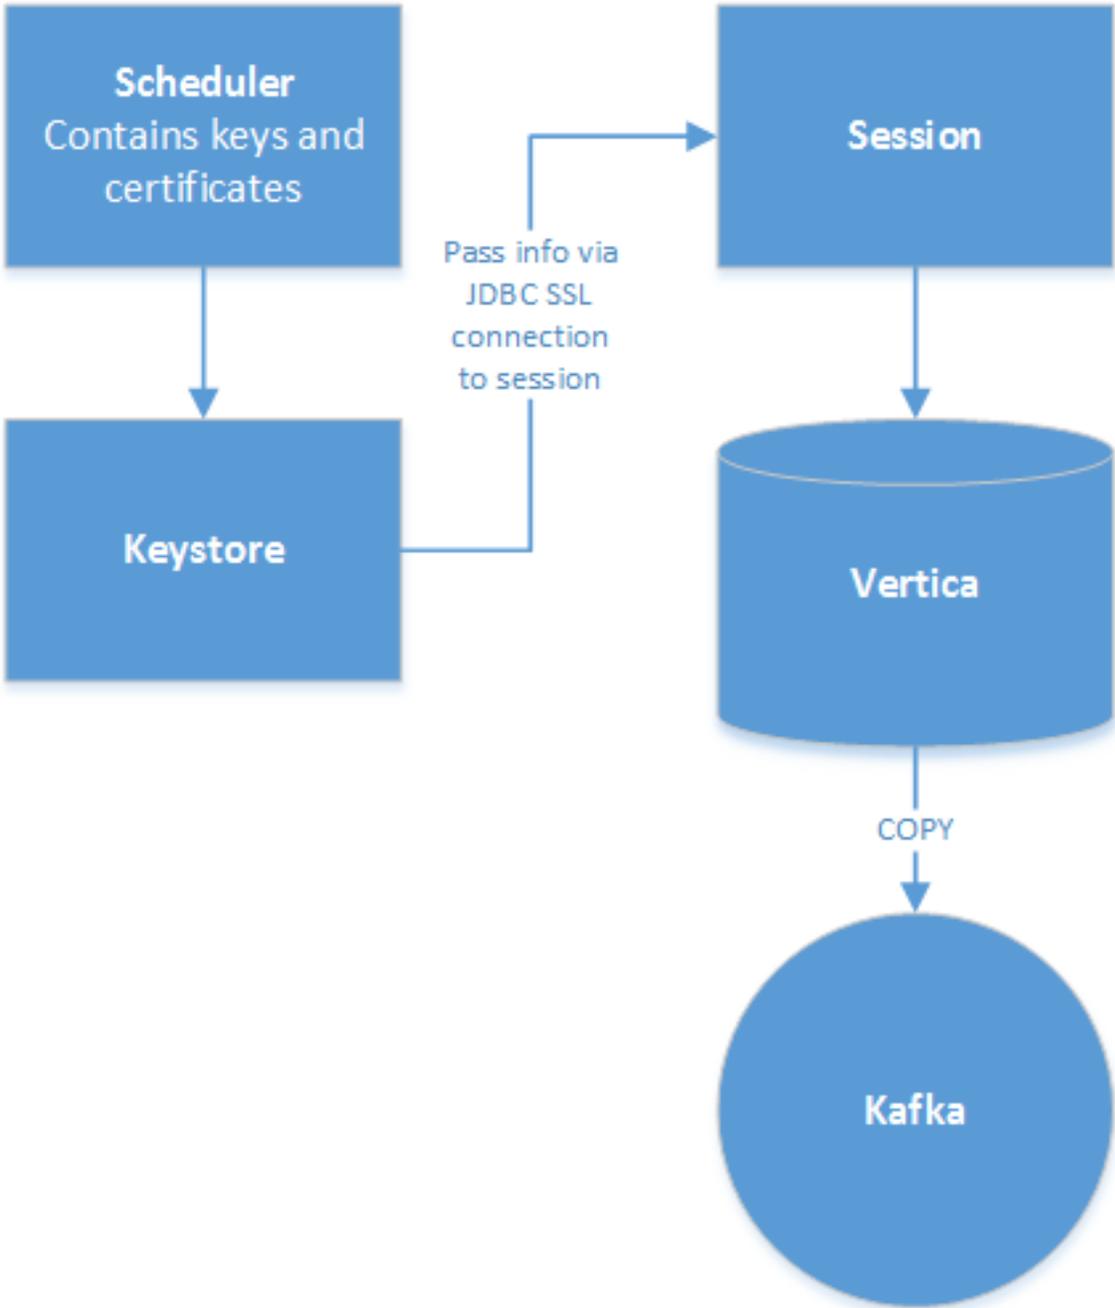

Consumer Settings

Kafka consumers process the stream of messages distributed by the brokers. You can set these values using the `kafka_conf` parameter on the KafkaSource UDL or using the `--parser-parameters` setting in the [Load Spec Utility Options](#).

Setting	Affects	Notes
message.max.bytes	Reliability	Specifies the maximum size of a Kafka message. This size is the size of the JSON serialized message. To prevent truncated messages, set this value to the size of the largest possible message. This values should be the same on your sources, brokers, and producers.

Using SSL with Kafka

Vertica supports the use of SSL authentication between Kafka, Vertica, and the Kafka Scheduler. For information on SSL authentication with Vertica, refer to [TLS/SSL Server Authentication](#).

Scheduler/Vertica Communication

The scheduler uses keystore information on a per-session basis to communicate with Vertica. It passes information through a JDBC SSL connection to Vertica. The Scheduler connects to Vertica through a JVM. As a result, your SSL keys must be within the JVM keystore and the CA must be within the JVM truststore. When connecting between Vertica and Kafka, the Scheduler uses its keys to authenticate Kafka.

Vertica/Kafka Communication

In a typical configuration, each Kafka broker contains its own key store and trust store. Vertica and Kafka authenticate against your certifying authority. Kafka authenticates by means of the librdkafka library.

Adding SSL to Vertica/Kafka Integration

To add SSL authentication to your Vertica/Kafka integration, you must configure SSL support on various components in Vertica, Kafka, and Java.

1. [Configure Vertica for SSL.](#)
2. [Configure Kafka for SSL.](#)
3. [Configure your scheduler for SSL.](#)
4. [Configure Java on your scheduler for SSL.](#)

Configuring Kafka for SSL

A typical Kafka/Vertica configuration consists of the following steps:

1. [Create a certifying authority certificate.](#)
2. [Create a trust store and key store on your Kafka brokers using your certificate.](#)

3. [Configure the server.properties file on each Kafka broker to use your key store.](#)

Create a Certifying Authority Certificate

If you do not already have one, create a certifying authority certificate, as shown in the following example.

```
openssl req -new -x509 -keyout ca-key -out ca-cert -days 365
```

For more information on generating a certificate, refer to the [OpenSSL documentation](#).

Create a Trust Store and Key Store on your Kafka Brokers

You must create a trust store and key store on each of your Kafka brokers.

1. Create a trust store on your Kafka broker by importing your certificate. The following example shows a typical trust store command.

```
keytool -keystore kafka.truststore.jks -alias caroot -import -file ca-cert
```

2. Create a key store on your Kafka broker, as shown in the following example. The following example shows a typical series of key store commands.

```
keytool -keystore brokername.keystore.jks -alias brokername -validity 365 -keyalg RSA -genkey  
keytool -keystore brokername.keystore.jks -alias brokername -certreq -file cert-file  
openssl x509 -req -CA ca-cert -CAkey ca-key -in cert-file -out cert-signed -days 365 -  
CAcreateserial  
keytool -keystore brokername -alias caroot -import -file ca-cert  
keytool -keystore brokername.keystore.jks -alias broker$$i -import -file cert-signed
```

3. Repeat the key store and trust store configuration process for each Kafka broker, specifying the correct alias and key store name for that broker.

Configure the server.properties File on Each Kafka Broker to Use Your Key Store

You can pass SSL configuration information from your Kafka broker to Vertica by including [user defined session parameters](#) in your server.properties file. For more information on configuring your server.properties file, refer the [Apache Kafka documentation](#).

```
kafka_Enable_SSL=1  
kafka_SSL_CA=<Certifying Authority contents>  
kafka_SSL_Certificate=<Certificate contents>  
kafka_SSL_PrivateKey_secret=<Private Key contents>  
kafka_SSL_PrivateKeyPassword_secret=<Private Key password>
```

Configuring Your Scheduler for SSL

Your scheduler requires a trust store, key store and launch parameters to use SSL.

Create a Trust Store and and Key Store on Your Scheduler

You must create a trust store and key store on your scheduler.

1. Create a trust store on your scheduler by importing your certificate. The following example shows a typical trust store command.

```
keytool -keystore schedulername.truststore.jks -alias caroot -import -file ca-cert
```

2. Create a key store on your scheduler, as shown in the following example. The following example shows a typical series of key store commands.

```
keytool -keystore schedulername.keystore.jks -alias vsched -validity 365 -keyalg RSA -genkey  
keytool -keystore schedulername.keystore.jks -alias vsched -certreq -file cert-file  
openssl x509 -req -CA ca-cert -CAkey ca-key -in cert-file -out cert-signed -days 365  
keytool -keystore schedulername.keystore.jks -alias caroot -import -file ca-cert  
keytool -keystore schedulername.keystore.jks -alias vsched -import -file cert-signed
```

Launch Your Scheduler with SSL Enabled

When you launch your scheduler, you must include SSL parameters to enable SSL support. For more information on scheduler utility parameters, refer to [Scheduler Utility Options](#).

The following example shows a launch command including all the required SSL parameters

```
/opt/vertica/packages/kafka/bin/vkconfig launch --enable-SSL true  
--ssl-ca-alias authenticcert --ssl-key-alias ourkey --ssl-key-password secret
```

Configuring Java to Use SSL

The scheduler uses JDBC to communicate with your Vertica session. As a result, you must configure your scheduler JVM and JDBC settings for SSL. For information on configuring your JVM and JDBC, refer to the [Java documentation](#).

Configure Your Scheduler JVM

To use SSL authentication with Kafka, you must configure your scheduler JVM to use the key store and trust store you created. Vertica recommends that you use a configuration file to provide this information. Include the following options in your configuration file:

```
-DJVMjavax.net.ssl.trustStore=/path/to/truststore  
-DJVMjavax.net.ssl.keyStore=/path/to/keystore  
-DJVMjavax.net.ssl.keyStorePassword=password1234
```

Configure Your Scheduler JDBC to use SSL

Add the following to your generated JDBC string:

```
--jdbc-opt ssl=true
```

Using SSL Without a Scheduler

You can also configure Vertica to interact with Kafka without using a scheduler. In this case, Kafka integration requires user-defined extensions (UDXs) that do not have access to global Vertica configuration parameters. As a result, you must load your SSL Certificates as session parameters.

1. Configure your [MaxSessionUDParameterSize](#) to a value larger than the length of your certificate chain.

```
ALTER SESSION SET MaxSessionUDParameterSize=100000
```

2. Provide certificate, key, and password information to your session. Vertica does not log parameters that end in `_secret`. For more information on these parameters, refer to [User-Defined Session Parameters](#).

```
=> ALTER SESSION SET UDPARAMETER kafka_SSL_Certificate='<client.crt contents>';  
ALTER SESSION SET UDPARAMETER kafka_SSL_PrivateKey_secret='<client.key contents>';  
ALTER SESSION SET UDPARAMETER kafka_SSL_PrivateKeyPassword_secret='<password, if applicable>';  
ALTER SESSION SET UDPARAMETER kafka_SSL_CA='<ca.crt contents>';
```

3. Enable SSL authentication for your session.

```
=> ALTER SESSION SET kafka_Enable_SSL=1;
```

You can now run COPY commands with SSL authentication.

Streaming Utility Options

Vertica includes the `vkconfig` utility to help you configure your streaming data resources for use with your database.

The streaming data integration feature for Vertica consists of the following utilities:

- [Shared Utility Options](#)
- [Cluster Utility Options](#)
- [Scheduler Utility Options](#)
- [Load Spec Utility Options](#)
- [Microbatch Utility Options](#)
- [Source Utility Options](#)
- [Target Utility Options](#)
- [Launch Utility Options](#)

You can use the options in the [Shared Utility Options](#) table with any of the utilities. Utility-specific options appear in their respective tables.

Shared Utility Options

These utility options are available across the functional areas of the streaming data configuration utility.

Option	Description
<code>--config-schema</code> <i>schema_name</i>	Identifier for the Vertica schema. This value is the same name as the scheduler. You use this name to identify the scheduler during configuration. Default Value: stream_config
<code>--help</code>	Prints out a help menu listing available options with a description.

Option	Description
<code>--version</code>	Displays the version number of the scheduler.
<code>--dbhost <i>host name</i></code>	The host name or IP address of the Vertica node acting as the initiator node for the scheduler. Default Value: localhost
<code>--dbport <i>port_number</i></code>	The port to use to connect to a Vertica database. Default Value: 5433
<code>--username <i>username</i></code>	The Vertica database user. Default Value: Current user
<code>--password <i>password</i></code>	Password for the database user.
<code>--jdbc-url <i>url</i></code>	A complete JDBC URL that overrides other database connection parameters.
<code>--conf <i>filename</i></code>	A properties file (.properties) that contains configuration details for the CLI command. The configuration file follows the standard java properties file format. Using a properties file is helpful for options that do not change across CLI commands. Any additional options added at the command line override parameters set in the properties file. The configuration file supports all Kafka properties. For a list of properties, refer to kafka.apache.org/08/configuration.html .
<code>--create</code>	Creates a new instance of the supplied type. Renamed from <code>--add</code> .
<code>--update</code>	Updates an existing instance of the supplied type. Renamed from <code>--edit</code> .
<code>--delete</code>	Delete an instance of the supplied type. Renamed from <code>--remove</code> .

Examples

These examples show how you can use the shared utility options.

Display help for the scheduler utility:

```
/opt/vertica/packages/kafka/bin/vkconfig scheduler --help
PARAMETER      REQUIRED #ARGS  DESCRIPTION
conf            no          1          Allow the use of a properties file to associate parameter keys and
values. This file enables command string reuse and cleaner command strings.
help           no          0          Outputs a help context for the given subutility.
version        no          0          Outputs the current Version of the scheduler.
```

Use a property file to store parameters for the utility. You can override any stored parameter from the command line:

```
#config.properties:
username=myuser
password=mypassword
dbhost=localhost
dbport=5433

/opt/vertica/packages/kafka/bin/vkconfig source --update --conf config.properties
```

Scheduler Utility Options

The scheduler is a tool that continuously loads data from Kafka into Vertica. Use the scheduler utility to create, update, or delete a scheduler, defined by `config-schema`. If you do not specify a scheduler, utility commands apply to the default `stream_config` scheduler.

Option	Description
<code>--operator <i>username</i></code>	<p>Allows the dbadmin to grant privileges to a previously created Vertica user.</p> <p>This option gives the specified user all privileges on the scheduler instance and EXECUTE privileges on the libkafka library and all its UDxs.</p> <p>Granting operator privileges gives the user the right to read data off any source in any cluster that can be reached from the Vertica node.</p>

Option	Description
	<p>The dbadmin must grant the user separate permission for them to have write privileges on the target tables.</p> <p>Requires the <code>--create shared utility</code> option.</p> <p>To revoke privileges, use the <code>--remove</code> option with the <code>--operator</code> option.</p>
<code>--drop schema_name</code>	Drops the specified schema. After you drop the configuration information, you cannot recover it.
<code>--add-operator user_name</code>	Adds a user account that operates the specified configuration. Requires the <code>--update shared utility</code> option.
<code>--remove-operator user_name</code>	Deletes a user account that operates the specified configuration. Requires the <code>--update shared utility</code> option.
<code>--upgrade</code>	Upgrades the existing scheduler and configuration schema to the current version. The upgraded version of the scheduler is not backwards compatible with earlier versions. To upgrade an alternate schema, use the <code>upgrade-to-schema</code> parameter.
<code>--upgrade-to-schema schema_name</code>	Specifies a configuration schema to use with the upgraded scheduler. Requires the <code>--upgrade scheduler utility</code> option. If you do not include this parameter with an upgrade, Vertica upgrades the current schema.
<code>--frame-duration HH:MM:SS</code>	<p>The interval of time that all individual frames last with this scheduler. Vertica must have enough time to complete COPY tasks within this duration. You can calculate the average available time per COPY using the following equation:</p> $TimePerCopy = (FrameDuration * Parallelism) / Microbatches$ <p>Vertica requires at least 100 milliseconds per COPY to function. You can increase the available time per COPY by increasing your frame duration.</p> <p>Default Value:</p> <p>00:00:10</p>
<code>--config-refresh HH:MM:SS</code>	The interval of time that the scheduler runs before synchronizing its settings and updating its cached metadata (such as changes made

Option	Description
	<p>by using the <code>--update</code> option). Renamed from <code>--config-refresh-interval</code>.</p> <p>Default Value: 00:05:00</p>
<p><code>--resource-pool</code> <i>pool_name</i></p>	<p>The resource pool to be used by all queries executed by this scheduler. You must create this pool in advance if you are not using the default pool.</p> <p>Default Value: stream_default_pool</p>
<p><code>--new-source-policy</code> FAIR START END</p>	<p>Determines how much Vertica allocates resources to the newly added source.</p> <p>Valid Values:</p> <ul style="list-style-type: none"> • FAIR: Takes the average length of time from the previous batches and schedules itself appropriately. • START: All new sources start at the beginning of the frame. The batch receives the minimal amount of time to run. • END: All new sources start at the end of the frame. The batch receives the maximum amount of time to run. <p>Default Value: FAIR</p>
<p><code>--eof-timeout-ms</code> <i>number of milliseconds</i></p>	<p>If a COPY command does not receive any messages within the eof-timeout-ms interval, Vertica responds by ending that COPY statement.</p> <p>Default Value: 1 second</p> <p>See Using COPY with Data Streaming in this guide for more information.</p>
<p><code>--message_max_bytes</code> <i>max_message_size</i></p>	<p>The maximum message size, in bytes.</p> <p>Default Value:</p>

Option	Description
	1048576
<code>--fix-config</code>	Repairs the configuration and re-creates any missing tables. Valid only with the <code>--update</code> shared configuration option.
<code>--validation-type</code> ERROR WARN SKIP	<p>Specifies the level of validation performed on the scheduler. Invalid SQL syntax and other errors can cause invalid micro-batches. Vertica supports the following validation types:</p> <ul style="list-style-type: none"> • ERROR - Cancel configuration or creation if validation fails. If you do not specify a validation type, this value is the default. • WARN - Proceed with task if validation fails, but display a warning. • SKIP - Perform no validation. <p>For more information on validation, refer to Data Streaming Job Scheduler.</p> <p>Renamed from <code>--skip-validation</code>.</p>
<code>--auto-sync</code> TRUE FALSE	<p>When TRUE, Vertica automatically synchronizes scheduler source information at the interval specified in <code>--config-refresh</code>.</p> <p>Default Value:</p> <p>TRUE</p> <p>For more information on synchronization, refer to Data Streaming Job Scheduler.</p>

Examples

These examples show how you can use the scheduler utility options.

Give a user, Jim, privileges on the StreamConfig scheduler. Specify that you are making edits to the StreamConfig scheduler with the `--config-schema` option:

```
/opt/vertica/packages/kafka/bin/vkconfig scheduler --update --config-schema StreamConfig --add-operator Jim
```

Edit the default `stream_config` scheduler so that every COPY statement waits for data for one second before ending:

```
/opt/vertica/packages/kafka/bin/vkconfig scheduler --update --eof-timeout-ms 1000
```

Upgrade the scheduler and streaming schema to the current version:

```
/opt/vertica/packages/kafka/bin/vkconfig scheduler --upgrade --config-schema old_config --upgrade-to-schema new_schema
```

Drop the schema scheduler219a:

```
/opt/vertica/packages/kafka/bin/vkconfig scheduler --drop --config-schema scheduler219a --username release
```

Cluster Utility Options

The Kafka Cluster utility enables you, as an administrator, to connect multiple clusters to a single Vertica database.

Option	Description
<code>--cluster</code> <i>cluster_name</i>	A unique, case insensitive name for the cluster.
<code>--new-cluster</code> <i>cluster_name</i>	The updated name for the cluster. Requires the <code>--update</code> shared utility option.
<code>--hosts</code> <i>b1:port,b2:port...</i>	Identifies the hosts that you want to add, edit, or remove from a Kafka cluster. To identify multiple hosts, use a comma delimiter. Renamed from <code>--brokers</code> .

Note: Vertica does not validate host lists or confirm that clusters are unique. Labeling the same cluster with multiple IDs can introduce duplicate data into your database.

Examples

This example shows how you can create the cluster, StreamCluster1, and assign two hosts:

```
/opt/vertica/packages/kafka/bin/vkconfig cluster --create --cluster StreamCluster1 --hosts 10.10.10.10:9092,10.10.10.11:9092
```

Source Utility Options

Use the source utility to create, update, or delete a source.

Option	Description
<code>--source</code> <i>source_name</i>	The source to add, remove, or edit from a scheduler configuration. In most cases, the source is the name of your Kafka cluster.
<code>--new-source</code> <i>source_name</i>	Updates the name of an existing source to the name specified by this parameter. Requires: <code>--update</code> shared utility option
<code>--partitions</code> <i>count</i>	Used to create all partitions from 0 to $n-1$. Default Value: 1 Requires: <code>--create</code> and <code>--source</code> options You must keep this consistent with the number of partitions in the source. Renamed from <code>--num-partitions</code> .
<code>--cluster</code> <i>cluster_name</i>	Identifies the cluster that you want to edit.
<code>--new-cluster</code> <i>cluster_name</i>	Updates the name of an existing cluster to the name specified by this parameter. All sources referencing the old cluster source now target this cluster. Requires: <code>--update</code> and <code>--source</code> options
<i>enabled</i> TRUE FALSE	When TRUE, the source is available for use.

Examples

The following examples show how you can create or update SourceFeed and assign it to a cluster.

Create the source SourceFeed and assign it to the cluster, StreamCluster1:

```
/opt/vertica/packages/kafka/bin/vkconfig source --create --source SourceFeed --cluster StreamCluster1 --partitions 3
```

Update the existing source SourceFeed to use the existing cluster, StreamCluster2:

```
/opt/vertica/packages/kafka/bin/vkconfig source --update --source SourceFeed --new-cluster StreamCluster2
```

Target Utility Options

Use the target utility to configure a Vertica table to receive data from your streaming data application.

Option	Description
<code>--target-schema</code> <i>schema.table_name</i>	The existing Vertica target schema associated with this target.
<code>--new-target-schema</code> <i>schema_name</i>	Changes the Vertica schema associated with this schema to a new, already created schema. Requires: <code>--update</code> option.
<code>--target-table</code> <i>table_name</i>	The name of a Vertica table corresponding to the target.
<code>--new-target-table</code> <i>schema_name</i>	Changes the Vertica target table associated with this schema to a new, already created table. Requires: <code>--update</code> option.

Important: Avoid having columns with NOT NULL restrictions in your target table. The scheduler stops loading data if it encounters a row that has a NULL value it needs to insert into a column with a NOT NULL restriction. If you must have a NOT NULL column, try to filter out all NULL values for that column in the streamed data before it is loaded by the scheduler.

Examples

This example shows how you can create a target from public.streamtarget:

```
/opt/vertica/packages/kafka/bin/vkconfig target --create --target-schema public --target-table streamtarget
```

Load Spec Utility Options

The Load Spec utility enables you to provide parameters for the COPY statement that loads streaming data.

Option	Description
<code>--load-spec <i>spec_name</i></code>	A unique name for this copy load spec.
<code>--filters "<i>filter_name</i>"</code>	A Vertica FILTER chain containing all UDFilters for the COPY statement. For more information on filters, refer to Parsing Custom Formats .
<code>--message-max-bytes <i>max_message_size</i></code>	Specifies the maximum size, in bytes, of a message. Default Value: 1048576
<code>--parser <i>parser_name</i></code>	Identifies a VerticaUDParser to use with a specified target. If you are using a Vertica native parser, parser parameters serve as a COPY statement parameters. Default Value: KafkaParser
<code>--parser-parameters <i>key=value, key=value</i></code>	A list of parameters to provide to the parser.
<code>--new-load-spec</code>	A new, unique name for an existing load spec. Requires the <code>--update</code> parameter
<code>--uds-kv-parameters <i>key=value, key=value</i></code>	A comma separated list of key value pairs for the user-defined source.

Option	Description
<code>--load-method</code> AUTO TRICKLE DIRECT	The COPY load method to use for all loads with this scheduler. See the COPY statement for more information. Default Value: TRICKLE

Examples

These examples show how you can use the Load Spec utility options.

Create the load spec, Streamspec1:

```
/opt/vertica/packages/kafka/bin/vkconfig load-spec --create --load-spec Streamspec1
```

Update the load spec, Streamspec1, to the name Streamspec2, and also update the load method to Direct:

```
/opt/vertica/packages/kafka/bin/vkconfig load-spec --update --load-spec Streamspec1 --new-load-spec Streamspec2 --load-method direct
```

Update the load spec, Filterspec, to use the KafkaInsertLengths filter and a custom decryption filter:

```
/opt/vertica/packages/kafka/bin/vkconfig load-spec --update --load-spec Filterspec --filters "KafkaInsertLengths() DecryptFilter(parameter=Key)"
```

Microbatch Utility Options

A microbatch represents an individual segment of a data load from a Kafka stream. It combines the definitions for your cluster, source, target, and load spec that you create using the other vkconfig options. The scheduler uses all of the information in the microbatch to execute [COPY](#) statements using [KafkaSource](#) function that transfer data from Kafka to Vertica. The result of each microbatch load is stored in the [stream_microbatch_history](#) table.

Option	Description
<code>--microbatch</code> <i>name</i>	A unique, case insensitive name for the microbatch.

Option	Description
<code>--new-microbatch</code> <i>updated_name</i>	The updated name for the microbatch. Requires the <code>--update</code> shared utility option.
<code>--load-spec</code> <i>loadspect_name</i>	The load spec to use while processing this microbatch.
<code>--target-schema</code> <i>schema_name</i>	The existing Vertica target schema associated with this microbatch.
<code>--rejection-schema</code> <i>schema_name</i>	The existing Vertica schema that contains a table for storing rejected messages.
<code>--target-columns</code> <i>column_name, ... column expression</i>	A column expression for the target table. This value can be a list of columns or a complete expression. See the COPY statement COPY Parameters in the core documentation for a description of column expressions.
<code>--rejection-table</code> <i>table_name</i>	The existing Vertica table that stores rejected messages.
<code>--enabled</code> TRUE FALSE	When TRUE, allows the microbatch to execute.
<code>--target-table</code> <i>table_name</i>	The name of a Vertica table corresponding to the target. This table must belong to the target schema.
<code>--add-source</code> <i>source_name</i>	The name of a source to assign to this microbatch. You can use this parameter once per command. You can also use it with <code>--update</code> to add sources to a microbatch. Requires <code>--add-source-cluster</code> .
<code>--add-source-cluster</code> <i>cluster_name</i>	The name of a cluster to assign to this microbatch. You can use this parameter once per command. You can also use it with <code>--update</code> to add sources to a microbatch. You can only add sources from the same cluster to a single microbatch. Requires <code>--add-source</code> .
<code>--remove-source</code> <i>source_name</i>	The name of a source to remove from this microbatch. You can use this parameter once per command. You can also use it with <code>--update</code> to

Option	Description
<i>name</i>	remove multiple sources from a microbatch. Requires <code>--remove-source-cluster</code> .
<code>--remove-source-cluster</code> <i>cluster_name</i>	The name of a cluster to remove from this microbatch. You can use this parameter once per command. Requires <code>--remove-source</code> .
<code>--offset</code> <i>partition_1_offset</i> [, <i>partition_2_offset</i> ,...]	<p>The offset of the message in the source where the microbatch starts its load. If you use this parameter, you must supply an offset value for each partition in the source or each partition you list in the <code>--partition</code> option.</p> <p>You can use this option to skip some messages in the source or reload previously read messages.</p> <div style="background-color: #f0f0f0; padding: 10px; border: 1px solid #ccc;"> <p>Important: You cannot set an offset for a microbatch while the scheduler is running. If you attempt to do so, the <code>vkconfig</code> utility returns an error. Use the <code>shutdown</code> utility to shut the scheduler down before setting an offset for a microbatch.</p> </div>
<code>--partition</code> <i>partition_1</i> [, <i>partition_2</i> ,...]	One or more partitions to which the offsets given in the <code>--offset</code> option apply. If you supply this option, then the offset values given in the <code>--offset</code> option applies to the partitions you specify. Requires the <code>--offset</code> option.
<code>--source</code> <i>source_name</i>	The name of the source to which the offset in the <code>--offset</code> option applies. Required when the microbatch defines more than one source or the <code>--cluster</code> parameter is given. Requires the <code>--offset</code> option.
<code>--cluster</code> <i>cluster_name</i>	The name of the cluster to which the <code>--offset</code> option applies. Only required if the microbatch defines more than one cluster or the <code>--source</code> parameter is supplied. Requires the <code>--offset</code> option.

Examples

This example shows how you can create the microbatch, `mbatch1`. This microbatch identifies the schema, target table, load spec, and source for the microbatch:

```
/opt/vertica/packages/kafka/bin/vkconfig microbatch --create --microbatch mbatch1 \  
--target-schema public \  
--target-table BatchTarget \  
--load-spec Filterspec \  
--add-source SourceFeed \  
--add-source-cluster StreamCluster1
```

Launch Utility Options

Use the Vertica launch utility to assign a name to a scheduler instance.

Option	Description
<code>--enable-ssltrue false</code>	(Optional) Enables SSL authentication between Kafka, Vertica, and the Kafka Scheduler. For more information, refer to Using SSL with Kafka .
<code>--ssl-ca-alias</code>	The user-defined alias of the root certifying authority you are using to authenticate communication between Vertica and Kafka. This parameter is used only when SSL is enabled.
<code>--ssl-key-alias</code>	The user-defined alias of the key/certificate pair you are using to authenticate communication between Vertica and Kafka. This parameter is used only when SSL is enabled.
<code>--ssl-key-password</code>	The password used to create your SSL key. This parameter is used only when SSL is enabled.
<code>--instance-name <i>name</i></code>	(Optional) Allows you to name the process running the scheduler. You can use this command when viewing the <code>scheduler_history</code> table, to find which instance is currently running.

Examples

This example shows how you can name the following scheduler instance. Specify the name as PrimaryScheduler:

```
/opt/vertica/packages/kafka/bin/vkconfig launch --instance-name PrimaryScheduler
```

This example shows how you can launch an instance named SecureScheduler with SSL enabled:

```
/opt/vertica/packages/kafka/bin/vkconfig launch --instance-name SecureScheduler --enable-SSL true  
--ssl-ca-alias authenticcert --ssl-key-alias ourkey --ssl-key-password secret
```

Shutdown Utility Options

Use the shutdown utility to terminate all Vertica schedulers. Run this command before restarting the scheduler.

Note: Restarting the scheduler without terminating existing schedulers can produce unexpected behavior.

Examples

This example shows how you can terminate all Vertica Kafka schedulers:

```
/opt/vertica/packages/kafka/bin/vkconfig shutdown
```

Kafka Function Reference

- [KafkaExport](#)

KafkaExport

Outputs rows that Vertica was unable to send to Kafka. If all of your messages have imported successfully, this function returns zero rows. You can use this function to copy failed messages to a secondary table for evaluation and reprocessing.

Syntax

```
KafkaExport(partitionColumn, keyColumn, valueColumn USING PARAMETERS  
brokers='host', source='sourcename')  
OVER () FROM table
```

Parameters

Argument	Description
<code>partitionColumn</code>	Optional. The target partition for the export. If you do not specify a partition, Vertica uses the default partition. You can use the partition column to send messages to partitions that map to Vertica segments. Specify a value of NULL to skip this parameter.
<code>keyColumn</code>	Optional. The user defined key value associated with the <code>valueColumn</code> . Specify a value of NULL to skip this parameter.
<code>valueColumn</code>	Optional. The message itself. The column must have a data type of VARCHAR. Specify a value of NULL to skip this parameter.
<code>brokers</code>	A list of one or more hosts.
<code>source</code>	The source to which you are exporting.

Examples

```
=> SELECT KafkaExport(partion, messageId, message USING PARAMETERS brokers='KafkaBroker'  
, source='failure_test',  
                    kafka_conf='message.max.bytes=64000')  
   OVER (PARTITION BEST)  
   FROM failure_test;  
partition | key | substr | failure_reason  
-----+-----+-----+-----  
    -123 | key1 | negative partition not allowed | Local: Unknown partition  
   54321 |     | nonexistant partition | Local: Unknown partition  
      0 | normal key1 | normal value1 | Broker: Message size too  
large  
      0 |     | aaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaaa | Broker: Message size too  
large  
      0 | normal key2 | normal value2 | Broker: Message size too  
large
```

Data Streaming Schema Tables

Every time you create a scheduler (`--create`), Vertica creates a schema for that scheduler with the name you specify or the default `stream_config`. Each schema has the following tables:

- [stream_clusters](#)
- [stream_events](#)
- [stream_load_specs](#)
- [stream_microbatch_history](#)
- [stream_microbatch_source_map](#)
- [stream_microbatches](#)
- [stream_scheduler](#)
- [stream_scheduler_history](#)
- [stream_sources](#)
- [stream_targets](#)

Caution: Micro Focus recommends that you do not alter these tables except in consultation with support.

stream_clusters

This table lists clusters and hosts.

Column	Data Type	Description
id	INT	The identification number assigned to the cluster.
cluster	VARCHAR	The name of the cluster.
hosts	VARCHAR	A comma-separated list of hosts associated with the cluster.

Examples

This example shows a cluster and its associated hosts.

```
=> SELECT * FROM stream_config.stream_clusters;
  id | cluster | hosts
-----+-----+-----
2250001 | streamcluster1 | 10.10.10.10:9092,10.10.10.11:9092
(1 rows)
```

stream_events

This table logs micro-batches and other important events from the scheduler in an internal log table.

This table was renamed from kafka_config.kafka_events.

Column	Data Type	Description
event_time	TIMESTAMP	The time the event was logged.
log_level	VARCHAR	The type of event that was logged. Valid Values: <ul style="list-style-type: none">TRACEDEBUGFATALERRORWARNINFO Default value: INFO
frame_start	TIMESTAMP	The time when the frame executed.
frame_end	TIMESTAMP	The time when the frame completed.

Column	Data Type	Description
microbatch	INTEGER	The identification number of the associated microbatch.
message	VARCHAR	A description of the event.
exception	VARCHAR	If this log is in the form of a stack trace, this column lists the exception.

Examples

This example shows typical rows from the `stream_events` table.

```
=> SELECT * FROM stream_config.stream_events;

-[ RECORD 1 ]-+-----
event_time   | 2016-07-17 13:28:35.548-04
log_level    | INFO
frame_start  |
frame_end    |
microbatch   |
message      | New leader registered for schema stream_config. New ID: 0, new Host: 10.20.100.62
              | 004:9092,eng-g9-005:9092), resource pool: kafka_default_pool
exception    |
-[ RECORD 2 ]-+-----
event_time   | 2016-07-17 13:28:45.643-04
log_level    | INFO
frame_start  | 2015-07-17 12:28:45.633
frame_end    | 2015-07-17 13:28:50.701-04
microbatch   |
message      | Generated tuples: test3|2|-2,test3|1|-2,test3|0|-2
exception    |
-[ RECORD 3 ]-+-----
event_time   | 2016-07-17 14:28:50.701-04
log_level    | INFO
frame_start  | 2016-07-17 13:28:45.633
frame_end    | 2016-07-17 14:28:50.701-04
microbatch   |
message      | Total rows inserted: 0
exception    |
```

stream_load_specs

This table describes user-created load specs.

Column	Data Type	Description
id	INT	The identification number assigned to the cluster.
load_spec	VARCHAR	The name of the load spec.
filters	VARCHAR	A comma-separated list of hosts associated with the cluster.
parser	VARCHAR	A VerticaUDParser to use with a specified target. If you are using a Vertica native parser, parser parameters serve as a COPY statement parameters.
parser_parameters	VARCHAR	A list of parameters to provide to the parser.
load_method	VARCHAR	The COPY load method to use for all loads with this scheduler. See the COPY statement for more information.
message_max_bytes	INT	The maximum size, in bytes, of a message.
uds_kv_parameters	VARCHAR	A list of parameters provided to the copy statement.

Examples

This example shows the load specs that you can use with a Vertica instance.

```
SELECT * FROM stream_config.stream_load_specs;
-[ RECORD 1 ]-----+-----
id                | 1
load_spec         | loadspec2
filters           |
parser            | KafkaParser
parser_parameters |
load_method       | direct
message_max_bytes| 1048576
uds_kv_parameters |
-[ RECORD 2 ]-----+-----
id                | 750001
load_spec         | streamspec1
filters           |
parser            | KafkaParser
parser_parameters |
load_method       | TRICKLE
message_max_bytes| 1048576
uds_kv_parameters |
```

stream_microbatch_history

This table contains a history of every microbatch executed within this scheduler configuration.

Column	Data Type	Description
source_name	VARCHAR	The name of the source.
source_cluster	VARCHAR	The name of the source cluster. To query sources, refer to stream_sources .
source_partition	INTEGER	The number of the data streaming partition.
start_offset	INTEGER	The starting offset of the microbatch.
end_offset	INTEGER	The ending offset of the microbatch.
end_reason	VARCHAR	An explanation for why the batch ended. The following are valid end reasons: <ul style="list-style-type: none">• DEADLINE - The batch ran out of time• END_OFFSET - The load reached the ending offset specified in the KafkaSource• END_OF_STREAM - There are no messages available to the scheduler or the eof_timeout has been reached• NETWORK_ERROR - The scheduler could not connect to Kafka• RESET_OFFSET - The start offset was changed using the --update and --offset parameters to the KafkaSource. This state does not occur during normal scheduler operations.• SOURCE_ERROR - The specified Kafka topic does not exist• UNKNOWN - The batch ended for an unknown reason
end_reason_	VARCHAR	If the end reason is a network or source issue, this column

Column	Data Type	Description
message		contains a brief description of the issue.
partition_ bytes	INTEGER	The number of bytes transferred from a source partition to a Vertica target table.
partition_ messages	INTEGER	The number of messages transferred from a source partition to a Vertica target table.
microbatch_id	INTEGER	The Vertica transaction id for the batch session.
microbatch	VARCHAR	The name of the microbatch.
target_schema	VARCHAR	The name of the target schema.
target_table	VARCHAR	The name of the target table.
timeslice	INTERVAL	The amount of time spent in the KafkaSource operator.
batch_start	TIMESTAMP	The time the batch executed.
batch_end	TIMESTAMP	The time the batch completed.
last_batch_ duration	INTERVAL	The length of time required to run the complete COPY statement.
consecutive_ error_count	INTEGER	The number of times a microbatch has encountered an error on an attempt to load. This value increases over multiple attempts.
transaction_id	INTEGER	The identifier for the transaction within the session.
frame_start	TIMESTAMP	The time the frame started. A frame can contain multiple microbatches.
frame_end	TIMESTAMP	The time the frame completed.

Examples

This example shows typical rows from the stream_microbatch_history table.

```
=> SELECT * FROM stream_config.stream_microbatch_history;
```

```
-[ RECORD 1 ]--+-+-----
```

```

source_name      | streamsource1

end_reason_message | Local: All brokers are down

```

stream_microbatch_source_map

This table maps microbatches to the their associated sources.

Column	Data Type	Description
microbatch	INTEGER	The identification number of the microbatch.
source	INTEGER	The identification number of the associated source.

Examples

This example shows typical rows from the `stream_microbatch` table.

```
SELECT * FROM stream_config.stream_microbatch_source_map;
microbatch | source
-----+-----
          1 |      4
          3 |      2
(2 rows)
```

stream_microbatches

This table contains metadata related to microbatches

Column	Data Type	Description
id	INT	The identification number of the microbatch.
microbatch	VARCHAR	The name of the microbatch.
target	INT	The identification number of the target associated with the microbatch.
load_spec	INT	The identification number of the load spec associated with the microbatch.
target_columns	VARCHAR	The table columns associated with the microbatch.
rejection_schema	VARCHAR	The schema that contains the rejection table.
rejection_table	VARCHAR	The table where Verticastores messages that are rejected by the database.
enabled	BOOLEAN	When TRUE, the microbatch is enabled for use.

Examples

This example shows a row from a typical `stream_microbatches` table.

```
SELECT * FROM stream_config.stream_microbatches;
-[ RECORD 1 ]-----
id           | 1
microbatch   | mbatch1
target       | 1
load_spec    | 750001
target_columns |
rejection_schema | public
rejection_table | rejected_messages
enabled      | t
```

stream_scheduler

This table contains metadata related to a single scheduler.

This table was renamed from `kafka_config.kafka_scheduler`.

Column	Data Type	Description
version	VARCHAR	The version of the scheduler.
frame_duration	INTERVAL	The length of time of the frame. The default is 00:00:10.
resource_pool	VARCHAR	The resource pool associated with this scheduler.
config_refresh	INTERVAL	The interval of time that the scheduler runs before applying any changes to its metadata, such as, changes made using the <code>--update</code> option. For more information, refer to <code>--config-refresh</code> in Scheduler Utility Options .
new_source_policy	VARCHAR	When during the frame that the source runs. Set this value with the <code>--new-source-policy</code> in Source Utility

Column	Data Type	Description
		<p>Options.</p> <p>Valid Values:</p> <ul style="list-style-type: none"> FAIR: Takes the average length of time from the previous batches and schedules itself appropriately. START: Runs all new sources at the beginning of the frame. In this case, Vertica gives the minimal amount of time to run. END: Runs all new sources starting at the end of the frame. In this case, Vertica gives the maximum amount of time to run. <p>Default Value: FAIR</p>
eof_timeout_ms	INT	<p>The maximum amount of time the scheduler waits for data from the source before ending the batch.</p> <p>Default Value: 1000</p>
pushback_policy	VARCHAR	<p>How Vertica handles delays for microbatches that continually fail.</p> <p>Valid Values:</p> <ul style="list-style-type: none"> FLAT LINEAR EXPONENTIAL <p>Default Value: LINEAR</p>
pushback_max_count	INT	<p>The maximum number of times a</p>

Column	Data Type	Description
		microbatch can fail before Vertica terminates it.
auto_sync	BOOLEAN	When TRUE, the scheduler automatically synchronizes source information with host clusters. For more information, refer to Data Streaming Job Scheduler . Default Value: TRUE

Examples

This example shows a typical row in the stream_scheduler table.

```
SELECT * FROM stream_config.stream_scheduler;
-[ RECORD 1 ]-----+-----
version          | v8.0.0
frame_duration   | 00:00:10
resource_pool    | kafka_default_pool
config_refresh   | 00:05
new_source_policy | FAIR
eof_timeout_ms   | 10000
pushback_policy  | LINEAR
pushback_max_count | 5
auto_sync        | t
```

stream_scheduler_history

This table shows the history of launched scheduler instances.

This table was renamed from kafka_config.kafka_scheduler_history.

Column	Data Type	Description
elected_leader_time	TIMESTAMP	The time when this instance took began scheduling operations.
host	VARCHAR	The host name of the machine running the scheduler instance.

Column	Data Type	Description
launcher	VARCHAR	The name of the currently active scheduler instance. Default Value: NULL
scheduler_id	INT	The identification number of the scheduler.
version	VARCHAR	The version of the scheduler.

Examples

This example shows typical rows from the stream_scheduler_history table.

```

SELECT * FROM stream_config.stream_scheduler_history;
  elected_leader_time |      host      | launcher          | scheduler_id | version
-----|-----|-----|-----|-----
2016-07-26 13:19:42.692 | 10.20.100.62 |                  | 0 | v8.0.0
2016-07-26 13:54:37.715 | 10.20.100.62 |                  | 1 | v8.0.0
2016-07-26 13:56:06.785 | 10.20.100.62 |                  | 2 | v8.0.0
2016-07-26 13:56:56.033 | 10.20.100.62 | SchedulerInstance | 3 | v8.0.0
2016-07-26 15:51:20.513 | 10.20.100.62 | SchedulerInstance | 4 | v8.0.0
2016-07-26 15:51:35.111 | 10.20.100.62 | SchedulerInstance | 5 | v8.0.0
(6 rows)

```

stream_sources

This table contains metadata related to data streaming sources.

This table was formerly named kafka_config.kafka_scheduler.

Column	Data Type	Description
id	INTEGER	The identification number of the source
source	VARCHAR	The name of the source.
cluster	INTEGER	The identification number of the cluster associated with the source.
partitions	INTEGER	The number of partitions in the source.

Column	Data Type	Description
enabled	BOOLEAN	When TRUE, the source is enabled for use.

Examples

This example shows a typical row from the stream_sources table.

```
select * from stream_config.stream_sources;
-[ RECORD 1 ]-----
id          | 1
source      | SourceFeed1
cluster     | 1
partitions  | 1
enabled     | t
-[ RECORD 2 ]-----
id          | 250001
source      | SourceFeed2
cluster     | 1
partitions  | 1
enabled     | t
```

stream_targets

This table contains the metadata for all Vertica target tables.

The table was formerly named kafka_config.kafka_targets.

Column	Data Type	Description
id	INTEGER	The identification number of the target table
target_schema	VARCHAR	The name of the schema for the target table.
target_table	VARCHAR	The name of the target table.

Examples

This example shows typical rows from the stream_tables table.

```
=> SELECT * FROM stream_config.stream_targets;
-[ RECORD 1 ]-----+-----
id                | 1
target_schema     | public
target_table      | stream_flex1
-[ RECORD 2 ]-----+-----
id                | 2
target_schema     | public
target_table      | stream_flex2
```

Integrating with Apache Spark

Welcome to the Micro Focus Vertica Connector for Apache Spark Guide.

Vertica Connector for Apache Spark is a fast parallel connector that transfers data between the Vertica Analytics Platform and Apache Spark. This feature lets you use Spark to pre-process data for Vertica and to use Vertica data in your Spark application.

Apache Spark is an open-source, general-purpose cluster-computing framework. It evolved as a faster, multi-stage, in-memory alternative to the two stage, disk-based Map Reduce framework offered by Hadoop. The Spark framework is based on *Resilient Distributed Datasets* (RDDs), which are logical collections of data partitioned across machines. Spark is typically used in upstream workloads to process data before loading it in Vertica for interactive analytics. It can also be used downstream of Vertica, where data pre-processed by Vertica is then moved into Spark for further transformation.

Using the Micro Focus Vertica Connector for Apache Spark, you can:

- Move large volumes of data from Spark DataFrames to Vertica tables; the connector allows you to write Spark DataFrames to Vertica tables.
- Move data from Vertica to Spark RDDs or DataFrames for use with Python, R, Scala and Java. The connector efficiently pushes down column selection and predicate filtering to Vertica before loading the data.

Audience

This book is intended for anyone who wants to transfer data between a Vertica database and an Apache Spark cluster.

Prerequisites and Compatibility

This document assumes that you have installed and configured Vertica as described in [Installing Vertica](#) and the [Configuring the Database](#) section of the Administrator's Guide. You must also have installed your Apache Spark clusters.

To save data from Spark to Vertica, you must have an HDFS cluster for an intermediate staging location. Your Vertica database must be configured to read data from this HDFS cluster. See [Reading Directly from HDFS](#) in [Integrating with Apache Hadoop](#) for more information.

For details on installing and using Apache Spark and Apache Hadoop, see the [Apache Spark web site](#), the [Apache Hadoop website](#), or your Hadoop vendor's installation documentation.

For supported versions of Apache Spark and Apache Hadoop see the following sections in the [Supported Platforms guide](#):

- [Vertica Integration for Apache Spark](#)
- [Vertica Integrations for Hadoop](#)

The startup messages contain the version numbers of both Spark and Scala (shown in bold in the previous example for clarity).

Deploying the Vertica Connector for Apache Spark

Once you have downloaded the connector and JDBC library JAR files, you can deploy them to your Spark cluster in two ways:

- Include the connector and Vertica JDBC JAR files using the "--jars" option when invoking spark-submit or spark-shell.
- Deploy the connector to a Spark cluster so that all Spark applications have access across all nodes.

Copying the Connector for Use with Spark Submit or Spark Shell

1. Log on as the Spark user on any Spark machine.
2. Copy both the Vertica Spark Connector and Vertica JDBC Driver JAR files from the package to your local Spark directory.
3. Then, run the connector in any of the following ways (replace the version number in the jar names with your version number):
 - Run a Spark Application using spark-submit (<http://spark.apache.org/docs/latest/submitting-applications.html#launching-applications-with-spark-submit>). You must run the command on the node with the Vertica JAR files.

```
spark-submit --jars vertica-8.1.0_spark2.0_scala2.11.jar,vertica-jdbc-8.1.0-0.jar other options SparkApplication.jar
```

Note: Do not include a space before or after the comma in the --jars argument.

- Use the Interactive spark-shell (<http://spark.apache.org/docs/latest/programming-guide.html#using-the-shell>). You must run the command on the node with the Vertica JAR files:

```
spark-shell --jars vertica-8.1.0_spark2.0_scala2.11.jar,vertica-jdbc-8.1.0-0.jar other options
```

Note: The version numbers in the JAR file names will vary depending on your version of Vertica, Spark, and Scala.

Deploying the Connector to a Spark Cluster

You can optionally deploy the JAR files to a Spark cluster. This approach gives all applications (such as shell and submit) access; it does not require specifying them on the command line.

To deploy to the Spark cluster:

1. Copy the files to a common path on all Spark machines.
2. Add the path for the connector and JDBC driver to your `conf/spark-defaults.conf`, and restart the Spark Master. For example, modify the `spark.jars` line by adding the connector and JDBC JARS as follows (replace paths and version numbers with your values):

```
spark.jars /JAR_file_Path/vertica-8.1.0_spark2.0_scala2.11.jar,/JAR_file_Path/vertica-jdbc-8.1.0-0.jar
```

Saving an Apache Spark DataFrame to a Vertica Table

The Vertica Connector for Apache Spark copies data partitions distributed across multiple Spark worker-nodes into a temporary location in HDFS. Vertica then reads the data from HDFS. These data transfers use parallel reads and writes, letting the connector efficiently load large volumes of data from Spark to Vertica.

Save Options

When writing Spark DataFrames to Vertica, you specify a Vertica target table. You also set how the data is saved using the DataFrame [SaveMode](#). The valid values for the SaveMode are:

- **SaveMode.Overwrite** overwrites or create new table.

Note: The existing table is dropped whether the save succeeds or not, except when the connector is asked to load a DataFrame that contains zero rows.

- **SaveMode.Append** appends data to an existing table or creates the table if it does not exist.
- **SaveMode.ErrorIfExists** creates a new table if the table does not exist, otherwise returns an error.
- **SaveMode.Ignore** creates a new table if the table does not exist, otherwise it does not save the data and does not return an error.

The `save()` operation never results in a partial or duplicate save. The connector either saves the DataFrame in its entirety to the target table successfully or it aborts the save. In case of failures, to avoid leaving the target table in an inconsistent state, the connector:

1. Saves the data to HDFS as an intermediate staging location
2. Safely copies it into the actual target table in Vertica

Rejected Rows

For bulk loads, the connector API provides user control to specify a tolerance for rejected rows. You can specify the user tolerance as a parameter (see [Parameters](#) in [Saving Spark Data to Vertica Using the DefaultSource API](#)). If the number of rejected rows falls within the tolerance level, the save completes successfully. Otherwise, the connector aborts the save and reports an error.

Job Status

The connector creates a Vertica table, `S2V_JOB_STATUS_USER_$USERNAME$`, to report the status of each job. When the save to Vertica starts, the connector writes the unique `job_id` to the Spark log. After the Spark job is started, users can consult this table for the job status based on the `job_id`. The `S2V_JOB_STATUS_USER_$USERNAME$` has the following columns:

- `target_table_schema`
- `target_table_name`
- `save_mode`
- `job_name`
- `start_time`
- `all_done`
- `success`
- `percent_failed_rows`

The table indicates the start time, unique job name, date, percentage of rows that failed, and final outcome of the save job (success=T/F). The column `all_done` indicates the Spark job finished without errors and the column `success` indicates the data was saved to the Vertica table (rejected rows must fall within specified tolerance).

Saving Spark Data to Vertica Using the DefaultSource API

The Vertica Connector for Apache Spark provides the `com.vertica.spark.datasource.DefaultSource` API to simplify writing data from a Spark DataFrame to a Vertica table using the Spark `df.write.format()` method. The DefaultSource API provides generic key-value options for configuring the database connection and tuning parameters as well as other options.

Requirements

The following requirements apply to using the connector to save Spark data to Vertica.

- When you append to an existing Vertica table (using **SaveMode.Append**), your DataFrame must have the same column types, column order, and number of columns as the Vertica table.
- The specified Vertica username must have CREATE privileges on the Vertica schema. The connector defaults to "public" schema, but any schema name can be provided as an option by using the "dbschema" optional argument.
- A Spark SaveMode must to be specified (Append, Overwrite, Ignore, ErrorIfExists). See [Saving an Apache Spark DataFrame to a Vertica Table](https://spark.apache.org/docs/1.6.2/api/java/org/apache/spark/sql/SaveMode.html) and <https://spark.apache.org/docs/1.6.2/api/java/org/apache/spark/sql/SaveMode.html>.

Limitations

The following limitations apply to using the connector to save Spark data to Vertica.

- **Supported Data Types**—The Spark DataFrame cannot have complex types such as Maps, Structs, and Arrays. Vertica currently supports all other Spark data types. The connector cannot save a DataFrame that contains any of these types.
- **Target Table Limitations**—The Vertica target table specified cannot be a view or a temporary table.

- **Null Values in Spark and Vertica**—Spark's long type is converted to Vertica's INT type when data moves from Spark to Vertica. Vertica uses the value -2^{63} (-9223372036854775808) to represent a NULL value. Spark does not treat this value in any special way. If you save -2^{63} from Spark to Vertica then it is stored as NULL in Vertica.
- **SQL Strings**—Length of Strings. Currently the connector converts all Spark SQL Strings to VARCHAR(strlen) for Vertica. The 'strlen' parameter is a user option that defaults to 1024. If strlen is set to a value greater than 65000, Spark SQL Strings are instead converted to LONG VARCHAR(strlen). Values in the range 1 to 32,000,000 are valid.

When using SaveMode.Append, the existing Vertica table should have the corresponding column types for Spark SQL Strings declared as either VARCHAR or LONG VARCHAR.

Spark SQL Strings longer than strlen are always truncated when saving to Vertica.

- **Float Values**—Float Values Represented Differently. Because float values are approximations, the value of a float can be different when it is moved from Spark to Vertica. If you require more precision, then use a more precise data type in Spark, such as double or decimal.
- **Gregorian/Julian Calendar Issues**—Inconsistent dates before the year 1583. The ORC file writer used to stage the data to in HDFS converts dates before 1583 from the Gregorian calendar to the Julian calendar. However Vertica does not perform this conversion. If your data in Spark contains dates before 1583, then the values in Spark and the corresponding values in Vertica can differ by up to 10 days. This difference applies to both DATE and TIMESTAMP values.
- **Wrong results for Decimal Type.** If your version of Vertica is prior to 7.2 SP3, then decimal numbers are incorrectly loaded from Spark to Vertica. Upgrade to a newer version of Vertica to resolve this issue.
- **Different Jobs Writing to the Same Table in Overwrite Mode cause error:**—ERROR: java.sql.SQLException: [Vertica][VJDBC](3007) ERROR: DDL statement interfered with this statement. If you have different jobs writing to the same table and are using Overwrite mode then errors can occur. For example, Job 1 starts and begins writing to the Vertica table. Then Job 2 begins and is set to write to the same table. Because the mode is Overwrite, it drops the table to which Job 1 is writing, causing an error. Do not use different jobs to write to the same table when using overwrite mode.
- **Files not cleaned up if process interrupted.**—The files written on by Spark to HDFS are normally cleaned up when the job completes. However, if something interrupts the process

(such as a network failure), then files may be left behind and you should manually cleanup the HDFS directory. The HDFS directory is the one provided in the `hdfs_url` path, and the specific subdirectory is `S2V_jobxyz` as reported by the connector.

- **Error if the DataFrame has zero rows**—The connector returns an error message asking you to check whether the DataFrame is empty. This error occurs before the connector begins loading data into Vertica. The data in the targeted Vertica table is not altered, even if mode was set to `SaveMode.Overwrite` (which would normally delete the table).

Parameters

To save your Spark DataFrame to Vertica, you must specify the following required parameters as options to `sqlContext.createDataFrame(...).format("com.vertica.spark.datasource.DefaultSource").options(...)`:

Parameter	Description
<code>table</code>	The name of the target Vertica table to save your Spark DataFrame.
<code>db</code>	The name of the Vertica Database
<code>user</code>	The name of the Vertica user. This user must have CREATE and INSERT privileges in the Vertica schema. The schema defaults to “public”, but may be changed using the “dbschema” optional tuning parameter.
<code>password</code>	The password for the Vertica user.
<code>host</code>	The hostname of a Vertica node. This value is used to make the initial connection to Vertica and look up all the other Vertica node IP addresses. You can provide a specific IP address or a resolvable name such as <code>myhostname.com</code> .
<code>hdfs_url</code>	<p>The fully-qualified path to a directory in HDFS that will be used as a data staging area. For example, <code>hdfs://myhost:8020/data/test</code>.</p> <p>The connector first saves the DataFrame in its entirety to this location before loading into Vertica. The data is saved in ORC format, and the files are saved in a directory specific to each job. This directory is then deleted when the job completes.</p> <p>Note that you need additional configuration changes for to use HDFS. You must first configure all nodes to use HDFS. See Configuring the hdfs Scheme.</p>

Parameter	Description
	<p>You can optionally use the webhdfs protocol instead. See HDFS and WebHDFS.</p> <p>Note: You must provide an HDFS URL even if you intend to use webhdfs. You can use a dummy URL.</p>

In addition to the required parameters, you can optionally specify the following parameters as options to `sqlContext.createDataFrame(...).format("com.vertica.spark.datasource.DefaultSource").options(...)`.

Parameter	Description
<code>dbschema</code>	The schema space for the Vertica table. Default Value: <code>public</code>
<code>port</code>	The Vertica Port. Default value: 5433
<code>failed_rows_percent_tolerance</code>	The tolerance level for failed rows, as a percentage. For example, to specify that the job fail if greater than 10% of the rows are rejected, specify this value as 0.10 for 10% tolerance. Default Value: 0.00
<code>strlen</code>	The string length. Use this option to increase (or decrease) the default length when saving Spark StringType to Vertica VARCHAR type. Default Value: 1024
<code>web_hdfs_url</code>	The fully-qualified path to a directory in HDFS that will be used by Vertica to retrieve the data. For example, <code>webhdfs://myserver:50070/data/test</code> . You must use this option (in addition to "hdfs_url") if the Vertica nodes are not configured for HDFS access. See HDFS and WebHDFS . below.

HDFS and WebHDFS

The connector transfers data from Spark to an HDFS directory before moving it to Vertica. Vertica can access data in the HDFS directory either directly using the `hdfs` scheme, or through the web-based `webhdfs` scheme. For greater performance and reliability, Vertica should use direct HDFS access whenever possible.

You must configure your Vertica cluster before it can directly access data stored in HDFS. See [Configuring the hdfs Scheme](#) in the [Integrating with Apache Hadoop](#).

By default, the connector uses the `hdfs` protocol when possible. It falls back to the `webhdfs` protocol in several cases:

- If you do not have your nodes configured for direct HDFS access.
- If the data stored in the HDFS directory is encrypted. The library that Vertica uses to read directly from HDFS cannot decrypt this data. The `webhdfs` scheme transparently decrypts the data for Vertica.

For Vertica to fall back to `webhdfs`, you must verify that `webhdfs.enabled` is set to `true` on your HDFS cluster.

Quick Start with Code Example

You can use the `spark-shell` and some brief Scala code to verify that the connector can write data from Spark to Vertica.

1. Start the `spark-shell` and include both the Vertica JDBC Driver and the Vertica Spark Connector JAR files in the `jars` argument. Then, specify any other Spark options you normally use:

```
spark-shell --jars vertica-8.1.0_spark2.0_scala2.11.jar,vertica-jdbc-8.1.0-0.jar other options
```

2. The following code creates a `DataFrame` in Spark and saves it to a new Vertica table using the connector:
 - a. Modify the `host`, `db`, `user`, `password`, and `table` settings in the following example to match your Vertica instance.
 - b. Paste the following code into your Spark shell.

```
// S2V_basic.scala
import org.apache.spark.sql.types._
import org.apache.spark.sql.{DataFrame, Row, SQLContext, SaveMode}
import com.vertica.spark._

// Create a sample DataFrame and save it to Vertica
val rows = sc.parallelize(Array(
  Row(1,"hello", true),
  Row(2,"goodbye", false)
))

val schema = StructType(Array(
  StructField("id",IntegerType, false),
  StructField("message",StringType,true),
  StructField("still_here",BooleanType,true)
```

```
))

// Note: Spark's API changed between version 1.6 and 2.0. In version 1.6
// you use sqlContext to create a DataFrame. In 2.0, you use the spark object.
// val df = sqlContext.createDataFrame(rows, schema) // Spark 1.6
val df = spark.createDataFrame(rows, schema) // Spark 2.0

// View the sample data and schema
df.show
df.schema

// Setup the user options, defaults are shown where applicable for optional values.
// Replace the values in italics with the settings for your Vertica instance.
val opts: Map[String, String] = Map(
  "table" -> "VerticaTableName",
  "db" -> "VerticaDatabaseName",
  "user" -> "VerticaDatabaseUser",
  "password" -> "VerticaDatabasePassword",
  "host" -> "VerticaHostName",
  "hdfs_url" -> "hdfs://HDFSNameNode:9000/user/hduser/someDirectory",
  "web_hdfs_url" -> "webhdfs://HDFSNameNode:50070/user/hduser/someDirectory"
  // "failed_rows_percent_tolerance" -> "0.00" // OPTIONAL (default val shown)
  // "dbschema" -> "public" // OPTIONAL (default val shown)
  // "port" -> "5433" // OPTIONAL (default val shown)
  // "strlen" -> "1024" // OPTIONAL (default val shown)
)

// SaveMode can be either Overwrite, Append, ErrorIfExists, Ignore
val mode = SaveMode.Overwrite

// save the DataFrame via Spark's Datasource API
df.write.format("com.vertica.spark.datasource.DefaultSource").options(opts).mode(mode).save
()
```

Loading Vertica Data into a Spark DataFrame or RDD

The Vertica Connector for Apache Spark includes APIs to simplify loading Vertica table data efficiently with an optimized parallel data-reader:

- `com.vertica.spark.datasource.DefaultSource` — The data source API, which is used for writing to Vertica and is also optimized for loading data into a DataFrame.
- RDD API `com.vertica.spark.rdd.VerticaRDD` — This API simplifies creating an RDD object based on a Vertica table or view.

Typically, Vertica tables are segmented across multiple nodes. Using the Spark connector, you invoke a parallel data reader to efficiently read data from Vertica by minimizing data movement between Vertica nodes. The DataFrame reader supports pushing column and row filtering to Vertica to avoid transferring large volumes of Vertica data into the Spark in-memory data structures.

Important: For the best possible performance, segment your Vertica table by hash on one or more attributes that return integer values. Hewlett Packard Enterprise does not recommend segmenting by a custom expression, because doing so can result in lower performance than segmenting by hash. See [Hash Segmentation Clause](#) for more details. An example of creating a table segmented by hash:

```
create table example(a integer, b integer) segmented by hash(a) all nodes;
```

Loading Vertica Table Segments into the Spark DataFrames and RDD Partitions

All Spark RDDs and DataFrames require you to define the number of partitions. You can define an arbitrary number of partitions. The Vertica Spark connector library automatically generates the hash-intervals for each partition and intervals. When you segment the table by a proper hash expression on one or more of its columns, these intervals minimize cross-node data shuffling (*w*) inside Vertica and data skew.

No cross-node data shuffling occurs inside Vertica when both of the following conditions exist:

- The Vertica cluster has N nodes.
- The number of the Spark partitions is $P * N$ (P is an integer greater than 0).

Therefore, you can use the full network throughput for data transfer, achieving the best performance. The following figure shows 8 Spark partitions defined over 4 Vertica segmentations.

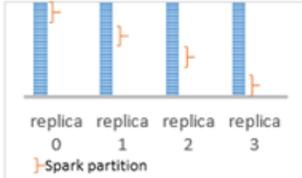

The next figure shows another example where the number of Spark partitions is smaller (two) than the number of Vertica segmentations (four).

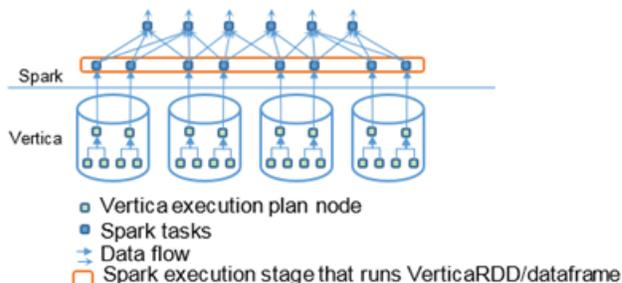

According to Vertica benchmark tests, a setting of $P=4$ achieves the best loading performance. For example, when Vertica has 4 nodes, the number of Spark partitions recommended is 16 ($P = 4, Nodes = 4, P * N = 16$ partitions).

During Spark job execution, each Spark partition executes inside a task. Each task launches a JDBC connection to a Vertica node. This connection contacts the Vertica node that stores the segment containing the data of the Spark partition. The Spark task then issues a query to the Vertica node and fetches the query result into a VerticaRDD/DataFrame.

For an unsegmented Vertica table, the connector replicates the table onto multiple Vertica nodes. The Spark partition is defined as a range on the sorted columns of the table. Spark tasks send the queries to different replicas for load-balancing. The next figure shows Spark partitions defined over an unsegmented table.

The following figure illustrates the runtime behavior of the Vertica to Spark connector. Spark tasks containing VerticaRDD/DataFrame partitions fetch data from Vertica through JDBC connections. Those queries that are used to fetch data are based on the computed ranges of hash values.

Spark Numeric Value Limitation

Both Vertica and Spark support variable-precision NUMERIC values. Vertica's **NUMERIC** values support more digits of precision (up to 1024) than Spark does (38 digits). If you attempt to copy a Vertica table to Spark that has a NUMERIC column with more than 38 digits of precision, the `VerticaDataSourceRDD` class throws an error similar to the following:

```
java.lang.IllegalArgumentException: requirement failed: Decimal precision 41 exceeds max precision 38
    at scala.Predef$.require(Predef.scala:224)
    at org.apache.spark.sql.types.Decimal.set(Decimal.scala:113)
    at org.apache.spark.sql.types.Decimal$.apply(Decimal.scala:426)
    at com.vertica.spark.datasource.VerticaDataSourceRDD$.anon$.getNext(VerticaRDD.scala:382)
    . . .
```

Loading Vertica Data into a Spark DataFrame Using the Vertica Data Source API

The Vertica Connector for Apache Spark data source API supports both parallel write and read operations. The following code sample illustrates how you can create an in-memory DataFrame by invoking `SQLContext.read` function, using Vertica's `com.vertica.spark.datasource.DefaultSource` formatter.

Parameters

To connect to Vertica, you must specify the following parameters for the options in `sqlContext.read.format`

```
("com.vertica.spark.datasource.DefaultSource").options(...).
```

Parameter	Description
table	The name of the target Vertica table or view to save your Spark DataFrame. Note that the Vertica table must be segmented by hash or by an expression that returns non-negative integer values. Also, if the Vertica table is an external table, the underlying file(s) on which the external table is based must be accessible on all Vertica nodes.
db	The name of the Vertica Database
user	The name of the Vertica user. This user must have CREATE and INSERT privileges in the Vertica schema. The schema defaults to “public”, but may be changed using the dbschema optional parameter.
password	The password for the Vertica user.
host	The hostname of a Vertica node. This value is used to make the initial connection to Vertica and look up all the other Vertica node IPs. You can provide a specific IP address or resolvable name such as myhostname.com.
numPartitions	Optional. The number of Spark partitions for the load from the Vertica job, each partition creates a JDBC connection. Default Value: 16.
dbschema	Optional. The schema space for the Vertica table. Default value: public.
port	Optional. The Vertica Port. Default value: 5433

Example: Load Data into a DataFrame

The following example demonstrates reading the content of a Vertica table named test into a DataFrame.

```
import org.apache.spark.SparkContext
import org.apache.spark.SparkContext._
import org.apache.spark.sql._
import org.apache.spark.SparkConf

// Note: the following is deprecated in Spark 2.0. It will warn you to use
// SparkSession instead.
val sqlContext = new SQLContext(sc)

val table = "test"
val db = "myDB"
```

```
val user = "myUser"
val password = "myPassword"
val host = "myVerticaHost"
val part = "12";

val opt = Map("host" -> host, "table" -> table, "db" -> db, "numPartitions" -> part, "user" -> user,
"password" -> password)

val df = sqlContext.read.format("com.vertica.spark.datasource.DefaultSource").options(opt).load()
```

Column Selection and Filter Push Down

Column selections and row filters applied on the DataFrame are pushed down into Vertica. Refer to the Spark SQL API for more details about applying column selections and row filters. The following example illustrates how you can load a column containing filtered rows as a DataFrame:

```
val c = df.select("a").filter("a > 5").count
```

Note: When filtering it is important to specify the correct type. For example, single-quoted values are treated as strings, so if you wrote the above filter code as `filter("a > '5'")` then the filter is not pushed down, because the target column is an int and the value '5' when single-quoted is treated as a string.

Additionally, when using other types such as dates, cast the value as a date type, such as: `filter("c1 >= cast('2010-1-2' as date)` rather than `filter("c1 >= '2010-1-2')`. The latter example does not push down.

Additional examples of valid filters:

- `df.filter("id<=3").groupBy("id").sum("id").show`
- `df.filter($"c".like("str%")).show` // has to be varchar type to be pushed down
- `df.filter($"c".rlike("str")).show` // has to be varchar type to be pushed down
- `df.filter($"id".isin(3,5)).show`

Considerations When Using the Spark DataFrame Filter Method with Vertica

Be aware of the following considerations when using the DataFrame's filter method when loading data from Vertica:

- Vertica supports the case insensitive terms “inf” and “infinity” to refer to INFINITY in SQL queries. However, when filtering using Spark’s filter method you must instead use the term (case sensitive) “Infinity”.
- When filtering on Boolean values, do not use "is true/false" or "is not true/false" instead, cast the value as a Boolean, or use the equals operator, for example:
 - `df.filter("c = 1").show`
 - `df.filter("c = True").show`
 - `df.filter("c = False").show`

Example: Creating a DataFrame Using the Vertica Data Source

Use the following example to learn how to create a Spark DataFrame from a Vertica table:

1. Create a sample table in Vertica:

```
=> CREATE TABLE test (a int, b int, c int, d varchar);
=> INSERT INTO test VALUES (1, 3, 5, 'odds');
=> INSERT INTO test VALUES (10, 14, 8, 'evens');
=> INSERT INTO test VALUES (11, 13, 19, 'odds');
=> COMMIT;
```

2. Modify the database connection details (host, db, table, user, and password) in the code below with your Vertica connection details.

```
import org.apache.spark.sql.SQLContext
import org.apache.spark.SparkConf
import org.apache.spark.SparkContext

val conf = new SparkConf().setAppName("vertica-spark-connector-testing").setMaster("local[1]")
val sc = new SparkContext(conf)
```

```
val sqlContext = new SQLContext(sc)

val host = "VerticaHost"
val db = "VerticaDB"
val table = "VerticaTable"
val user = "VerticaUser"
val password = "VerticaPassword"
val part = "12";

val opt = Map("host" -> host, "table" -> table, "db" -> db, "numPartitions" -> part, "user" ->
user, "password" -> password)

val df = sqlContext.read.format ("com.vertica.spark.datasource.DefaultSource").options(opt).load
()

val c = df.select("a").filter("a > 5").count
println(c)
sc.stop();
```

3. Run the example code in a Spark shell. Start the shell, then paste in your modified code.

Loading Vertica Data into a Spark RDD Using the Vertica RDD API

Use the Vertica RDD API to load Vertica table data into a Spark RDD. You create a `VerticaRDD` object either by initiating it or by calling one of the multiple `RDD.create` methods available. The following example uses `VerticaRDD.create` to create an RDD from Vertica data. In this example, the parameters of `create()` are:

Parameter	Description
hostname	A Vertica node host name
port	Vertica port number. The default value is 5433.
prop	A property object that include user name and password
table	Vertica table name, including the schema name, such as, "schema_name.table_name".
dbname	Vertica database name
col	The column names of the Vertica table that will be loaded into Spark. An empty col array means all columns.

Parameter	Description
numPartitions	The number of Spark partitions for the resulting VerticaRDD
mapRow	<p>A function used to convert one row of JDBC results into the element data type T of VerticaRDD. The generated VerticaRDD has the type VerticaRDD[T].</p> <p>For example:</p> <pre>val extractValues = (r: ResultSet) => { (r.getInt(1), r.getInt(2)) }</pre> <p>This function converts a tuple that contains two integers—for example, (101, 102), into an array of objects. Refer to the Spark JDBC RDD for more details about this parameter.</p> <p>Note: This function must be serializable by Spark.</p>

RDD Create Methods

The `com.vertica.spark.rdd.VerticaRDD` API has three different create methods that you can use to create a VerticaRDD object:

- `create(sc, connect, table, columns, numPartitions, mapRow)`
- `create(sc, connect, table, columns, numPartition, ipMap, mapRow)`
- `create(sc, host, port: Int = 5433, db, properties, table, columns, numPartitions, mapRow)`

The parameters for the Create methods:

Parameter	Description
sc	Spark Context object.
connect	A connection object that contains a function that returns an open JDBC Connection.
table	A string value for the database table name
columns	An <code>Array[String]</code> that contains the columns of the database table

Parameter	Description
	that will be loaded. If an empty array, this RDD loads all columns.
numPartitions	An integer value specifying the number of partitions for the VerticaRDD.
ipMap	<p>A Map [String, String] containing the optional map from private IP addresses to public IP addresses for all Vertica nodes. This map is used only when Vertica is installed on private IP addresses but is listening on both private and public IP addresses.</p> <p>You can also update each Vertica node's EXPORT_ADDRESS instead of providing the ipMap parameter if Vertica is running on both private and public IP addresses.</p> <p>When a database is installed, the export_address and node_address in the system NODES table are set to the same value. If you installed Vertica on a private address, you must set the export_address to a public address for each node.</p> <p>See Identify the Database or Nodes Used for Import/Export in the Administrator's Guide.</p>
mapRow	A function from a ResultSet to a single row of the upi result types you want. This function should call only getInt, getString, etc; the RDD takes care of calling next. The default maps a ResultSet to an array of Object.
host	A string containing the host name (or IP address) of a Vertica node, that can be used to connect to Vertica.
port	An integer value specifying the number for Vertica connection. Default Value: 5433
properties	Properties object for JDBC connection properties, such as user, password.

Example: Loading Vertica Table Data into a VerticaRDD

This section contains complete example code used to create a VerticaRDD from a Vertica table, test whose definition is:

```
create table test (a int, b int);
```

This program creates `VerticaRDD[(Int, Int)]` and calls `count` that returns the number of rows of table, `test`.

```
// V2S_rdd.scala
import com.vertica.spark.rdd.VerticaRDD
import java.util.Properties
import java.sql.ResultSet
import org.apache.spark.SparkConf
import org.apache.spark.SparkContext

val extractValues = (r: ResultSet) => {
  (r.getInt(1), r.getInt(2))
}

val conf = new SparkConf().setAppName("vertica-spark-connector-testing").setMaster("local[1]")
//val sc = new SparkContext(conf) // uncomment if not used in spark shell

val host = "VerticaHost"
val port = 5433
val db = "VerticaDB"
val prop = new Properties
prop.put("user", "VerticaUserName")
prop.put("password", "VerticaPassword")
val table = "test"
val cols = Array[String]()
val part = 12;
val data = VerticaRDD.create(sc, host, port, db, prop, table, cols, numPartitions = part, mapRow =
extractValues)
val c = data.count
println("count:" + c)
```

Vertica Pulse

Welcome to the Vertica Pulse Guide. This book describes how to use Vertica Pulse.

Audience

This book is intended for anyone who wants to use the sentiment analysis features in Vertica.

Prerequisites

This document assumes that you have installed and configured Vertica as described in [Installing Vertica](#) and the [Configuring the Database](#) section of the [Administrator's Guide](#).

Additionally, you must install a compatible Java JRE or JDK on all nodes in the cluster and configure Vertica to use Java for Java UDxs.

Please see the [Vertica product documentation](#) to learn more.

Pulse Virtual Machine Quick Start

These Quick Start instructions detail the minimal steps for installing and using Pulse with the Vertica Virtual Machine Image. Consult the complete documentation for detailed steps on installing Pulse on your own platform.

Downloading and Installing Pulse

1. Go to <http://my.vertica.com/> and sign in. Then, click the **Download** tab.
2. Scroll down to the section "Download Vertica 7.1 Virtual Machines" and click the download link for your VM environment. These instructions assume you are installing the VMDK version - *VMWare Server 2.0 and Workstation 7.0*.
3. After the download completes, unzip the file.
4. Double-click the .vmx file in `vmsrvr_64/Vertica 7.1.x x64` for VMware. The VM starts in your VMWare application.
5. You are automatically logged in as `dbadmin`. However, the password for the user (and root) is 'password'.
6. In the VM, select **Applications > Accessories > Terminal** to open a terminal.
7. In the terminal, type `admintools` to start the administration tools.
8. You are prompted for a license when `admintools` starts for the first time. To use the community edition license, simply click OK. You are then prompted to accept the EULA. Accept the EULA then exit `admintools`.
9. As `dbadmin`, using `vsq1` on any node in the cluster, set the `JavaBinaryForUDx` Configuration Parameter (use `which java` to determine your java location):

```
vsq1 -t -c "ALTER DATABASE mydb SET JavaBinaryForUDx = '/usr/bin/java';"
```

10. Copy the Vertica Pulse install package to the VM then, as root, install the Pulse Package:

```
rpm -Uvh /path/to/vertica-pulse.x86_64.xxx.rpm
```

Note: Only install Vertica Pulse on a single node. All Pulse functions are available on all nodes. However, the installation SQL scripts and user-dictionary loading script are only

available on the node on which you install the Pulse package.

11. As dbadmin, run the Pulse install script on the node on which you installed the Pulse Package:

```
vsq1 -f /opt/vertica/packages/pulse/ddl/install.sql
```

Using Pulse

1. Run a sentiment function:

```
select sentimentanalysis('Cookies are sweet.') OVER(PARTITION BEST);
 sentence | attribute | sentiment_score
-----+-----+-----
          1 | cookies  |                1
(1 row)
```

Note: By default, VerticaPulse analyzes English text, however, you can also specify the language of the text being analyzed as an attribute of the sentimentanalysis() function. For example:

```
select sentimentanalysis('Cookies are sweet.', 'english') OVER(PARTITION BEST);
```

English and Spanish are the supported languages.

About the Vertica Pulse Package

Vertica Pulse provides a suite of functions that allow you to analyze and extract the sentiment from English and Spanish language text directly from your Vertica database.

Vertica Pulse features include:

- **Attribute based sentiment scoring** - Pulse scores the sentiment of attributes in a sentence. Attributes are generally nouns and are automatically discovered by Pulse. Pulse typically scores sentiment from a range of -1 (negative sentiment) to +1 (positive sentiment). A sentiment of 0 is considered neutral. Scoring individual attributes in a sentence instead of scoring the sentence as a whole provides a more granular analysis for the text. For example, consider the sentence "The quick brown fox jumped over the lazy dog." It would be difficult to score the sentiment on the sentence as a whole, but if you score on the attributes of fox and dog, you could say the sentiment on the fox was positive (the fox is quick), and the sentiment on the dog is negative (the dog is lazy).
- **Tuning to your domain** - Pulse provides functionality to recognize attributes that are specific to your domain. For example, you can add the name of your product or company to a 'white_list' so that it is discovered by Pulse.
- **Tuning of how sentiment is scored** - Pulse includes user-dictionaries of words that are used to help score sentiment. You can alter these user-dictionaries to fine tune the way your text is analyzed.
- **Filtering of attributes you are not interested in** - Pulse supports a special 'stop words' user-dictionary to indicate attributes that should not be analyzed. Alternately, you can choose to score sentiment only on attributes defined in your white_list.
- **Synonym mappings** - Pulse provides customizable mappings so that you can map synonyms to a base word, and then normalize the analysis for the synonyms to the base word. For example, you can map *Hewlett Packard* to *HP*.

Vertica Pulse requires that Java and the Vertica Java Support Package are installed on all nodes in the Vertica cluster.

Depending on the version of Pulse, it may support only one language (English or Spanish) or multiple languages (English and Spanish). For multilingual versions, Pulse can analyze each text row (for example a tweet) in the language of the text specified as argument, the language specified by the user as parameter or the default language. See [Multilingual Pulse](#) for details.

Installing or Upgrading Vertica Pulse

The Vertica Pulse Package requires that Java be installed prior to installing Vertica Pulse.

Vertica Pulse Package Version Requirements

Your server must be running version 7.1.x or later to run Pulse. Pulse must be installed on a Vertica node.

You can download the Vertica server package and from the [Vertica Marketplace](#).

Installation Overview

1. Verify that your Vertica server version matches your Vertica Pulse version.
2. [Install Java](#) on all Hosts and set the JavaBinaryForUDx Vertica configuration parameter to your Java binary location. For example, using vsql: ALTER DATABASE mydb SET JavaBinaryForUDx = '/usr/bin/java'
3. [Install the Vertica Package](#) on a single node in the cluster. The process is the same for installation or upgrade. You need only install it on a single node, but note that the SQL scripts used to install and uninstall the Pulse functions and the SQL script that creates pulse schema and the user-dictionaries tables are only available from the node on which you installed the Pulse package. The Pulse functions, once installed, are available on all nodes regardless if the package is installed on the node to which you are connecting.
4. [Modify the jvm resource pool](#) so that Pulse performs optimally on your system hardware.

Installing Java on Vertica Hosts

You must install a Java Virtual Machine (JVM) on every host in your Vertica cluster in order to run Pulse. Pulse requires a 64-bit Java Standard Edition 6, 7, or 8 (Java version 1.6, 1.7, 1.8) runtime. Both the Oracle JDK and openjdk are supported. You can choose to install either the Java Runtime Environment (JRE) or Java Development Kit (JDK), since the JDK also includes the JRE. See the [Java Standard Edition \(SE\) Download Page](#) to download an Oracle installation package for your Linux platform, or use your platforms packaging tool (such as yum or apt-get) to get a Java 1.6, 1.7, or 1.8 compatible version of open-jdk.

Once you have installed a JVM on each host, ensure that the `java` command is in the search path and calls the correct JVM by running the command:

```
java -version
```

This command should print something similar to:

```
java version "1.6.0_37"  
Java(TM) SE Runtime Environment (build 1.6.0_37-b06)  
Java HotSpot(TM) 64-Bit Server VM (build 20.12-b01, mixed mode)
```

Setting the JavaBinaryForUDx Configuration Parameter

The `JavaBinaryForUDx` configuration parameter tells Vertica where to look for the JRE to execute Java UDFs. After you have installed the JRE on all of the nodes in your cluster, you need to set this parameter to the absolute path of the Java executable. You can use the symbolic link that some Java installers create (for example `/usr/bin/java`). If the Java executable is in your shell search path, you can get the path of the Java executable by running the following command from the Linux command line shell:

```
$ which java  
/usr/bin/java
```

If the `java` command is not in the shell search path, use the path to the Java executable in the directory where you installed the JRE. For example, if you installed the JRE in `/usr/java/default` (which is where the installation package supplied by Oracle installs the Java 1.6 JRE), the Java executable is `/usr/java/default/bin/java`.

You set the configuration parameter by executing the following statement as a database superuser:

```
=> ALTER DATABASE mydb SET JavaBinaryForUDx = '/usr/bin/java';
```

See [ALTER DATABASE](#) for more information on setting configuration parameters.

To view the current setting of the configuration parameter, query the [CONFIGURATION_PARAMETERS](#) system table:

```
=> \x
Expanded display is on.
=> SELECT * FROM CONFIGURATION_PARAMETERS WHERE parameter_name =
'JavaBinaryForUDx';
-[ RECORD 1 ]-----+-----

description        | Path to the java binary for executing
                    | UDX written in Java
```

Once you have set the configuration parameter, Vertica will be able to find the Java executable on each node in your cluster in order to execute Java UDFs.

Note: Since the location of the Java executable is set by a single configuration parameter for the entire cluster, you must ensure that the path to the Java executable is the same across all of the nodes in the cluster.

Installing or Upgrading the Vertica Pulse Package on Your Host

After you install a JVM on all of the nodes in your cluster, you must install the Pulse Package on a single node. If upgrading, install the new package on the same host on which you previously installed the package. Pulse installation or upgrade is a two-step process:

1. Install/Update the RPM or DEB package for Pulse.
2. Run included sql scripts to install or update the Pulse functions and create the user dictionaries.

The Pulse install process installs the functions and schema required for sentiment analysis. You need only install it on a single node. However, be aware that the following SQL scripts are only available from the node on which you installed the Pulse package:

- SQL scripts used to install and uninstall the Pulse functions
- SQL script that populates and loads the dictionaries

You can access Pulse functions on all nodes, regardless if the package is installed on the node to which you are connecting.

Install or Upgrade the Pulse Package

When you upgrade or reinstall Pulse, it automatically uses port 5433 for vsql. If you are using a different port, configure it using the command `export VSQL_PORT=<port_number>`.

1. Copy the RPM or DEB package to the node where you want to install or upgrade Pulse. If you are upgrading Pulse then copy the new package to the same node where you previously installed the Pulse package. The version of Vertica Pulse must match the version of the Vertica server. For example, if your Vertica server is version 7.1.0, then the VerticaPulse version must also be 7.1.0.

If you are upgrading Pulse, you can find the currently-installed version number of Pulse with the command:

```
select lib_version, lib_sdk_version from user_libraries where lib_name = 'SentimentLib';
```

2. Log into the host and install the package.

- For Red Hat, use:

```
sudo rpm -Uvh /path-to-package/vertica-pulse.x86_64.xxx.rpm
```

- For Debian, use:

```
sudo dpkg -i /path-to-package/vertica-pulse.x86_64.xxx.deb
```

The Pulse Package is installed to `/opt/vertica/packages/pulse`.

After you install the package, you must run the appropriate SQL scripts to install or upgrade the Pulse functions and install the dictionary tables. Vertica automatically reloads any labeled user-defined dictionaries.

Running the Pulse Install Script

Run the install script to install or upgrade the Pulse functions and schema for the dictionaries and mappings required for sentiment analysis. You must run the install script once on the node on which you installed the package. After you run the install script, then all nodes can use the Pulse functions.

Important! Before running the install script, you must set the `JavaBinaryforUDx` configuration parameter or the install script fails to install the Pulse functions. See [Installing Java on Vertica Hosts](#).

To run the install script:

1. As the `dbadmin` user, on the node on which you installed the Pulse RPM/DEB, run the `install.sh` script:

```
bash /opt/vertica/packages/pulse/install.sh
```

Note: You must run the install script for installs or upgrades.

2. The script installs/upgrades the Pulse functions:

```
CREATE LIBRARY
CREATE TRANSFORM FUNCTION
etc...
```

3. If this is a fresh installation, then [Modify the jvm Resource Pool](#) to match your system hardware.

Tuning the `jvm` Resource Pool for Vertica Pulse

Note: You must modify the `jvm` resource pool to match the capabilities of your hardware so that Vertica Pulse has adequate resources to perform queries. If a cluster does not have sufficient resources to run a Vertica Pulse query, then such a query can fail with an Out Of Memory (OOM) exception.

Vertica Pulse runs as a Java UDX (User Defined eXtension) and uses the `jvm` resource pool to define the resources available to run Vertica Pulse queries.

Vertica starts a Java Virtual Machine (JVM) when you perform a Vertica Pulse query. The session from which you issue the query reserves resources for the JVM (across all nodes in the cluster) and it releases the resources when the session ends. You can also explicitly close the JVM attached to the session by using the command `SELECT release_jvm_memory();`

The most critical resource pool settings that affect Vertica Pulse are `MAXMEMORYSIZE` and `PLANNEDCONCURRENCY`.

- `MAXMEMORYSIZE` defines the amount of RAM that a JVM can use. By default `MAXMEMORYSIZE` is set to either 10% of system memory or 2GB, whichever is smaller.
- `PLANNEDCONCURRENCY` defines how many JVMs are allowed to run across the cluster and how many Pulse sessions you are able to run cluster-wide. By default, `PLANNEDCONCURRENCY` is set to `AUTO`, which is the lower of either the number of cores on the node, or memory / 2GB, but it is never automatically set to less than "4".

The amount of memory that each JVM is allocated is determined by `MAXMEMORYSIZE / PLANNEDCONCURRENCY`. For example, suppose `MAXMEMORYSIZE` is set to 8G and `PLANNEDCONCURRENCY` is set to 2. In this case, only a maximum of 2 sessions can run Vertica Pulse queries and the session JVMs have a maximum memory size of 4GB.

Tip: The basic thing to remember is that `PLANNEDCONCURRENCY` controls the number of sessions across the entire cluster that can run the `sentimentAnalysis()` function. If set to 1, then only a single session can run Pulse functions. No other sessions are able to run Pulse or Java UDX functions until the session currently running Pulse functions is closed.

While resource pool settings are based on the resources of a node, they apply across the entire cluster. A session with a Vertica Pulse query reserves the same resources for its JVM on all nodes in the cluster. Therefore, it doesn't matter if the cluster contains 3 nodes or 30 nodes;

each node reserves, for example, 4GB of the node's memory for the JVM used by the Vertica Pulse session and `PLANNEDCONCURRENCY` limits the amount of sessions that can run Pulse cluster-wide. If `PLANNEDCONCURRENCY` is 1, then only 1 vsql session (or client connection) in the entire cluster can run Pulse.

You can display the current resource pool settings for the `jvm` resource pool with the following command:

```
select name, MAXMEMORYSIZE, PLANNEDCONCURRENCY from V_CATALOG.RESOURCE_POOLS
where name = 'jvm';
```

Configuring the `jvm` Resource Pool for your System

Do not use the default `jvm` resource pool settings for Vertica Pulse. You must configure the `jvm` resource pool to match your hardware and workload requirements. Specifically, specify `PLANNEDCONCURRENCY` and `MAXMEMORYSIZE` to match your hardware.

You may need to experiment to find the optimal settings for your hardware and your specific workloads. As a best practice, allow:

- At least 2GB of memory per session for Vertica Pulse
- At least 25% of the memory available for general Vertica overhead. Essentially, `MAXMEMORYSIZE` must never exceed 75% of total system memory.

Note: If you are running a lot of queries not in the context of Vertica Pulse, then you should allow for more memory to be available outside of the `jvm` resource pool.

To configure your system for Vertica Pulse:

- Determine the number of cores on a node. Your `PLANNEDCONCURRENCY` setting cannot exceed this value. For example, you can run the following from a shell to determine cores:

```
cat /proc/cpuinfo | egrep "core id|physical id" | tr -d "\n" | sed s/physical/\\nphysical/g |
grep -v ^$ | sort | uniq | wc -l
```

- Determine the amount of memory in GB on a node. Your `MAXMEMORYSIZE` cannot exceed 75% of the total system memory. For example, you can run the following from a shell to determine the Total System Memory in GB for any particular node:

```
awk /MemTotal/{printf "%f GB\n", $2/1024/1024}' /proc/meminfo
```

- Use the formula $MAXMEMORYSIZE / PLANNEDCONCURRENCY$ to determine how much memory each Vertica Pulse JVM receives. For example, you can use $(.75 * Total\ System\ Memory) / PLANNEDCONCURRENCY$ if you plan to use most of your RAM for Vertica Pulse. The outcome of the formula must be 2 (which denotes GB) or greater. For example, if you have 8GB of total system memory, and your estimated `PLANNEDCONCURRENCY` is 3, then the formula results in "2" and is acceptable. However, if you have the same amount of memory and `PLANNEDCONCURRENCY` is set to 4, then the result of the formula is "1.5", which is below the recommended minimum of 2GB. You can either add more RAM to the system or reduce `PLANNEDCONCURRENCY` to get the resulting number up to "2".
- Finally, alter the `jvm` resource pool. For example, for a cluster with nodes each having 16GB of memory, and you determine to use up to 75% of the total system memory ($0.75 * 16GB = 12GB$) for Vertica Pulse, then you can set the resource pool as follows:

```
ALTER RESOURCE POOL jvm MAXMEMORYSIZE '12G' PLANNEDCONCURRENCY 3;
```

Note: For evaluation purposes on systems with lower memory, set `MAXMEMORYSIZE` to 75% and `PLANNEDCONCURRENCY` to 1: `ALTER RESOURCE POOL jvm MAXMEMORYSIZE '75%' PLANNEDCONCURRENCY 1;` While these settings are unsupported, they do allow you to run simple Vertica Pulse queries. You may experience Out Of Memory exceptions and slow performance.

For additional details, see:

- [ALTER RESOURCE POOL](#)
- [Managing Workloads](#)
- [Java UDx Resource Management](#)

Assign Users to the `pulse_users` Role and Allow Access to Pulse Functions

When you install Pulse, the install script creates a pulse schema, which contains the user-dictionary and mapping lists used by Pulse. Initially only administrators can read or edit tables in the pulse schema. To give non-administrator database users access to the pulse schema, you assign the user to the 'pulse_users' role, which has all privileges for the pulse schema. The role is created automatically when you install Pulse.

Note: The default dbadmin user has access to the pulse schema by default. You do not need to add the `pulse_users` role to the dbadmin account.

Granting users Access to the Pulse Schema

To grant non administrator users access to the tables in the Pulse schema:

1. As the dbadmin, if the user does not exist, create the user with the command: `create user username identified by 'password';`
2. As the dbadmin, if the user does not have access to function in the `public` schema, then grant execute privileges with the command: `GRANT execute ON ALL FUNCTIONS IN SCHEMA public TO username;`

Note: By default, the Pulse functions are created in the `public` schema.

3. As the dbadmin, grant the `pulse_user` role to the new user with the command: `grant pulse_users to username;`
4. As the user to which you granted the `pulse_user` role, set the users role to `pulse_users` with the command: `set role pulse_users;`

Note: The user must run the `set role` command per session to read or edit tables in the pulse schema.

Uninstalling Vertica Pulse

Uninstalling Vertica Pulse on hosts and uninstalling Pulse packages require different procedures.

Uninstall Vertica Pulse on Your Hosts

As the dbadmin, run the uninstall script from the node on which you installed the Pulse package:

```
bash /opt/vertica/packages/pulse/uninstall.sh
```

The uninstall script removes all Pulse functions, but does not remove the pulse schema containing the user-dictionary and mapping tables.

To remove all Pulse dictionaries and mappings, including custom dictionaries, include the `-r` parameter

```
bash /opt/vertica/packages/pulse/uninstall.sh -r
```

Uninstall Pulse Packages

To uninstall the Pulse package, on the nodes that have the Pulse package installed, use the appropriate command for your package.

- For RPM packages:

```
# sudo rpm -e vertica-pulse
```

- For DEB packages:

```
# sudo dpkg --remove vertica-pulse
```

The Pulse schema and associated user-dictionary and mapping tables remain in the database. To remove the Pulse schema and its associated tables, run the following command:

```
DROP SCHEMA pulse CASCADE
```

Using Pulse

Dictionaries and Mappings

Pulse contains built-in dictionaries and maps that help determine the sentiment of sentences. You have the option of creating and loading user-defined dictionaries and maps.

Dictionaries and Mappings are loaded across all client sessions and remain in memory even if the database is stopped and started.

Dictionaries

Pulse uses a proprietary system dictionary to help score sentiment. The system dictionary is not visible or modifiable. You can, however, alter the default way that Pulse scores sentiment by modifying user dictionaries. The user dictionaries provide flexibility so that you can tune sentiment scoring for your specific domain. You do not have to modify user dictionaries if Pulse is scoring your data appropriately.

Users can apply dictionaries on a per-user basis. Any number of Pulse users can concurrently apply different sets of dictionaries without conflicts and without disrupting the sessions of other users. Each user can have one dictionary of each type loaded at any given time. If a user does not specify a dictionary of a given type, Pulse uses the default dictionary for that type.

Mappings

Maps are lists of synonyms of one or more words that map to another word. Using maps allows you to analyze text that pertains to the same subject or concept but may use slightly different terminology.

For example, you can map both 'Hewlett Packard' and 'Hewlett-Packard' (with hyphen) to 'HP.' Pulse substitutes the mapped words to the core word when it runs its analysis.

Dictionary and Mapping Tables

User dictionaries and a normalization map for each supported language reside in tables inside the Pulse schema. You can see the contents of the tables with simple queries such as:

```
SELECT * FROM pulse.pos_words_en;
```

Or:

```
SELECT * FROM pulse.pos_words_es;
```

There is one table per dictionary/map for each language. The table name has the language abbreviation as a suffix. For example, English tables have the suffix "_en" and Spanish tables have the suffix "_es". By default, the user dictionaries and normalization map are empty. You can modify these tables to tune Pulse to your specific needs. After you modify these tables, you must load the changes into memory.

You can update the user dictionaries and normalization tables at any time. To do so, you must run load functions (see [LoadDictionary\(\)](#) and [LoadMapping\(\)](#)) to load the values from the tables into memory. Your changes affect sentiment scoring only after you load the new values.

Note: Loading a user dictionary or loading a normalization map overwrites the values in memory with the values from the specified table. You cannot append user dictionaries or the normalization map in memory.

The following dictionary table names provide descriptions of the English user dictionaries. For Pulse versions that support Spanish, the same set of dictionaries with the suffix "_es" is present in the Pulse schema.

Dictionary Table Name	Description
white_list_en	Words that are always marked as an attribute. This list augments the built-in Pulse attribute discovery process. Add words that you always want scored to the white_list user dictionary. For example, such words can include nouns, phrases or business-dependent attributes that are not auto-discovered by Pulse. This list is typically modified to increase the accuracy of sentiment scoring for your domain.
stop_words_en	Words that are never marked as an attribute. Add words that you do not want scored to the stop_words user dictionary. Use this dictionary to filter out attributes that are not of interest to your analysis. This list is typically modified to increase the accuracy of sentiment scoring for your domain. The stop_words dictionary can only contain nouns and compound nouns. If Pulse does not identify a stop word as a noun, it ignores it.
pos_words_en	Positive words that can be any type of word or phrase. Words in this list are more likely to carry a positive polarity in general. You can also add exact phrases, such as idioms, to this list.

Dictionary Table Name	Description
	Examples: <i>adroit, resolve, strong, hit the nail on the head</i>
neg_words_en	Negative words that can be any type of word or phrase that have a negative connotation. Words in this list are deemed more likely to carry a negative polarity in general. You can also add exact phrases, such as idioms, to this list. Examples: <i>abhorrent, butcher, racist, wrath, flash in the pan.</i>
neutral_words_en	Words that indicate a neutral connotation. Words in this list are scored with a sentiment of 0, meaning not positive or negative.

The following table shows the tables that describe mapping within Pulse.

Mapping Table Name	Description	Example
normalization_en	A list of word pairs used to map like terms (synonyms). You can use this to correct common misspellings and map them to the correct spelling. This list is frequently modified and is empty by default.	base/synonym: <ul style="list-style-type: none"> • 'hp'/ 'hewlett-packard' • 'hp'/ 'Hewlett-Packard' • 'Obama'/ 'President Obama' • 'Obama'/ 'Barack Obama'

Loading Dictionaries and Mappings into Pulse

If you have made changes to the Pulse schema tables, then you must load either the dictionaries, the normalization map, or both. After the changes are loaded, Pulse stores them in memory across all sessions in the cluster. Because Pulse automatically loads the dictionaries and mapping at startup, you do not need to reload them after a database restart or system reboot.

- To load an individual user dictionary into memory, use the [LoadDictionary\(\)](#) function with the appropriate parameter and word list.
 - `LoadDictionary` does not append user-dictionary lists. Instead, it overwrites them. If you load a user dictionary more than once with the same list name, then only the most recent user dictionary is loaded for that list name.
- To load the normalization mapping into memory, use the [LoadMapping\(\)](#) function with the normalization map.
 - If you load a mapping with an incorrect `mapName`, then the result of `LoadMapping()` is false and the map is not loaded. `LoadMapping()` does not append maps. Instead, it overwrites them. If you load a map more than once with the same `mapName`, then only the most recent mapping is loaded for that `mapName`.
 - If `LoadMapping()` is successful, Vertica returns a success message from each node in the cluster.

Automatically Loading Dictionaries and the Normalization Map

For ease of use, Pulse ships with a script to automatically load into memory all of the required user dictionaries and the normalization mapping. This script only exists on the node on which you installed the Pulse RPM/DEB package.

You can run the script from within `vsq` with the following command:

```
\i /opt/vertica/packages/pulse/ddl/loadUserDictionaries.sql
```

Manually Loading Dictionaries and the Normalization Map

If you want to manually load certain user dictionaries or mappings from the Pulse schema tables, run the following command. This example loads the `pos_words` dictionary. See [LoadDictionary\(\)](#) for valid values for the `listName` parameter and for multilingual version loading.

Note: The following examples use the English dictionaries. For Spanish, replace `"_en"` with `"_es"`.

1. Add a word to the pos_words dictionary:

```
=> INSERT INTO pulse.pos_words_en VALUES('SuperDuper');  
=> COMMIT;
```

By default, added words are not case sensitive. "ERROR" produces the same results as "error". You can, however, specify a case setting for a single word using the \$Case parameter. For example, to identify "Apple", rather than "apple", you would add the following:

```
=> INSERT INTO pulse.white_list_en VALUES('$Case(Apple)');  
=> COMMIT;
```

2. Load the updated dictionary into Pulse:

```
=> SELECT LoadDictionary(standard USING PARAMETERS  
listName='white_list') OVER()  
FROM pulse.white_list_en;
```

3. If you change the normalization map, you can load the new normalization values with the following command:

```
=> SELECT LoadMapping(standard_base, standard_synonym USING PARAMETERS  
mapName='normalization') OVER() FROM pulse.normalization_en;
```

After loading, Vertica returns a success message and the number of rows (words or word pairs) loaded.

Dictionary and Mapping Labels

You can apply a label to any user-defined dictionary or mapping when you load that object. Labels enable you to perform sentiment analysis against a predetermined set of dictionaries and mappings without having to specify a list of dictionaries. For example, you might have a set of dictionaries labeled "music" and a set labeled "movies." The default user dictionaries automatically have a label of "default."

A single dictionary or mapping can have multiple labels. For example, you might label a white list of artists as both "painters" and "renaissance." You could load the dictionary by loading either label. A label can only apply to one dictionary of each type. For example, you cannot have two dictionaries of stop words that share the same label. If you apply a label to multiple dictionaries of the same type, Pulse uses the most recently applied label.

You can view the labels associated with your current dictionaries using the [GetAllLoadedDictionaries\(\)](#) function. You can also view the label associated with your current mapping using the [GetLoadedMapping\(\)](#) function.

Normalization Map Effect on Results

Before any of the sentiment analysis functions are run on the text, the normalization map is applied. When a sentiment analysis function is run, Pulse replaces the synonym with the base word. The result of the sentiment analysis function displays the mapped words and not the original text. For example, Pulse maps both 'Hewlett Packard' and 'Hewlett-Packard' (with a hyphen) to 'HP' in the results when the normalization map is populated with those terms.

Before Mapping

The following example demonstrates sentiment analysis before mapping:

```
=> SELECT SentimentAnalysis('Hewlett-Packard was founded in 1939.  
Hewlett Packard was started in a garage in Palo Alto California')  
OVER(PARTITION BEST);
```

sentence	attribute	sentiment_score
1	hewlett-packard	0
2	hewlett packard	0
2	garage	0
2	palo alto california	0

(4 rows)

Insert Normalization Values and Load Map

You can add values to the normalization map using an INSERT statement. The following example demonstrates how to insert normalization values and load the map:

```
=> INSERT INTO pulse.normalization_en VALUES('HP', 'Hewlett-Packard');  
=> INSERT INTO pulse.normalization_en VALUES('HP', 'Hewlett Packard');  
=> COMMIT;  
  
=> SELECT LoadMapping(standard_base, standard_synonym  
USING PARAMETERS mapName='normalization') OVER()  
FROM pulse.normalization_en;
```

You can also map multiple values to the same term using a `$LIST` parameter. The following example would map multiple alternate names for the city of Boston to the value 'Boston'.

```
INSERT INTO normalization_en Values( 'Boston', '$LIST(BOS,beantown,the hub);
```

After Mapping

The mapping operation replaces the attributes with their counterparts from the normalization list and displays the base terms:

```
=> SELECT SentimentAnalysis('Hewlett-Packard was founded in 1939.  
Hewlett Packard was started in a garage in Palo Alto California')  
OVER(PARTITION BEST);
```

sentence	attribute	sentiment_score
1	hp	0
2	hp	0
2	garage	0
2	palo alto california	0

(4 rows)

The `CommentAttribute()` function also uses the normalization map and displays the base terms instead of the original text:

```
=> SELECT CommentAttributes('Hewlett-Packard was founded in 1939.  
Hewlett Packard was started in a garage in Palo Alto California')  
OVER(PARTITION BEST);
```

sentence	attribute
1	hp
2	hp
2	garage
2	palo alto california

(4 rows)

Creating Tables for Custom Dictionary Mappings

The Vertica Pulse package includes all the necessary user dictionary and mappings tables. However, you can create your own tables to store additional user dictionaries or mappings. For example:

```
CREATE TABLE my_positive_words(word VARCHAR(64));
```

The following example shows how to create a table, add terms to it, and then load the table as a normalization map:

```
=> CREATE TABLE myNormalization(base VARCHAR(64), synonym VARCHAR(64));  
=> INSERT INTO myNormalization VALUES('hp', 'Hewlett Packard');  
=> INSERT INTO myNormalization VALUES('hp', 'Hewlett-Packard');  
=> COMMIT;  
  
=> SELECT LoadMapping(base, synonym USING PARAMETERS
```

```
mapName='normalization') OVER() FROM myNormalization;
```

After loading, Vertica returns a success message from each node in the cluster.

Using Action Patterns in Dictionaries

Vertica Pulse supports the use of action patterns in `white_list` dictionaries only. An action pattern enables Pulse to recognize phrases that denote action, intention, or interest, such as *going to buy*, *waiting to see*, and so on. Action patterns can identify behaviors associated with your sentiment analysis terms.

Action patterns can:

- **Connect Word Forms to a Root Word** — Vertica Pulse lemmatizes all words. *Lemmatization* recognizes different word forms and maps them to the root word. For example, Pulse would map *bought* and *buying* to *buy*. This ability extends to misspellings. For example, *tryiiing* and *seeeeee taaablets* would map to *trying* and *seeing tablets*.
- **Create Object-Specific Queries** — To identify only the attributes that are objects of action patterns, create a [whitelist dictionary](#) that contains only action patterns of interest. In your sentiment analysis query set the `actionPattern` and `whiteListOnly` parameters to `true`.

Note: Action patterns exist in the whitelist dictionary. If a word that matches an action pattern appears in both the `white_list` and `stop_words` dictionaries, the `white_list` takes precedence. The `stop_list` word would appear in sentiment analysis results.

Action Pattern Syntax

Construct an action pattern by combining action parameters within an `#action`. By default, parameters match any instance of the associated part of speech. You can match specific terms by listing them with the parameter. For example, the parameter `$PREP(to, on)`, would match only *to* and *on*.

Parameters can also accept [\\$regex](#) and [\\$list](#) operators.

```
#action{$ADV $VERB $PREP $ADJ}
```

Parameter	Short form	Description
<code>\$ADJECTIVE</code>	<code>\$ADJ</code>	Matches any adjective.

\$ADVERB	\$ADV	Matches any adverb.
\$PREPOSITION	\$PREP	Matches any preposition.
\$VERB	\$VERB	Matches any verb.

Default Action Patterns

Pulse includes default action patterns in the whitelist dictionary. You cannot remove these patterns. Pulse always evaluates them when you perform a sentiment analysis.

Language	Pattern	Example
English	\$Verb \$Prep \$Verb	<i>planning on buying, thinking about dropping</i>
	\$Verb TO \$Verb	<i>going to buy, looking to acquire</i>
Spanish	\$Verb \$Prep \$Verb	<i>voy a comprar, pienso en dejar</i>
	\$Verb \$Verb	<i>quiero solicitar, planean adquirir</i>

Examples

The following example shows how Pulse can match *customer* or *client*, the verb *would* and any other verb. It would match phrases like *customer would buy* or *client would cancel*.

```
INSERT INTO pulse.white_list_en values('#action{${LIST(customer,client)} would $VERB}');
```

The following example shows a match for specific verbs *like*, *want*, and *plan*, plus any preposition and any other verb. It would match phrases like *want to own* or *plan on buying*.

```
INSERT INTO pulse.white_list_en values('#action{${VERB(like,want,plan)} $PREP $VERB}');
```

The following example identifies words ending in *ember*, such as *December*, and uses a regular expression to identify date references, such as *2nd* or *4th*. This action pattern could identify users planning to attend an event or making holiday plans.

```
INSERT INTO pulse.white_list_en values('#action{On $regex(.*ember) $regex(\d+(th|st|nd|nd)) I will $verb to}');
```

Using Lists In Dictionaries

Vertica Pulse supports the use of token-based lists in dictionaries. You can use a list to match multiple terms to a single word. Token based lists differ from mapping by allowing you to create multiple associations in a single action rather than a series of pairs. Unlike mapping, lists are not restricted to the normalization dictionary.

Note: Token-based lists do not apply to the base word in normalization dictionaries.

You can add lists to the following dictionaries:

- pos_words
- neg_words
- neutral_words
- normalization
- white_list
- stop_words

You can add a token to a user-defined dictionary using an INSERT statement and \$LIST parameter containing the list of values to match.

The following example would match slang terms to the word "good".

```
INSERT INTO pos_words Values( 'good', '$LIST(sweet,dope,tight);
```

Using Regular Expressions in Dictionaries

Vertica Pulse supports the use of regular expressions in [user-defined dictionaries](#). Vertica Pulse regular expressions use the [java.util.regex](#) package syntax. For more information on this syntax, refer to the Oracle documentation.

Note: Regular expressions do not apply to the base word in normalization dictionaries.

You can add regular expressions to the following dictionaries:

- pos_words
- neg_words
- neutral_words
- normalization
- white_list
- stop_words

You can add a regular expression to a user-defined dictionary using an [INSERT](#) statement and \$REGEX parameter containing the regular expression. Regular expressions are case insensitive. the regular expression \$regex(apple) produces the same matches as the regular expression \$regex(Apple).

Note: A regular expression can support a single token or word. *Smartphone* would be a valid token, but *smart phone* would not .

The following example would match any word ending with the string "day". You could use it to identify the days of the week or words such as *yesterday* and *today*.

```
INSERT INTO stopwords_en Values( '$LIST(nice,good,fine) $REGEX(.*day)');
```

The following example matches references to iPhones, including the number and letter version.

```
INSERT INTO whitelist_en Values('Iphone $REGEX(\d{1}(S|C)?)');
```

To use a parenthesis as a literal part of a regular expression, you must use the escape character \ twice to prevent Pulse from interpreting the parenthesis as metacharacter in the regular expression. The following example would match the literal string (hugs).

```
INSERT INTO whitelist_es Values($REGEX(\\(hugs\\));
```

Determining Sentiment

You determine sentiment by using the [SentimentAnalysis\(\)](#) function on text.

The [SentimentAnalysis\(\)](#) function first extracts the attributes (typically nouns) from the sentence, and then applies a sentiment score to each attribute. Scores can be one of the following:

- **1** - Positive Sentiment
- **0** - Neutral Sentiment
- **-1** - Negative Sentiment

This provides a more granular analysis than just determining the sentiment for the sentence as a whole. Consider the following quote from Abraham Lincoln; "*Force is all-conquering, but its victories are short-lived.*" If you were to score the sentiment of the sentence as a whole by averaging the sentiment of its parts, then the sentiment is neutral.

```
=> select avg(t1.sentiment_score) as 'Average Sentiment' from (  
    select sentimentAnalysis('Force is all-conquering, but its victories are short-lived.')  
    over (PARTITION BEST)  
    ) as t1;  
  
Average Sentiment  
-----  
0
```

If you score the individual attributes of the sentence, then you can obtain a much more precise analysis of the sentiment than if you were trying to assign a single score to the entire sentence. For example:

```
=> select sentimentAnalysis('Force is all-conquering, but its victories are short-lived.') over  
(PARTITION BEST);  
  
sentence | attribute | sentiment_score  
-----+-----+-----  
1 | force | 1  
1 | victories | -1
```

"Force" is scored with positive sentiment because it is "all-conquering". "Victories" is scored with negative sentiment because it is "short-lived".

Note: Vertica Pulse does not recognize personal pronouns (I, you, we, he, she, it, etc.) as attributes.

`SentimentAnalysis()` also extracts the sentiment from multiple sentences and returns the sentence in which attributes are found:

```
=> SELECT SentimentAnalysis('Force is all-conquering, but its victories are short-lived. Every good boy deserves fudge.') OVER(PARTITION BEST);
```

sentence	attribute	sentiment_score
1	force	1
1	victories	-1
2	boy	1
2	fudge	1

(4 rows)

"Boy" is scored with positive sentiment because he is good. Fudge is scored with positive sentiment because it is something that is deserved.

Note: The sentence detector considers a period to mark the end of a sentence. Some abbreviations that use a period, such as Dr. or Mr., cause the sentence detector to end the sentence at the abbreviation.

The `SentimentAnalysis` function also identifies attributes with neutral sentiment (a sentiment score of zero). For example:

```
SELECT SentimentAnalysis('Roses are red. Violets are blue.') OVER(PARTITION BEST);
```

sentence	attribute	sentiment score
1	roses	0
2	violets	0

(2 rows)

Both roses and violets receive neutral sentiment because neither being red nor blue is considered positive or negative in this context.

See the [Pulse Cookbook](#) for more examples of determining sentiment.

Sentiment Analysis Levels

Vertica Pulse is capable of determining sentiment at the following levels:

- Attribute
- Sentence
- Document

You can specify an analysis level using the granularity parameter of the `SentimentAnalysis` function. You can perform multiple levels of analysis simultaneously within the same query.

Attribute-Level Analysis

Attribute level analysis provides a sentiment for each object in a sentence. This behavior is the default level of analysis for Pulse. Attribute analysis identifies the objects of a sentence and any sentiment expressed regarding those objects.

The following example shows the sentiment expressed with regard to "camera" and "quality pictures."

```
Select SentimentAnalysis ('The camera takes great quality pictures but is expensive. It feels like a professional one' USING PARAMETERS
granularity='A') over();
sentence | attribute | sentiment_score
-----+-----+-----
1 | camera | 1
1 | quality pictures | 1
```

Sentence-Level Analysis

A sentence level analysis provides the overall sentiment of each sentence in a document. If a sentence contains both positive and negative sentiments, it appears as mixed.

The following example shows two sentences, the first of which is mixed. As a mixed sentiment, the sentiment score is 0, or neutral, and the mixed value is true. The second sentence is entirely positive. Its sentiment is 1, or positive, and the mixed value is false.

```
Select SentimentAnalysis ('The camera takes great quality pictures but is expensive. It feels like a professional one' USING PARAMETERS
granularity='S') over();
sentence | sentiment_score | mixed
-----+-----+-----
1 | 0 | true
2 | 1 | false
```

Document-Level Analysis

Document level analysis provides the overall sentiment of an entire document. If you wanted to know if a movie review was positive, negative, or mixed, a document level analysis could provide that information. Document level analysis gives both the overall sentiment score and a mixed rating if the sentiment is not exclusively positive or negative.

The following example shows that overall, the writer is positive but does express some negative sentiments.

```
Select SentimentAnalysis ('The camera takes great quality pictures but is expensive. It feels like a professional one' USING PARAMETERS  
granularity='D') over();  
sentiment_score | mixed  
-----+-----  
1 | true
```

Tuning Pulse

Pulse contains built-in dictionaries that help to determine the sentiment of sentences. These dictionaries are not directly readable. However, you can modify the Pulse dictionary tables to improve automatic attribute discovery and provide more accurate results for sentiment scoring based on your specific data sets. The dictionary tables are available in the Pulse schema. Any words you add to these dictionaries takes precedence over the built-in dictionaries.

Improving Automatic Attribute Discovery

Pulse identifies nouns in sentences and marks them as attributes. However, there are two dictionaries and one mapping that you can modify to improve automatic attribute discovery. These are:

- `white_list` - a list of words on which you want to score sentiment, but are not auto-discovered by Pulse. Typically these are product or company names, or special words in the domain of the data you are analyzing. You can also add noun phrases to the `white_list`.
 - Consider the term "President Smith". Pulse automatically marks "President" as an attribute. However, you can add "President Smith" to the `white_list` and Pulse then uses "President Smith" as the attribute instead of just "President".
 - If your `white_list` contains phrases that are subsets of other phrases in the white list, then the shorter phrase is not matched if the text being analyzed matches the superset phrase. For example, if both "Honest AI" and "Honest AI Car Emporium" are in the `white_list`, then the latter phrase is identified as an attribute in the text "Honest AI Car Emporium is not honest.", not the shorter "Honest AI" `white_list` phrase.
- `stop_words` - a list of words on which you do not want to score sentiment, but may appear frequently in your data set. `stop_words` is basically a way to filter out attributes.
 - If a word appears in both `stop_words` and `white_list`, then the `white_list` word takes precedence. The word appears in results even though it is in the `stop_words` dictionary.
- `normalization` - a map of base words and synonyms that allow you to normalize words for easy comparison. For example, you can normalize "Hewlett Packard" to "HP", then count the number of times "HP" appears as an attribute in your data. Any text that contains "HP" or "Hewlett Packard" is counted towards the total.

Determining How Pulse Scores Sentiment

When tuning Pulse it is important to understand why Pulse may not be scoring a particular attribute the way you want it to be scored. For example, consider the sentence "The quick brown fox jumped over the lazy dog." By default, Pulse scores the fox as positive and the dog as negative. If you want to better understand how the words in the sentence affect the attributes, then you can use the *relatedwords* parameter to see which words are affecting the score. For example:

```
select SentimentAnalysis('The quick brown fox jumped over the lazy dog.'  
  USING PARAMETERS relatedwords=true) OVER(PARTITION BEST);
```

sentence	attribute	sentiment_score	related_word_1	related_word_2	related_word_3
1	fox	1	quick	lazy	
1	dog	-1	lazy		

(2 rows)

The output details that "quick" and "lazy" impacted the scoring of the "fox" attribute, and that "lazy" affected the scoring of the "dog" attribute. "Quick" (positive) is weighted heavier than "lazy" (negative) when scoring "fox" because the word "quick" is closer to the attribute "fox" in the sentence, and the result is that "fox" is scored positively. "Lazy" (negative) is the only related word being used to score the sentiment for "dog". If you don't agree with the scoring, you can change how these related words affect the score by adding them to the appropriate user-dictionary, as described in "Improving Sentiment Scores".

Improving Sentiment Scores

Pulse scores sentiment on attributes (nouns) in sentences using Natural Language Processing (NLP) algorithms and rules. Pulse attempts to identify the parts of a sentence (for example, verbs, nouns/attributes, adjectives, etc; the parts of speech), and then scores the attributes based on which system-dictionaries the parts of speech appear (positive, negative, or neutral) and where those parts of speech appear in relation to the attributes and other contextual information. Pulse does not identify personal pronouns (he, you, we, she, etc.) as attributes.

Pulse provides a [PartsOfSpeech](#) function so that you can verify which parts of speech are being identified in a sentence.

Sentiment Scoring and the Precedence of Pulse User-Dictionaries

The negative, positive, and neutral user-dictionaries adjust the score of an attribute based on which dictionary the words in the sentence appear. User-dictionaries take precedence over the internal dictionaries that Pulse uses for analyzing text, so that you can override the default polarity of an opinion word or phrase by inserting it in the appropriate user-dictionary table.

Pulse also supports using phrases in the `pos_words`, `neg_words` and `neutral_words` dictionaries. Phrases, such as idioms ("hit the nail on the head."), can be added to the user dictionaries. Phrases of two or more words support "fuzzy" matching. For example, the phrase "solve problem" also matches "solves problems".

Pulse uses an order of precedence to determine which user dictionary is used to modify the default score. The order of precedence of the user dictionary that Pulse uses to score attributes is as follows:

1. Phrases or strings that occur in the "neutral_words" dictionary
2. Phrases or strings that occur in the "neg_words" dictionary
3. Phrases or strings that occur in the "pos_words" dictionary
4. Single words appearing in the "neutral_words" dictionary
5. Single words appearing in the "neg_words" dictionary
6. Single words appearing in the "pos_words" dictionary

Note: If a word is present in both `stop_words` and `white_list`, then the `white_list` word takes precedence. The word is present in results even though it exists in `stop_words`.

Consider the sentence "Fudge is good". It contains three parts; a noun (fudge), a verb (is), and an adjective (good). When you analyze the sentence using Pulse, it identifies "fudge" as an attribute, because it is a proper noun, and then assigns "fudge" a positive sentiment:

```
select sentimentAnalysis('Fudge is good') OVER(PARTITION BEST);
  sentence | attribute | sentiment_score
-----+-----+-----
1 | fudge | 1
```

The number of words matched against a dictionary also has an impact on which dictionaries take precedence. For example, phrases or word combinations in the user-dictionary lists take precedence over single words. For example, the positive phrase "solve problem" causes a positive score on the text "Joe solves problems", even though "problem" is a negative word. Since phrases have precedence over single words, a positive score is applied to Joe.

```
SELECT SentimentAnalysis('Joe solves problems.') OVER(PARTITION BEST);
```

```
sentence | attribute | sentiment_score  
-----+-----  
1 | joe      | 1  
(1 row)
```

```
SELECT SentimentAnalysis('Joe is a problem.') OVER(PARTITION BEST);
```

```
sentence | attribute | sentiment_score  
-----+-----  
1 | joe      | -1  
1 | problem  | 0  
(2 rows)
```

Tuning Example

You can modify any of the user-dictionaries to improve the accuracy of sentiment scores. The two basic dictionaries, "neg_words" and "pos_words", are typically the easiest to modify to get good results. Words in these two dictionaries can be any part of speech (verb, adjective, etc.). If you find a word that is causing an attribute to be scored positively or negatively, but it should be scored as neutral, then you can add that word to the "neutral_words_en" dictionary to cause it to be scored 0.

Consider the sentence "The product delivers simplicity.":

```
select sentimentAnalysis('The product delivers simplicity.') over(PARTITION BEST);
```

```
sentence | attribute | sentiment_score  
-----+-----  
1 | product  | 0  
1 | simplicity | 0  
(2 rows)
```

If you want "product" to be scored positively in this sentence, then you must add "deliver simplicity" to the pos_words user-dictionary. "deliver simplicity" will also match "delivers simplicity" due to the "fuzzy" matching feature of phrases in the dictionaries. If you add "simplicity" by itself to the "pos_words" dictionary, then simplicity in any context is considered positive, which may not be the result you want to achieve across your entire domain. The following example adds "deliver simplicity" to the pos_words user-dictionary for the English language:

```
insert into pulse.pos_words_en values ('deliver simplicity');
commit;

-- you must reload the dictionaries for the changes to be effective
\i /opt/vertica/packages/pulse/ddl/loadUserDictionaries.sql

select sentimentAnalysis('The product delivers simplicity.') over(PARTITION BEST);
 sentence | attribute | sentiment_score
-----+-----+-----
          1 | product   |                 1
(1 row)
```

Notice that "simplicity" is not positive if it is not paired with "deliver":

```
select sentimentAnalysis('The product provides simplicity.') over(PARTITION BEST);
 sentence | attribute | sentiment_score
-----+-----+-----
          1 | product   |                 0
          1 | simplicity |                 0
(2 rows)
```

If you want "simplicity" to always be positive, add it to the "pos_words" list. This example replaces "deliver" with "provides":

```
insert into pulse.pos_words_en values ('simplicity');
commit;

\i /opt/vertica/packages/pulse/ddl/loadUserDictionaries.sql

select sentimentAnalysis('The product provides simplicity.') over(PARTITION BEST);
 sentence | attribute | sentiment_score
-----+-----+-----
          1 | product   |                 1
          1 | simplicity |                 0
(2 rows)
```

Notice that the sentiment score for the attribute (noun) "simplicity" is not affected by having the word "simplicity" in a Pulse user-dictionary, since it has been identified as an attribute.

Additional Tuning Examples

The following table provides additional examples for tuning Pulse:.

Text	Attribute	Score	Tuning Steps
New product smashes kickstarter target in a day!	New Product	Default: -1 After Tuning: 1	"Smash" is scored negatively by default. Add "smash

Text	Attribute	Score	Tuning Steps
			target" to "pos_words".
Get a sneak peek of the new movie.	Movie	Default: -1 After Tuning: 1	"sneak" is scored negatively by default. Add "sneak peek" to "pos_words".
Google was able to spot trends in flu outbreaks in the United States using the collection and analysis of big data.	Google	Default: -1 After Tuning: 1	"outbreak" is scored negatively by default. Add "spot trend" to "pos_words".
Five health tips that will knock your socks off!	health tips	Default: -1 After tuning: 1	"knock" is scored negatively by default. Add "knock your socks off" to "pos_words".

If you have many words or base/synonyms to add to user-dictionaries, then you can bulk load the lists from text files. See [Bulk Loading Word Lists from Text Files](#).

Bulk Loading Word Lists from Text Files

If you have many words that you need to add to the user-dictionary or normalization mapping, then it may be easier to create the word lists in a text file and load the lists using the COPY command.

Bulk Loading User Dictionary Lists

To bulk load user-dictionary lists into the pulse schema, first create a text file with the list of words to add, one word per line, for each of the user-dictionaries. See [Dictionaries and Mappings](#) for a list of the user-dictionaries and normalization map. Optionally name each text file to match the name of the corresponding user-dictionary. Place these text files in the `/home/dbadmin` directory.

Then, in vsql, use one or more of the following commands to load the respective text file into the pulse schema. These commands assume that you are using English version of Pulse, that the built-in user dictionary tables in the pulse schema and that the text files are named the same as the user-dictionary.

```
copy pulse.neg_words_en(standard) from '/home/dbadmin/neg_words.txt';
copy pulse.neutral_words_en(standard) from '/home/dbadmin/neutral_words.txt';
copy pulse.pos_words_en(standard) from '/home/dbadmin/positive_words.txt';
copy pulse.stop_words_en(standard) from '/home/dbadmin/stop_words.txt';
copy pulse.white_list_en(standard) from '/home/dbadmin/white_list.txt';
```

Bulk Loading the Normalization Map

You can load normalization terms into the pulse schema similarly to loading user-dictionaries. However, instead of one word per line, use the convention of one pair of words per line, separated by a comma. For example, to map the different forms of Micro Focus to HP, create a text file in `/home/dbadmin` named `normalization.txt` with the following content:

```
hp, hewlett packard
hp, hewlett-packard
```

Then, in vsql, use the following command to load the normalization into the pulse schema.

```
copy pulse.normalization_en (standard_base, standard_synonym) from '/home/dbadmin/normalization.txt'
delimiter ',';
```

When you have finished loading the text files, run the `loadUserDictionaries.sql` script to update the new terms in memory:

```
vsql -f /opt/vertica/packages/pulse/ddl/loadUserDictionaries.sql
```

Multilingual Pulse

This section describes the multilingual features of Pulse and gives a brief explanation on how to use the `sentimentAnalysis()` functions for different supported languages.

Pulse can analyze text in different languages. Currently English and Spanish are supported. You can specify the language that is analyzed in three ways:

- Provide the language as argument: if there is a language specified in the document record, then it can be used for analyzing the text by passing it as argument. This is particularly useful when a dataset contains texts in different languages. If the language in a record is not a supported one, then it is ignored.
- Provide the language as parameter: if there is no value specified for the language for a document record, Pulse uses the value specified for the language parameter in the query to get the language.

Note: If you provide the language parameter more than once, then the last value specified is used.

- Do not provide an argument or parameter and use the default language. If the language is neither specified in the record nor by the user, then Pulse defaults to English unless you have changed the default language. To change the default language use the [SetDefaultLanguage](#) function.

Note: If you provide both an argument and a parameter, then the argument is used as the language. If the argument is not valid then the parameter is used. If neither the argument or parameter are valid then the default language is used.

Note: Accents are removed from characters in attributes. Additionally, a "u" with a dieresis is converted to a plain "u" and an "n" with a diacritical tilde is replace with a plain "n".

Functions that use language as parameter and/or as argument:

- [CommentAttributes](#)
- [ExtractSentence](#)
- [GetAllSentences](#)
- [GetSentenceCount](#)

- [PartsOfSpeech](#)
- [SentimentAnalysis](#)

Other functions can use the language only as a parameter (if not provided, the function uses the default language):

- [GetLoadedDictionary](#)
- [GetLoadedMapping](#)
- [LoadDictionary](#)
- [LoadMapping](#)
- [GetAllDictionaryWords](#)
- [GetAllMappingWords](#)

In This Section

Spanish Pulse

The only visible difference between the English and Spanish versions is in the table names for the user dictionaries. The modifications for dictionaries/mappings must be done in the following tables:

- `white_list_es`
- `stop_words_es`
- `pos_words_es`
- `neg_words_es`
- `neutral_words_es`
- `normalization_es`

Consider the text "El producto provee simplicidad" (the product provides simplicity). If the word 'simplicidad' (simplicity) should be positive, it has to be loaded into the pos_words dictionary for Spanish as follows:

```
select sentimentanalysis('El producto provee simplicidad') OVER(PARTITION BEST);

 sentence | attribute | sentiment_score
-----+-----+-----
          1 | producto  |                0
          1 | simplicidad |                0
(2 rows)

insert into pulse.pos_words_es values('simplicidad');
OUTPUT
-----
          1
(1 row)

select LoadDictionary(standard USING PARAMETERS listName='pos_words') over() from pulse.pos_words_es;
Success
-----
t
(1 row)

select sentimentanalysis('El producto provee simplicidad') OVER(PARTITION BEST);
 sentence | attribute | sentiment_score
-----+-----+-----
          1 | producto  |                1
          1 | simplicidad |                0
(2 rows)
```

Multilingual Examples

Language as an Argument

```
select sentimentanalysis('Cookies are sweet.', 'english') OVER(PARTITION BEST);
 sentence | attribute | sentiment_score
-----+-----+-----
          1 | cookies  |                1
(1 row)
```

```
select sentimentanalysis('Las galletas son dulces', 'spanish') OVER(PARTITION BEST);
 sentence | attribute | sentiment_score
-----+-----+-----
          1 | galletas |                1
(1 row)
```

The following example shows how to analyze tweets from a table where each tweet record contains the language of the tweet in addition to the text.

```

create table myTweets (text varchar(300), language varchar(15));

insert into myTweets values ('Wired reviews Amazon''s tiny-screen Kindle Fire: Web browsing sucks,
emotionally draining, makes reading a chore', 'english');

insert into myTweets values ('Cookies are sweet', 'english');

insert into myTweets values ('Why does my iPhone have 6 GB of corrupted space I can''t use? That is
obnoxious.', 'english');

insert into myTweets values ('Las galletas son dulces', 'spanish');

insert into myTweets values ('el iPhone es el celular mas popular', 'spanish');

select sentimentanalysis(text,language) OVER(PARTITION BEST) from MyTweets;

```

sentence	attribute	sentiment_score
1	reviews amazon	-1
1	kindle fire	-1
1	web	-1
1	chore	-1
1	cookies	1
1	iphone	-1
1	gb	-1
1	space	-1
1	galletas	1
1	iphone	1
1	celular	1

(11 rows)

Language as a Parameter

```

select sentimentanalysis('Las galletas son dulces' using PARAMETERS language='spanish') OVER
(PARTITION BEST);
 sentence | attribute | sentiment_score
-----+-----+-----
          1 | galletas |                1
(1 row)

select sentimentanalysis('Cookies are sweet' using PARAMETERS language='english') OVER(PARTITION
BEST);
 sentence | attribute | sentiment_score
-----+-----+-----
          1 | cookies  |                1
(1 row)

```

Although it is possible to specify the language as parameter for a specific text given in a query, using the language argument is more appropriate. The use of the language parameter is targeted to queries that analyze a set of texts (from a table) written in a same language. The language parameter is used by Pulse to skip texts in other languages because Pulse does not automatically detect the language, Thus, Pulse uses the language specified as parameter to

analyze each text from the table (consequently the sentiment scores for texts in other language may be incorrect).

The following example shows a query that analyzes tweets from a table where the tweets do not have a language value stored in the table, but are all in the same language.

```
create table myTweets (text varchar(300));

insert into myTweets values ('Las galletas son dulces');

insert into myTweets values ('el iphone es el celular mas popular');

insert into myTweets values ('el zorro rapido brinco sobre el perro flojo');

select sentimentanalysis(text using PARAMETERS language='spanish') OVER(PARTITION BEST) from
MyTweets;
```

sentence	attribute	sentiment_score
1	galletas	1
1	iphone	1
1	celular	1
1	zorro	1
1	perro	-1

(5 rows)

The following example shows a query that analyzes tweets from a table with tweets in different languages. The Spanish tweets do not have the language value. In a single query you can specify both an argument and parameter. The argument has precedence over the parameter setting. In this case the parameter is only used when a tweet doesn't provide a language value.

```
create table myTweets (doc_id int, text varchar(300), language varchar(15));

insert into myTweets values (1, 'Vertica is the best company', 'english');

insert into myTweets values (2, 'Cookies are sweet', 'english');

insert into myTweets values (3, 'The quick brown fox jumped over the lazy dog', 'english');

insert into myTweets values (4, 'Las galletas son dulces');

insert into myTweets values (5, 'el iphone es el celular mas popular');

select doc_id, sentimentanalysis(text,language using PARAMETERS language='spanish') OVER(PARTITION BY
id, text) from MyTweets;
```

doc_id	sentence	attribute	sentiment_score
1		1 vertica	1
1		1 company	1
2		1 cookies	1
3		1 fox	1
3		1 dog	-1
4		1 galletas	1

```
      5 |          1 | iphone |          1
      5 |          1 | celular |          1
(8 rows)
```

Using the Default Language

```
select sentimentanalysis('Cookies are sweet') OVER(PARTITION BEST);
 sentence | attribute | sentiment_score
-----+-----+-----
          1 | cookies   |                1
(1 row)
```

Pulse Cookbook

This section contains the following recipes for using Pulse

Batch Analyzing Data as It Is Loaded

If you are constantly loading data that needs to be analyzed with Pulse, then you should run the `sentimentAnalysis()` function in batches on the newly loaded data. You can store the sentiment scores in a separate table and associate the rows in the scored table with the original table by joining on IDs between the tables. Running `sentimentAnalysis()` as the data is loaded and storing the results is more efficient than running `sentimentAnalysis()` during interactive sessions because the `sentimentAnalysis()` can take a few seconds to return results.

For example, suppose that you are using the **Social Media Connector** (available in the *ETL and Data Ingest* section of the [Vertica Marketplace](#)) to retrieve Twitter tweets and load them into Vertica. In this case, you can create shell scripts and a cron job to automatically run `sentimentAnalysis()` on the text of the tweets. Then you can store the resulting scores in a table for quick retrieval later on.

Complete the following steps as the `dbadmin` user to run `sentimentAnalysis()` on your Twitter data. This task also sets up the system to run `sentimentAnalysis()` on new Twitter data every 2 minutes.

1. Create a table to hold the tweets (for example, named `tweets`) with the following structure:

```
create table tweets(  
  id int,  
  created_at timezonetz,  
  "user.name" varchar(144),  
  "user.screen_name" varchar(144),  
  text varchar(500),  
  "retweeted_status.retweet_count" int,  
  "retweeted_status.id" int,  
  "retweeted_status.favorite_count" int,  
  "user.location" varchar(144),  
  "coordinates.coordinates.0" float,  
  "coordinates.coordinates.1" float,  
  lang varchar(5)  
);
```

The columns are based on the data returned by Twitter's streaming API. The fields are defined in the Twitter Field Guide at <https://dev.twitter.com/docs/platform>/tweets>.

Note that the columns with quoted names; "user.name", "user.screen_name", are sub-fields within a larger field. For example, the "users" field is described here: <https://dev.twitter.com/docs/platform>/users>.

You must at least have columns for id, text, and "user.screen_name"

2. Create a table to hold the sentiment scores (for example, named : *tweet_sentiment*). Then load it with the scores from your existing tweets. Make sure no new tweets are loaded until this step completes.

Replace the column names in the following example with the column names from your twitter table. The example uses the column names used by the Social Media Connector:

```
create table tweet_sentiment as
(select id, "user.screen_name",
SentimentAnalysis(text using parameters filterlinks=true,
filterusermentions=true)
over (partition by id, "user.screen_name", text)
from tweets where lang='en' order by attribute );

-- The following table defines which data has been analyzed
create table dt_start as (select max(created_at) dt from tweets);
```

Note: If you have a large number of tweets then this command can take a long time to run. However, it is important to score your existing data before you start scoring newly loaded data.

3. Create a SQL script to update the *tweet_sentiment* table with data from newly loaded tweets. Save it in the home folder of the Vertica database admin user. For example, this path could be `/home/dbadmin/tweet_update.sql`.

Replace the column names with the column names from your twitter table. The following example uses the column names used by the Vertica Social Media Connector:

```
\i /opt/vertica/packages/pulse/ddl/loadUserDictionaries.sql
drop table if exists dt_end;
create table dt_end as (select max(created_at) dt from tweets);

-- run sentiment
insert into tweet_sentiment
(select id, "user.screen_name",
SentimentAnalysis(text using parameters filterlinks=true,
filterusermentions=true)
```

```
over (partition by id, "user.screen_name", text)
from tweets where lang='en' and
tweets.created_at > (select dt from dt_start) and
tweets.created_at <= (select dt from dt_end)
order by attribute);

-- copy date end into new start date
drop table if exists dt_start;
create table dt_start as (select dt from dt_end);

-- free up jvm resource pool memory used by this script
select release_jvm_memory();
```

4. Create a shell script named *tweet_update.sh* that is run from a cron job. This shell script runs the *tweet_update.sql* script and logs the results to the file *tweet_update.log*. Save the *tweet_update.sh* script in the home folder of the Vertica database admin user. For example, this path could be */home/dbadmin/tweet_update.sh*.

Replace the *dbadmin*, *password*, and *databasename* values with the values for your system.

```
/opt/vertica/bin/vsql -U dbadmin -w password -d databasename -f /home/dbadmin/tweet_update.sql >
tweet_update.log
```

After you have created the shell script *tweet_update.sh*, make the script executable by entering the following command: `chmod +x tweet_update.sh`.

5. Create a cron job to run the script every two minutes. Use the command `crontab -e` to create the cron job. You can view all of your created cron jobs by using the command `crontab -l`.

```
*/2 * * * * /home/dbadmin/tweet_update.sh
```

The script runs every two minutes. Any new tweets that have been loaded in that two-minute window are analyzed and the results are added to the *tweet_sentiment* table. You can join results of queries by the id's of the *tweets* and *tweet_sentiment* tables.

Analyzing Comments for a Company or Product

Pulse allows you to analyze comments (such as tweets) for a particular company or product.

For example, imagine that the fictional company *Pytell Corp* has just released a new product called *Owl-2*. You want to analyze the sentiment of both the company and the product.

You've collected several tweets from Twitter about several companies and products into your database. However, for this analysis you only want to target tweets that have to do with *Pytell Corp* and/or *Owl-2*.

The dataset for this example is below:

```
create table tweets_sample(id int, author varchar(50), text varchar(400));

insert into tweets_sample values(400900, 'DramaBugs',
'Pytell Corp has horrible customer support. On Hold 2 hours!');
insert into tweets_sample values(401200, 'Gemball',
'Owl-2 doesn't fly!');
insert into tweets_sample values(403070, 'Postta',
'Pytell finally released Owl-2!');
insert into tweets_sample values(480920, 'Instana',
'Unboxing Owl-2 after work today! Stay Tuned!');
insert into tweets_sample values(434500, 'Dailydant',
'Owl-2 flies great! I like it!');
insert into tweets_sample values(450670, 'HelpfulBen',
'Owl-2 keeps crashing into things!');
insert into tweets_sample values(402092, 'Championtips',
'Owl-2 has solved our rodent infestation!');
insert into tweets_sample values(434950, 'Editone',
'Pytell fail? Reports of Owl-2 crashing through windows. ');
insert into tweets_sample values(413956, 'CzarLatest',
'Pytell Corp's Owl-2 just released!');
insert into tweets_sample values(459988, 'CelticMiss', 'I like Ponies!');
insert into tweets_sample values(403511, 'BuffDrama',
'I am afraid of small spiders. ');
commit;
```

1. Run `SentimentAnalysis` to get an idea of how Pulse is analyzing the data:

```
SELECT author, SentimentAnalysis(text) OVER(PARTITION BY author, text) FROM tweets_sample ORDER BY attribute;
```

author	sentence	attribute	sentiment_score
-----	-----	-----	-----

DramaBugs	1	customer support	-1
Championtips	1	owl-2	0
HelpfulBen	1	owl-2	-1
Instana	1	owl-2	1
CzarLatest	1	owl-2	0
Gemball	1	owl-2	0
Postta	1	owl-2	0
Dailydant	1	owl-2	1
Editone	2	owl-2	-1
CelticMiss	1	ponies	1
Editone	2	reports	-1
Championtips	1	rodent infestation	0
BuffDrama	1	spiders	-1
Instana	2	tuned	0
Editone	1	Pytell	-1
Postta	1	Pytell	0
CzarLatest	1	Pytell corp	0
DramaBugs	1	Pytell corp	-1
Editone	2	windows	-1
Instana	1	work today	0
(20 rows)			

- There are some attributes listed (ponies!) that do not apply to the analysis that you are doing. You can focus your analysis by adding whitelist entries and filtering on the whitelist. Insert whitelist entries for the company and product name into the standard whitelist:

```
INSERT INTO pulse.white_list_en VALUES ('Pytell Corp');
INSERT INTO pulse.white_list_en VALUES ('owl-2');
commit;
```

Reload the whitelist into Pulse. Loading a user-dictionary or mapping overwrites the existing user-dictionary or mapping:

```
SELECT LoadDictionary(standard USING PARAMETERS listName='white_list') OVER() FROM pulse.white_list_en;
```

- Also, note that Pulse is not identifying all variations on the company name. There are also three obvious attributes for the product name ('Pytell', 'pytell corp). You can normalize these values by using a normalization mapping. Add the synonyms to the standard normalization mapping:

```
insert into pulse.normalization_en values('Pytell', 'Pytell Corp');
commit;
```

- Reload the normalization mapping to load the new values into Pulse:

```
SELECT LoadMapping(standard_base, standard_synonym USING PARAMETERS mapName='normalization')  
OVER() FROM pulse.normalization_en;
```

5. Run the query again to see how the normalization affects the results.

Note that 'pytell corp' has been normalized to 'pytell' and Pulse is correctly identifying the synonyms and mapping them to the base term

Determining Popular Topics

The next examples in this cookbook use a table with the following structure:

```
create table tweets(  
  id int,  
  created_at timestamptz,  
  "user.name" varchar(144),  
  "user.screen_name" varchar(144),  
  text varchar(500),  
  "retweeted_status.retweet_count" int,  
  "retweeted_status.id" int,  
  "retweeted_status.favorite_count" int,  
  "user.location" varchar(144),  
  "coordinates.coordinates.0" float,  
  "coordinates.coordinates.1" float,  
  lang varchar(5)  
);
```

The columns are based on the data returned by Twitter's streaming API. The fields are defined in the Twitter Field Guide at <https://dev.twitter.com/docs/platform/tweets>.

Note that the columns with quoted names; "user.name", "user.screen_name", are sub-fields within a larger field. For example, the "users" field is described here:

<https://dev.twitter.com/docs/platform/users>.

The example queries provided work with any Twitter data that follows the above table structure.

Determining Popular Topics

The Pulse attribute discovery feature allows you to easily find popular topics in a data set. Use the `CommentAttributes()` function to extract the attributes from rows of text and count the number of times the attribute occurs.

For example, using a dataset of 30,000 tweets that matched a keyword of "D11" collected during the [D11 tech conference](#) in 2013, you could get a count of the attributes discovered by Pulse to determine popular topics:

```
SELECT t.attribute, count(*) FROM(SELECT CommentAttributes(text)  
OVER(PARTITION BEST) FROM tweets) as t  
GROUP BY t.attribute ORDER BY count(*) DESC LIMIT 10;
```

```
attribute | count  
-----+-----
```

```
http          | 3631
d11           | 3281
rt            | 2453
encryption    | 2356
usb           | 2121
aes-256       | 1859
smartphones   | 1843
rt @hp        | 1788
world         | 1609
ceo           | 1520
(10 rows)
```

If the dataset contains tweets in English and Spanish languages, then (using the Pulse multilingual version) each tweet can be analyzed according to its language by specifying the language as argument in the `CommentAttributes()` function. If the language of a specific tweet is not supported, then that tweet is ignored by the function. For example:

```
SELECT t.attribute, count(*) FROM(SELECT CommentAttributes(text,lang)
OVER(PARTITION BEST) FROM tweets) as t
GROUP BY t.attribute ORDER BY count(*) DESC LIMIT 10;
```

Notice that the top attribute is "http". This is due to the large number of links in tweets. You can ignore links by using the `filterlinks` argument of `CommentAttributes()`:

```
SELECT t.attribute, count(*) FROM
(SELECT CommentAttributes(text USING PARAMETERS filterlinks=true)
OVER(PARTITION BEST) FROM tweets) as t
GROUP BY t.attribute ORDER BY count(*) DESC LIMIT 10;
```

```
attribute | count
-----+-----
d11       | 4757
rt        | 2397
encryption | 2356
usb       | 2121
aes-256   | 1871
smartphones | 1829
rt @hp    | 1788
world     | 1611
ceo       | 1542
interview | 1346
(10 rows)
```

The attribute "http" is now gone from the list, but we still have "rt" (for retweet) on the list and it is not helpful in this context. You can omit terms such as "rt" by adding them to the `stop_words` list and reloading the `stop_words` user-dictionary:

```
INSERT INTO pulse.stop_words_en VALUES('rt');
commit;
SELECT LoadDictionary(standard USING PARAMETERS
listName='stop_words') OVER() FROM pulse.stop_words_en;
```

When you rerun the query you get more accurate results for the popular topics in the data set:

```
SELECT t.attribute, count(*) FROM  
(SELECT CommentAttributes(text USING PARAMETERS filterlinks=true)  
OVER(PARTITION BEST) FROM tweets) as t  
GROUP BY t.attribute  
ORDER BY count(*) DESC LIMIT 10;
```

attribute	count
d11	4757
encryption	2356
perfume	2121
usb	1871
aes-256	1829
rt @hp	1788
world	1611
ceo	1542
interview	1346
cloud	1306

(10 rows)

You can further refine the list to topics that contain specific attributes by adding the attributes in which you are interested to the `white_list`, and then filtering with the `whitelist` parameter:

```
SELECT t.attribute, count(*) FROM  
(SELECT CommentAttributes(text USING PARAMETERS filterlinks=true,  
whitelistonly=true) OVER(PARTITION BEST) FROM tweets) as t  
GROUP BY t.attribute  
ORDER BY count(*) DESC LIMIT 10;
```

Determining The Sentiment of Popular Topics

In addition to finding popular, or most discussed, topics in your data set, you can also easily get an average sentiment for the topics.

The following example uses a dataset of 10,000 tweets containing the hashtag #sports.

```
SELECT * from  
(SELECT attribute, count(attribute) AS  
cnt, AVG(sentiment_score) FROM (select  
SentimentAnalysis(text USING PARAMETERS  
filterlinks=true) OVER(PARTITION BEST) from tweets)  
AS t1 GROUP BY attribute ORDER BY  
AVG(sentiment_score) desc) AS t2  
WHERE t2.cnt > 500  
LIMIT 5;
```

The result shows the top 5 tweets with the highest average sentiment for attributes that have 500 or more occurrences:

attribute	cnt	avg
-----------	-----	-----

football		817		0.290085679314565
game		638		0.134796238244514
baseball		1558		0.128369704749679
basketball		776		0.114690721649485
hockey		2610		0.113409961685824

Determining Prolific Authors

You can identify prolific authors of your textual data without using any of the Pulse functions. For example, using the same dataset as the examples in [Determining Popular Topics](#), you can easily determine how many tweets were made by authors:

```
select "user.name", count(*) as post_count from tweets group by  
"user.name" order by count(*) DESC limit 10;
```

user.name	post_count
Nick Cicero	182
Networked Society	171
AllThingsD	137
Stephanie~	117
Jennifer Ives	105
Claudia-ElasticMinds	101
Needful Things	96
Poptart Tech	85
Patrick Bertrand	84
Alessandro Piol	81

(10 rows)

Analyzing the Sentiment of Specific Authors

You can use the `white_list` feature of `SentimentAnalysis()` to filter the attributes so only the `white_list` terms are returned. You can combine the `white_list` with a query for a list of specific authors to narrow down the results to a specific subset of authors.

Using the same `tweet_samples` table in [Analyzing Comments for a Company or Product](#), add the following sample tweets:

```
INSERT INTO tweets_sample VALUES('123', 'bcook',  
'The hyperdrive is a great machine.');
```

```
INSERT INTO tweets_sample VALUES('124', 'sprock',  
'The hyperdrive is a pinnacle of technology.');
```

```
INSERT INTO tweets_sample VALUES('125', 'tgates',  
'What is a hyperdrive?');
```

```
INSERT INTO tweets_sample VALUES('126', 'bcook', 'Roses are red.');
```

```
INSERT INTO tweets_sample VALUES('127', 'sprock',  
'Energy equals mass times the speed of light squared.');
```

```
INSERT INTO tweets_sample VALUES('128', 'tgates', 'Violets are blue.');
```

```
commit;
```

Create an `authors` table to hold the names of the authors whose sentiment you want to analyze:

```
CREATE TABLE authors (name VARCHAR, screenname VARCHAR);
```

Then insert the following authors:

```
INSERT INTO authors VALUES('Brian Cook','bcook');
```

```
INSERT INTO authors VALUES('Tom Gates', 'tgates');
```

```
INSERT INTO authors VALUES('Jim Sprock', 'sprock');
```

```
commit;
```

Add the word 'hyperdrive' to your existing `white_list` and reload the `white_list` user-dictionary:

```
INSERT INTO pulse.white_list_en VALUES('hyperdrive');
```

```
SELECT LoadDictionary(standard USING PARAMETERS  
listName='white_list') OVER() FROM pulse.white_list_en;
```

Then, you can run a query that filters on authors and the `white_list` and provides you with a sentiment score and the content of the analyzed text:

```
SELECT t1.id, t1.author, t1.attribute, t1.sentiment_score, t2.text from (SELECT id, author,  
SentimentAnalysis(text USING PARAMETERS  
whitelistonly=true) OVER (PARTITION BY id, author) FROM tweets_sample  
WHERE author IN (SELECT screenname FROM authors)) AS t1 JOIN (SELECT id,  
text FROM tweets_sample) AS t2 ON t1.id = t2.id ;
```

```
id | author | attribute | sentiment_score | text
-----+-----+-----+-----+-----
123 | bcook | hyperdrive | 1 | The hyperdrive is a great
124 | sprock | hyperdrive | 1 | The hyperdrive is a pinnacle
125 | tgates | hyperdrive | 0 | What is a hyperdrive?
(3 rows)
```

Finding Associated Attributes

Once you've analyzed your tweets and stored them in a table (see [Batch Analyzing Data as It Is Loaded](#)) you can use the analyzed data to make quick comparisons, such as finding attributes most associated with another attribute.

For example, if your primary attribute is 'microsoft', you may want to determine which other attributes are used most often with the word 'microsoft' in the same tweet. This can be accomplished with the following SQL:

```
select t1.attribute, count(*), avg(t1.sentiment_score) from tweet_sentiment t1,  
tweet_sentiment t2 where t1.id=t2.id and not t1.attribute=t2.attribute and  
t2.attribute = 'microsoft' group by t1.attribute order by count desc limit 5;
```

We get the following results from a data set of 25,000 PC Manufacturer tweets:

attribute	count	avg
windows phone	81	0.0238095238095238
power data center	77	0.58974358974359
wind project	77	0
investment	73	0
windows	57	0.175438596491228

The query allows you to gain additional insight into the scope of an attribute and may aid in determining the context of why a certain attribute it scored a certain way.

Using Pulse as an Aid in Competitive Analysis

This topic details how you can use Pulse to conduct basic competitive analysis for products or brands. Pulse makes basic competitive analysis simple through use of its white list feature. By utilizing the white list feature, you can analyze the tweets that pertain only to the brands or products that you are evaluating.

For example, say you wanted to analyze the sentiment of major food brands to determine how the brands compared to each other and what words people associate (positively and negatively) about the brands. Your work flow to do this analysis with Twitter and Vertica Pulse could be as follows:

1. Start collecting tweets based on the brands or products that you are following. For example, you can use the Social Media Connector (available on the Pulse [marketplace](#)) to collect tweets matching keywords.
2. First, create a `white_list` that contains the same keywords as the tweets that you are collecting. The whitelist allows you to later group and filter tweets collected. For example:

```
insert into pulse.white_list_en values ('productA');
insert into pulse.white_list_en values ('productB');
insert into pulse.white_list_en values ('productC');
\i /opt/vertica/packages/pulse/ddl/loadUserDictionaries.sql
```

3. [Batch Load Tweets](#), and be sure to specify `whitelistonly=true` and `relatedwords=true` in the `SentimentAnalysis()` function. This creates a table with the sentiment score for your white-listed attributes. Note that this should be done in batches for large data sets. For smaller data sets (depending on your hardware) you can try and analyze all the tweets at once. For example:

```
create table tweet_sentiment as
(select id, "user.screen_name",
SentimentAnalysis(text using parameters filterlinks=true,
filterusermentions=true, relatedwords=true,
filterretweets=true, whitelistingonly=true)
over (partition by id, "user.screen_name", text)
from tweets where lang='en' order by attribute );
```

4. Verify that your `tweet_sentiment` table contains only your whitelist attributes. The following query should only return the brands/products that you have white listed. For example:

```
=> select distinct(attribute) from tweet_sentiment;

 attribute
-----
ProductA
ProductB
ProductC
(3 rows)
```

5. You can get a basic idea of which product or brand is being talked about the most by seeing how many instances of each attribute appear in your data set:

```
=> select attribute, count(*) from tweet_sentiment group by (attribute) order by count(*) desc;
 attribute | count
-----+-----
ProductA  |    701
ProductB  |    192
ProductC  |     52
(3 rows)
```

You can see that ProductA is the most talked about product of three being analyzed over the time-frame that the tweets were collected.

6. Determine the average sentiment scores of the tweets you have collected:

```
=> select attribute, avg(sentiment_score) as score from tweet_sentiment group by (attribute)
order by score DESC;

 attribute |          score
-----+-----
ProductC  |  0.192307692307692
ProductB  | -0.0729166666666667
ProductA  | -0.122681883024251
(3 rows)
```

From this basic analysis, you can see that ProductC has the most positive sentiment from the three brands being analyzed over the time period when the tweets were collected, and ProductA has the lowest sentiment.

7. You can also determine which words or phrases are associated with each attribute in their positive and negative contexts. For example, to see the list of words that are most

associated with positive sentiment for ProductC, you can look at the related words fields and add up the occurrences of words associated with positive sentiment:

```
=> select count(*), related_word_1 from tweet_sentiment where attribute = 'ProductC' and sentiment_score > 0 group by related_word_1 order by count DESC;
```

```
count | related_word_1
-----+-----
    11 | delicious
     2 | love
     1 | best
     1 | bless
     1 | good
     1 | work
(6 rows)
```

You can also do the same for negative sentiment:

```
=> select count(*), related_word_1 from tweet_sentiment where attribute = 'ProductC' and sentiment_score < 0 group by related_word_1 order by count DESC;
```

```
count | related_word_1
-----+-----
     1 | working
     1 | dragging
     1 | bad
     1 | doomed
     1 | loud
     1 | stressful
     1 | damn
(7 rows)
```

8. Finally, Pulse makes it easy to see other attributes associated with your target attributes to help you better understand the context in which people are discussing the brands or products that you are analyzing.

a. Create another sentiment table from your data, but this time omit the `whitelistonly` and `relatedwords` parameters:

```
create table tweet2_sentiment as
(select id, "user.screen_name",
SentimentAnalysis(text using parameters filterlinks=true,
filterusermentions=true, filterretweets=true)
over (partition by id, "user.screen_name", text)
from tweets where lang='en' order by attribute );
```

b. Next, query the tweets that contain your target attribute and find all the other attributes associated with those tweets. Display a count of the top 5 attributes (not

including the target attribute):

```
=> select count(attribute), attribute from tweet2_sentiment where id in (select id from
tweet_sentiment where attribute = 'ProductC') and attribute <> 'ProductC' group by
(attribute) order by count(attribute) DESC limit 5;
count | attribute
-----+-----
    13 | bbq
    11 | state
    11 | sandwich
    11 | steak
     3 | ProductB
(5 rows)
```

As you can see, a few basic queries can tell you the general sentiment differences between multiple brands or products. You can also determine which words are contributing to the sentiment of each product/brand that you are analyzing and which other attributes people are talking about when they mention the brand or product(s) that you are analyzing.

You could further refine these queries by breaking out different geographic locations or time of day by joining the IDs of the tweet_sentiment table back to the main tweets table and filtering by location or time.

Pulse Function Reference

LoadDictionary

Lists words from a Pulse user-defined dictionary into memory for use by sentimentAnalysis() and other Pulse functions.

This function must be used with the OVER() clause.

For more information on Pulse user-defined dictionaries, see [Dictionaries and Mappings](#).

Syntax

```
SELECT LoadDictionary(word USING PARAMETERS listName='Listname' [, language='Lang'] [, label='Label'])  
OVER() FROM table;
```

Parameters

Argument	Description
<i>word</i>	A column of words to assign to a user-dictionary list. The column name must match the value of word.
listName	The user-dictionary list from which to load the values from <i>word</i> . Valid values: <ul style="list-style-type: none">• pos_words• neg_words• neutral_words• stop_words• white_list See Dictionaries and Mappings for details on each list type.
language	The language of the dictionary: <ul style="list-style-type: none">• 'english' or 'en'

Argument	Description
	<ul style="list-style-type: none">'spanish' or 'es'
label	The label that you want to assign to the dictionary.
table	The specified table from which values are loaded.

Examples

```
SELECT LoadDictionary(standard USING PARAMETERS listName=
'neg_words_en') OVER() from pulse.neg_words_en;

SELECT LoadDictionary(standard USING PARAMETERS listName=
'pos_words_en') OVER() from pulse.pos_words_en;

SELECT LoadDictionary(standard USING PARAMETERS listName=
'pos_words_en', language='english') OVER() from pulse.pos_words_en;

SELECT LoadDictionary(standard USING PARAMETERS listName=
'pos_words_es', language='spanish') OVER() from pulse.pos_words_es;

SELECT LoadDictionary(standard USING PARAMETERS listName=
'neg_words',label='custom_negatives') OVER() from pulse.neg_words_en;
```

See Also

- [LoadMapping\(\)](#)
- [GetLoadedDictionary\(\)](#)
- [GetStorage\(\)](#)

LoadMapping

Loads a Pulse user-mapping into memory for use by `sentimentAnalysis()` and other Pulse functions.

This function must be used with the `OVER()` clause.

For more information on Pulse user-mappings, see [Dictionaries and Mappings](#).

Syntax

```
SELECT LoadMapping(base, wordToMap USING PARAMETERS mapName='mapName' [, language='Lang'][,  
label='label']) OVER() FROM table;
```

Parameters

Argument	Description
<code>base</code>	A column of base words to assign to a mapped word. The column name must match the value of <code>base</code> .
<code>wordToMap</code>	A column of words to map to the base word in the same row. The column name must match the value of <code>wordToMap</code> .
<code>mapName</code>	The mapping to load the words into. Valid values: <ul style="list-style-type: none"><code>irregular_verbs</code> — list of conjugations of verbs and their bases.<code>normalization</code> — list of synonyms and their base word.
<code>language</code>	The language of the dictionary: <ul style="list-style-type: none"><code>'english'</code> or <code>'en'</code><code>'spanish'</code> or <code>'es'</code>
<code>label</code>	The label of the mapping that you want to load. If you do not provide a label, Pulse uses the default mapping.
<code>table</code>	The specified table from which values are loaded.

Examples

```
SELECT LoadMapping(standard_base, standard_synonym USING PARAMETERS
mapName='normalization') OVER() from pulse.normalization_en;

SELECT LoadMapping(standard_base, standard_synonym USING PARAMETERS
mapName='normalization', language='english') OVER() from pulse.normalization_en;

SELECT LoadMapping(standard_base, standard_synonym USING PARAMETERS
mapName='normalization', language='spanish') OVER() from pulse.normalization_es;
```

See Also

- [LoadDictionary\(\)](#)
- [GetLoadedMapping\(\)](#)
- [GetStorage\(\)](#)

SentimentAnalysis

Provides a sentiment score for each attribute (noun) in a given body of text. Positive sentiment receives a positive integer score and negative sentiment receives a negative integer score. A score of 0 indicates that the sentiment for the attribute is neutral.

This function must be used with the `OVER()` clause. Use `OVER(PARTITION BEST)` for the best performance if the query does not require specific columns in the `OVER()` clause. Any valid `PARTITION BY` clause is acceptable. However, only the `PARTITION BY` clause which matches the segmentation clause of the table's projection provides optimum performance. You can improve performance by segmenting on the columns in the `PARTITION BY` clause.

Syntax

```
SentimentAnalysis(text [, 'Language'] [ USING PARAMETERS  
[ whitelistonly = boolean ]  
[, filterlinks = boolean ]  
[, filterusermentions = boolean ]  
[, filterhashtags = boolean ]  
[, filterpunctuation = boolean ]  
[, filterretweets = boolean ]  
[, relatedwords = boolean ]  
[, adjustcasing = boolean ]  
[, language = string ]  
[, label='Label']  
[, granularity='ASD']  
[, actionPattern='boolean']  
)
```

Note: language can be specified as an argument and/or as a parameter. When specified as both, the argument value supersedes the parameter value.

Parameters

Argument	Description
text	The text to analyze. Limited to 65,000 bytes.
whitelistonly	Optional. Default false. When set to true only attributes defined in the whitelist user-dictionary are scored. Use this setting to limit your analysis to the objects of action patterns .

Argument	Description
filterlinks	Optional. Default false. When set to true, links are not included as attributes.
filterusermentions	Optional. Default false. When set to true, Twitter user mentions (@username) are not included as attributes.
filterhashtags	Optional. Default false. When set to true, Twitter hashtags (#hashtag) are not included as attributes.
filterpunctuation	Optional. Default true. Filters any punctuation that occurs at the beginning of an attribute other than @ and #.
filterretweets	Optional. Defaults to false. Filters out the characters "RT" from re-tweets in attributes.
relatedwords	Optional. Defaults to false. When set to true, provides up to three words from the sentence used to help determine the sentiment of the attribute.
adjustcasing	Optional. Defaults to false. When set to true, all letters in the text are converted to uppercase before sentence detection. After performing sentence detection, Vertica converts all letter to lowercase. This option can help you in cases where the original data is all in lowercase letters and Pulse is incorrectly identifying sentence boundaries.
language	The language: <ul style="list-style-type: none">• 'english' or 'en'• 'spanish' or 'es'
label	Optional. The label of the dictionaries that you want to use for sentiment analysis. If you do not include a label, Pulse uses the default dictionaries.
granularity	Optional. The level of the sentiment analysis that you want to perform: <ul style="list-style-type: none">• A — Attribute level analysis• S — Sentence level analysis

Argument	Description
	<ul style="list-style-type: none"> D — Document level analysis <p>You can specify any granularity level or combination of levels with your sentiment analysis. If you do not specify a granularity level, Pulse performs an attribute level analysis.</p>
actionPattern	Optional. Default false. When set to true checks for action patterns in the analyzed content.

Examples

These examples show various ways you can use Pulse to detect user sentiment.

Query for sentiment in the following sentence.

```
SELECT SentimentAnalysis('The quick brown fox jumped over the lazy dog.') OVER(PARTITION BEST);
```

```

sentence | attribute | sentiment score
-----+-----+-----
      1 | fox      |           1

PartsOfSpeech

Tags the words in one or more sentences with their part of speech classification, using Penn Treebank parts of speech tags.

Syntax

```
SELECT PartsOfSpeech('sentences'[, language='Lang'] [using PARAMETERS [ language='Lang'] [, adjustcasing=boolean]) OVER(PARTITION BEST);
```

Parameters

Argument	Description
<i>sentences</i>	One or more sentences to be tagged with parts of speech markup.
language	The language: <ul style="list-style-type: none">'<i>english</i>' or '<i>en</i>''<i>spanish</i>' or '<i>es</i>'
adjustcasing	Optional. Defaults to false. When set to true, all letters in the text are converted to uppercase before sentence detection. After performing sentence detection, Vertica converts all letter to lowercase. This option can help you in cases where the original data is all in lowercase letters and Pulse is incorrectly identifying sentence boundaries.

Notes

- This function returns a part of speech markup for each word. The markup used is the [Penn Treebank Project Parts of Speech Tags](#) while for Spanish the [Parole Reduced Tagset](#) is used.
- This function must be used with the `over()` clause. Use with `OVER(PARTITION BEST)` for the best performance if the query does not require specific columns in the `over()` clause.

Examples

```
select partsOfSpeech('The quick brown fox jumped over the lazy dog.') OVER(PARTITION BEST);
sentence | token | part_of_speech
-----+-----+-----
1 | the | DT
1 | quick | JJ
1 | brown | JJ
1 | fox | NN
1 | jumped | VBD
1 | over | IN
1 | the | DT
1 | lazy | JJ
1 | dog | NN
1 | . | .
(10 rows)
```

```
select partsOfSpeech('Every good boy deserves fudge.') OVER(PARTITION BEST);
sentence | token | part_of_speech
-----+-----+-----
1 | every | DT
1 | good | JJ
1 | boy | NN
1 | deserves | VBZ
1 | fudge | NN
1 | . | .
(6 rows)
```

```
select partsOfSpeech('The quick brown fox jumped over the lazy dog.', 'english')
OVER(PARTITION BEST);
```

```
sentence | token | part_of_speech
-----+-----+-----
1 | the | DT
1 | quick | JJ
1 | brown | JJ
1 | fox | NN
1 | jumped | VBD
1 | over | IN
1 | the | DT
1 | lazy | JJ
1 | dog | NN
1 | . | .
(10 rows)
```

```

GetAllDictionarySetLabels

Lists all the dictionary labels that are loaded into the current Pulse session. This function shows you which labels are currently in use. You can load only one dictionary of each type in a single session.

Syntax

```
SELECT GetAllDictionarySetLabels() OVER();
```

Examples

```
SELECT GetAllDictionarySetLables() OVER();
  label
-----
default
sports_teams
(2 rows)
```

GetAllDictionaryWords

Lists all dictionary words that are currently loaded into Pulse. This function can help you determine which user-defined words in a sentence might be affecting the sentiment score of an attribute.

Syntax

```
SELECT GetAllDictionaryWords([using PARAMETERS language='Language'[, label='Label']] OVER());
```

Parameters

Argument	Description
language	The language of the dictionary: <ul style="list-style-type: none">'english' or 'en''spanish' or 'es'
label	The label of the dictionaries that you want to list. If you do not provide a label, Pulse uses the default dictionaries.

Examples

```
SELECT GetAllDictionaryWords() OVER();
dictionary | word
-----+-----
neg_words  | ratchet
neg_words  | squirelly

select GetAllDictionaryWords(using parameters language='english') over();
dictionary | word
-----+-----
pos_words_en | simplicity
(1 row)

select GetAllDictionaryWords(using parameters label='music') over();
dictionary | word
```

```
-----+-----  
white_list_en | classical  
white_list_en | popular  
white_list_en | rock  
(3 rows)
```

- [GetAllMappingWords\(\)](#)

GetAllLoadedDictionaries

Lists all the dictionaries and dictionary labels that are loaded into the current Pulse session. This function shows you which dictionaries are determining the sentiment score of an attribute. Only one dictionary of each type can be loaded in a single session.

Syntax

```
SELECT GetAllLoadedDictionaries() OVER();
```

Examples

```
SELECT GetAllLoadedDictionaries() OVER();
```

dictionary	label
neg_words_en	default
stop_words_es	default
neutral_words_es	default
white_list_en	default
normalization_en	default
pos_words_es	default
neg_words_es	default
pos_words_en	default
white_list_es	default
neutral_words_en	default
stop_words_en	default
normalization_es	default

(12 rows)

GetAllMappingWords

Lists all user-defined bases and synonyms that are currently loaded into Pulse. This function helps you determine which user-defined mappings in a sentence might be affecting the sentiment score of an attribute.

Syntax

```
SELECT GetAllMappingWords([using PARAMETERS language='Language' ][, label='Label']) OVER();
```

Parameters

Argument	Description
language	The language of the dictionary: <ul style="list-style-type: none">'english' or 'en''spanish' or 'es'
label	The label of the mappings that you want to list. If you do not provide a lable, Pulse uses the default dictionaries.

Examples

```
SELECT GetAllMappingWords() OVER() limit 10;
 mapping | key | value
-----+-----+-----
normalization | hp | hewlett packard
normalization | hp | hewlett-packard
normalization | companycorp | company-corp
normalization | companycorp | companycorps
normalization | companycorp | companycorp's
normalization | producthd | product hd
normalization | producthd | product-hd
normalization | companycorp | company corp
(8 rows)
```

```
select getAllMappingWords(using parameters language='english') over();
      mapping      | key |      value
-----+-----+-----
normalization_en  | hp  | hewlett-packard
normalization_en  | hp  | hewlett Packard
(2 rows)

select getAllMappingWords(using parameters language='spanish') over();
      mapping      | key |      value
-----+-----+-----
normalization_es  | hidalgo | miguel hidalgo
(1 row)
```

- [GetAllDictionaryWords\(\)](#)

CommentAttributes

Retrieves the attributes (nouns) from a given piece of text.

Syntax

```
CommentAttributes(text[,Language][ USING PARAMETERS  
[ whitelistonly = boolean ]  
[, filterlinks = boolean ]  
[, filterusermentions = boolean ]  
[, filterhashtags = boolean ]  
[, filterpunctuation = boolean ]  
[, filterretweets = boolean ]  
[, adjustcasing = boolean ]  
[, language = string ]])  
])
```

Parameters

Argument	Description
text	The text from which to extract the attributes.
language	The language: <ul style="list-style-type: none">• 'english' or 'en'• 'spanish' or 'es'
whitelistonly	Optional. Default false. When set to true only attributes defined in the white_list user-dictionary are returned.
filterlinks	Optional. Default false. When set to true, links are not set as attributes.
filterusermentions	Optional. Default false. When set to true, Twitter usernames (@username) are not set as attributes.
filterhashtags	Optional. Default false. When set to true, removes the following from tweets: <ul style="list-style-type: none">• hashtag symbols - For example, #pizza becomes pizza.

Argument	Description
	<ul style="list-style-type: none">• @mentions - For example, Vertica would remove @NewYorkCity from a tweet.• Link URLs
filterpunctuation	Optional. Default true. Filters any punctuation that occurs at the beginning of an attribute other than @ and #.
filterretweets	Optional. Defaults to false. Filters out the characters "RT" from re-tweets in attributes.
adjustcasing	Optional. Defaults to false. When set to true, all letters in the sentence are converted to upper-case before sentence detection. After sentence detection all letters are converted to lower-case. This option is helpful if the original data is all in lower-case and Pulse is incorrectly identifying parts of speech in the sentence.

Notes

- The text argument is limited to 65,000 bytes.
- This function must be used with the `over()` clause. Use with `OVER(PARTITION BEST)` for the best performance if the query does not require specific columns in the `over()` clause.
- *language* can be specified as an argument and/or as a parameter where the argument value supersedes the parameter value.

Examples

```
select CommentAttributes('The quick brown fox jumped over the lazy dog. All good boys deserve fudge.') OVER(PARTITION BEST);
sentence | attribute
-----+-----
1 | fox
1 | dog
2 | boys
2 | fudge
(4 rows)
```

```
select commentattributes('the quick brown fox jumped over the lazy dog. All good boys deserve fudge', 'english') over();
```

```
sentence | attribute
-----+-----
      1 | fox
      1 | dog
      2 | boys
      2 | fudge
(4 rows)
```

```
select commentattributes('the quick brown fox jumped over the lazy dog. All good boys deserve fudge'
using parameters language='english') over();
```

```
sentence | attribute
-----+-----
      1 | fox
      1 | dog
      2 | boys
      2 | fudge
```

```
select commentattributes('el zorro rapido brinco sobre el perro flojo. Todos los chicos buenos
merecen un premio'
```

```
, 'spanish') over();
sentence | attribute
-----+-----
      1 | zorro
      1 | perro
      2 | chicos
      2 | premio
(4 rows)
```

```
select commentattributes('el zorro rapido brinco sobre el perro flojo. Todos los chicos buenos
merecen un premio'
```

```
using PARAMETERS language='spanish') over();
```

```
sentence | attribute
-----+-----
      1 | zorro
      1 | perro
      2 | chicos
      2 | premio
(4 rows)
```

Filtering User-mentions

```
SELECT CommentAttributes('@user is always late. He kept me waiting 20 minutes last weekend.'
USING PARAMETERS filterusermentions=true) OVER(PARTITION BEST);
```

```
sentence | attribute
-----+-----
      2 | weekend
(1 row)
```

GetSentenceCount

Returns the number of sentences in a body of text. You can use this function to count the number of sentences in a long piece of text. It is also useful if you are programmatically using the [ExtractSentence](#) function and need to know the number of sentences in a piece of text.

Syntax

```
select GetSentenceCount(text [, Language] [ USING PARAMETERS
[ filterlinks = boolean ]
[, filterusermentions = boolean ]
[, filterhashtags = boolean ]
[, adjustcasing = boolean ]
[, language = string ]
])
```

Parameters

Argument	Description
text	The text from which to extract the number of sentences. Currently English and Spanish language text are supported for analysis.
language	The language: <ul style="list-style-type: none">'<i>english</i>' or '<i>en</i>''<i>spanish</i>' or '<i>es</i>'
filterlinks	Optional. Default false. When set to true, sentences that are only links are not counted as a sentence.
filterusermentions	Optional. Default false. When set to true, sentences that are only Twitter user mentions (@username) are not counted as a sentence.
filterhashtags	Optional. Default false. When set to true, sentences that are only Twitter hashtags (#hashtag) are not counted as a sentence.
adjustcasing	Optional. Defaults to false. When set to true, all letters in the sentence are converted to upper-case before sentence detection.

Argument	Description
	After sentence detection all letters are converted to lower-case. This option is helpful if the original data is all in lower-case and Pulse is incorrectly identifying parts of speech in the sentence.

Notes

- The text argument is limited to 65,000 bytes.
- This function must be used with the `over()` clause. Use with `OVER(PARTITION BEST)` for the best performance if the query does not require specific columns in the `over()` clause.
- *language* can be specified as an argument and/or as a parameter where the argument value supersedes the parameter value.

ExtractSentence

Returns the specified sentence from a body of text.

Syntax

```
ExtractSentence(text, sentence [, Language] [USING PARAMETERS  
[ filterlinks = boolean ]  
[, filterusermentions = boolean ]  
[, filterhashtags = boolean ]  
[, adjustcasing = boolean ]  
[, language = string ]  
)
```

Parameters

Argument	Description
text	The text containing the sentence to extract.
language	The language: <ul style="list-style-type: none">• '<i>english</i>' or '<i>en</i>'• '<i>spanish</i>' or '<i>es</i>'
sentence	Integer value. The number of the sentence in the text .
filterlinks	Optional. Default false. When set to true, sentences that are only links are skipped over and ignored. Any links in a sentence are not included in the extracted sentence.
filterusermentions	Optional. Default false. When set to true, sentences that are only Twitter user mentions (@username) are skipped over and ignored. Any user-mentions in a sentence are not included in the extracted sentence.
filterhashtags	Optional. Default false. When set to true, sentences that are only Twitter hashtags (#hashtag) are skipped over and ignored. Any hashtags in a sentence are not included in the extracted sentence.

Argument	Description
adjustcasing	Optional. Defaults to false. When set to true, all letters in the sentence are converted to upper-case before sentence detection. After sentence detection all letters are converted to lower-case. This option is helpful if the original data is all in lower-case and Pulse is incorrectly identifying parts of speech in the sentence.

Notes

- The text argument is limited to 65,000 bytes.
- This function must be used with the `over()` clause. Use with `OVER(PARTITION BEST)` for the best performance if the query does not require specific columns in the `over()` clause.
- *language* can be specified as an argument and/or as a parameter where the argument value supersedes the parameter value.

Examples

```
select ExtractSentence('The quick brown fox jumped. Every good boy deserves fudge', 2)
OVER(PARTITION BEST);
      sentence
-----
Every good boy deserves fudge.
(1 row)
select extractSentence('the quick brown fox jumped over the lazy dog. All good boys deserve fudge'
, 2, 'english') over();
      sentence
-----
All good boys deserve fudge
(1 row)
select extractSentence('the quick brown fox jumped over the lazy dog. All good boys deserve fudge'
,2 using parameters language='english') over();
      sentence
-----
All good boys deserve fudge
(1 row)
select extractSentence('el zorro rapido brinco sobre el perro flojo. Todos los chicos buenos merecen
un premio'
, 2, 'spanish') over();
      sentence
-----
Todos los chicos buenos merecen un premio
(1 row)
```

```
select extractSentence('el zorro rapido brinco sobre el perro flojo. Todos los chicos buenos merecen un premio'
,2 using parameters language='spanish') over();
      sentence
-----
Todos los chicos buenos merecen un premio
(1 row)
```

Filtering Links

```
SELECT ExtractSentence('HP - http://hp.com is a useful website. I
like HP.', 1 USING PARAMETERS filterlinks=true) OVER(PARTITION BEST);
      sentence
-----
hp - is a useful website.
(1 row)
```

GetAllSentences

Extracts a row for each sentence in a body of text. This ability is useful if you need to programmatically get each sentence in a piece of text.

Syntax

```
GetAllSentences(text [, language[ USING PARAMETERS  
[ filterlinks = boolean ]  
[, filterusermentions = boolean ]  
[, filterhashtags = boolean ]  
[, adjustcasing = boolean ]  
[, language = string ]  
])
```

Parameters

Argument	Description
text	The text from which to get the sentences.
language	The language: <ul style="list-style-type: none">• 'english' or 'en'• 'spanish' or 'es'
filterlinks	Optional. Default false. When set to true, sentences that are only links are skipped over and ignored. Any links in a sentence are not included in the extracted sentence.
filterusermentions	Optional. Default false. When set to true, sentences that are only Twitter user mentions (@username) are skipped over and ignored. Any user-mentions in a sentence are not included in the extracted sentence.
filterhashtags	Optional. Default false. When set to true, sentences that are only Twitter hashtags (#hashtag) are skipped over and ignored. Any hashtags in a sentence are not included in the extracted sentence.

Argument	Description
adjustcasing	Optional. Defaults to false. When set to true, all letters in the sentence are converted to upper-case before sentence detection. After sentence detection all letters are converted to lower-case. This option is helpful if the original data is all in lower-case and Pulse is incorrectly identifying parts of speech in the sentence.

Notes

- The text argument is limited to 65,000 bytes.
- This function must be used with the `over()` clause. Use with `OVER(PARTITION BEST)` for the best performance if the query does not require specific columns in the `over()` clause.
- *language* can be specified as an argument and/or as a parameter where the argument value supersedes the parameter value.

Examples

```
SELECT GetAllSentences('The quick brown fox jumped over the lazy  
dog. Every good boy deserves fudge') OVER(PARTITION BEST);
```

```
          sentence  
-----  
The quick brown fox jumped over the lazy dog.  
Every good boy deserves fudge.  
(2 rows)
```

```
select getAllSentences('the quick brown fox jumped over the lazy dog. All good boys deserve fudge'  
, 'english') over();  
sentence_index |          sentence_text  
-----+-----  
1 | the quick brown fox jumped over the lazy dog.  
2 | All good boys deserve fudge  
(2 rows)
```

```
select getAllSentences('the quick brown fox jumped over the lazy dog. All good boys deserve fudge'  
using parameters language='english') over();  
sentence_index |          sentence_text  
-----+-----  
1 | the quick brown fox jumped over the lazy dog.  
2 | All good boys deserve fudge  
(2 rows)
```

```
select getAllSentences('el zorro rapido brinco sobre el perro flojo. Todos los chicos buenos merecen un premio'
, 'spanish') over();
sentence_index | sentence_text
-----+-----
              1 | el zorro rapido brinco sobre el perro flojo.
              2 | Todos los chicos buenos merecen un premio
(2 rows)

select getAllSentences('el zorro rapido brinco sobre el perro flojo. Todos los chicos buenos merecen un premio'
using parameters language='spanish') over();
sentence_index | sentence_text
-----+-----
              1 | el zorro rapido brinco sobre el perro flojo.
              2 | Todos los chicos buenos merecen un premio

SetDefaultLanguage

Sets the new default language to use for Pulse functions if no language is specified in a Pulse function call.

Syntax

`SetDefaultLanguage(Language)`

Parameters

Argument	Description
language	The language: <ul style="list-style-type: none">'<i>english</i>' or '<i>en</i>''<i>spanish</i>' or '<i>es</i>'

Notes

- This function must be used with the OVER() clause.
- The default language immediately after installation is English.
- The language that is set when using this function is the default language across all sessions and is persistent across database restarts.

Examples

```
=> select setDefaultLanguage('es') over();
Success
-----
t
(1 row)
```

See Also

- [SentimentAnalysis](#)

GetLoadedDictionary

Lists the currently loaded words for the specified user-dictionary.

If the user-dictionary is not loaded, then nothing is returned. You must use the OVER() clause with this function.

Syntax

```
SELECT GetLoadedDictionary(user-dictionary [using PARAMETERS language = string][, label='Label']) OVER  
( );
```

Parameters

Argument	Description
user-dictionary	<p>The user-dictionary list to retrieve.</p> <p>Valid values:</p> <ul style="list-style-type: none">• pos_words• neg_words• neutral_words• stop_words• white_list <p>See Dictionaries and Mappings for details on each type.</p>
language	<p>The language of the dictionary:</p> <ul style="list-style-type: none">• 'english' or 'en'• 'spanish' or 'es'
label	<p>The label of the dictionaries that you want to list. If you do not provide a label, Pulse uses the default dictionaries.</p>

Examples

Note: This example is from a three node cluster, so three copies of the words are returned.

```
SELECT GetLoadedDictionary('pos_words') OVER();

      word
-----
:-)
adequate
admire
admiringly
adore
adoringly
adulation
adventuresome

amazement
ameliorate
ample
amusing
--More--

SELECT GetLoadedDictionary('pos_words' using PARAMETERS language='english') OVER();
      word
-----
simplicity
(1 row)

SELECT GetLoadedDictionary('pos_words' using PARAMETERS language='spanish') OVER();
      word
-----
simplicidad
(1 row)
```

See Also

- [LoadDictionary\(\)](#)
- [GetLoadedMapping\(\)](#)

GetLoadedMapping

Lists the currently loaded words for the specified user-defined mapping.

If the mapping is not loaded with [LoadMapping](#), then nothing is returned. This function must be used with the OVER() clause.

Syntax

```
SELECT GetLoadedMapping('normalization' [using PARAMETERS language = string][, label='Label']) OVER();
```

Parameters

Argument	Description
mapping	The mapping list to retrieve. Currently the only mapping supported is: normalization Note: By default, the normalization list is empty.
language	The language of the dictionary: <ul style="list-style-type: none">• 'english' or 'en'• 'spanish' or 'es'
label	The label to which you want to load the specified mapping. If you do not include a label, Pulse loads the default UDDs.

Examples

```
SELECT GetLoadedMapping('normalization') OVER();
key | value
-----+-----
hp | hewlett packard
(1 row)
```

```
SELECT GetLoadedMapping('normalization' using PARAMETERS language='english') OVER();
key |      value
-----+-----
hp  | hewlett-packard
hp  | hewlett packard
(2 rows)

SELECT GetLoadedMapping('normalization' using PARAMETERS language='spanish') OVER();

GetStorage

Lists the currently loaded user-dictionaries and user-defined mapping.

This function must be used with the OVER() clause.

Syntax

```
SELECT GetStorage([using PARAMETERS label='Label']) OVER();
```

Parameters

Argument	Description
label	The label of the dictionaries and mapping names that you want to list. If you do not provide a label, Pulse uses the default dictionaries.

Examples

```
SELECT GetStorage() OVER();
```

key
neg_words_en
neutral_words_en
pos_words_en
stop_words_en
white_list_en
normalization_en
neg_words_es
neutral_words_es
pos_words_es
stop_words_es
white_list_es
normalization_es

(12 rows)

See Also

- [LoadDictionary\(\)](#)
- [LoadMapping\(\)](#)
- [GetLoadedDictionary\(\)](#)
- [GetLoadedMapping\(\)](#)

UnloadLabeledDictionary

Unloads a specific dictionary from a Pulse session. The dictionary continues to exist, and a user can later reload the dictionary, if needed.

You cannot unload a default dictionary, but you can replace it by loading a custom user-defined dictionary.

Syntax

```
SELECT unloadLabeledDictionary(USING PARAMETERS listname='Listname'[, language='Lang'] [, label='Label'])  
OVER();
```

Parameters

Argument	Description
listName	The type of the dictionary that you want to unload. listName must be one of: <ul style="list-style-type: none">• pos_words• neg_words• neutral_words• stop_words• white_list See Dictionaries and Mappings for details on each list type.
language	The language: <ul style="list-style-type: none">• 'english' or 'en'• 'spanish' or 'es'
label	The label of the dictionary that you want to unload.

Examples

```
select unloadLabeledDictionary(USING PARAMETERS listname='neg_words',  
label='custom_negatives') OVER();
```

```
success  
-----  
t  
(1 row)
```

See Also

- [UnloadLabeledDictionarySet\(\)](#)

UnloadLabeledDictionarySet

Unloads all user-defined dictionaries with a particular label from a Pulse session. The dictionaries continue to exist, and a user can later reload the dictionaries, if needed.

You cannot unload a default dictionary, but you can replace it by loading a custom user-defined dictionary.

Syntax

```
SELECT unloadLabeledDictionarySet(USING PARAMETERS label='LabelName') OVER();
```

Parameters

Argument	Description
<i>label</i>	The label of the dictionary set that you want to unload.

Examples

```
select unloadLabeledDictionarySet(USING PARAMETERS label='custom_negatives') OVER();

success
-----
t
(1 row)
```

See Also

- [UnloadLabeledDictionary\(\)](#)

UnloadLabeledMapping

Unloads a specific mapping from a Pulse session. The mapping continues to exist, and a user can later reload it, if needed.

Syntax

```
SELECT unloadLabeledMapping(USING PARAMETERS mapName='normalization' [, language='Lang'][,  
label='Label']) OVER();
```

Parameters

Argument	Description
mapName	The name of the mapping from which you are unloading the dictionary.
language	The language: <ul style="list-style-type: none">• 'english' or 'en'• 'spanish' or 'es'
label	The label of the mapping that you want to unload.

Examples

```
select unloadLabeledMapping(standard USING PARAMETERS label='custom_mapping') OVER();  
  
success  
-----  
t  
(1 row)
```

Best Practices for OEM Customers

Welcome to Best Practices for Vertica OEM Customers. This guide describes best practices and tips for Vertica OEM customers who embed their Vertica database with their own application and deliver it as an on-the-premises solution. Typically, the end users of the application do not interact with the Vertica database directly but rather through the application.

The information in this guide describes technical issues for two types of tasks that OEM customers must perform to optimize the database in their application:

Developing and testing the Vertica database:

- Running Database Designer and designing projections
- Managing your system resources
- Managing data load
- Optimizing delete and update operations
- Dropping partitions to save disk space

Packaging the Vertica database with your application:

- Installing Vertica silently
- Configuring the Vertica database using parameters defined during the development phase
- Using the Administration Tools command-line interface to create, start, and connect to the Vertica database

About This Document

This document outlines best practices and tips for Micro Focus OEM customers.

OEM customers embed the Vertica database with their own application and deliver it as an on-the-premises solution. Typically, the end users of the application do not interact with the Vertica database directly; they interact with the database only through the application.

The information in this document addresses technical issues for three types of tasks that Micro Focus OEM customers must perform to optimize the database in their application:

Part 1: Developing and Testing the Vertica Database

During your application development, install a Vertica database and load it with sample data. You can simulate and test the behavior of the database and application in a production-like environment.

The following sections describe the steps to take and the Vertica features to focus on for the Vertica database to work as desired with your application at a customer site:

- [Installing the Vertica Database](#)
- [Identifying Typical Queries](#)
- [Loading Representative Data](#)
- [Optimizing the Database with Database Designer](#)
- [Managing Database Resources](#)
- [Loading Data into the Database](#)
- [Dropping Partitions Due to Space Constraints](#)
- [Delete and Update Operations](#)

Installing the Vertica Database

To install the Vertica software on your development system, follow the instructions in [Installing Vertica](#).

Loading Representative Data

You can effectively test the way the Vertica database interacts with your application in a production environment. To do so, load data that is representative of the data that you might use in a production environment. Representative data allows you to effectively test database functionality and performance.

For more information about loading data into a Vertica database, see [Bulk-Loading Data](#) in the Administrator's Guide.

Identifying Typical Queries

Identify common queries that your application uses. You can provide these queries to Database Designer, Database Designer to create projections that maximize performance throughput in your database.

Optimizing the Database with Database Designer

An Vertica database stores its data in a physical format called *projections*. For optimal performance, projections should be optimized based on data and workload characteristics.

As Vertica OEM customers, optimize the projection design during your development cycle. You can standardize on that design for all deployments of your application.

The following sections describe the process of tuning projections using Database Designer:

- [What Does Database Designer Do?](#) (Administrator's Guide) gives an overall view of what Database Designer does for your database.
- [Results of Running Database Designer](#) (Administrator's Guide) explains what benefits your database achieves by running Database Designer.
- [Exporting the Optimized Database](#) (in this guide) contains information about how to deploy the optimized projections when the database is embedded with your application.

After you create your database for the first time, load the typical queries and sample data on your development system. Then, create a comprehensive database design as described in [Comprehensive Design](#) in the Administrator's Guide.

What Does Database Designer Do?

Database Designer uses sophisticated strategies to create physical schemas or database designs. These designs provide excellent query performance while using disk space efficiently.

Database Designer can create two types of designs:

- A comprehensive design allows you to create new projections for all tables in your database.
- A query-specific design creates projections for all tables referenced in the queries you supply to Database Designer.

Database Designer accepts unlimited sample queries for a comprehensive design, It can accept up to 100 sample queries in the query input file for a query-specific design.

Results of Running Database Designer

In most cases, the projections that Database Designer creates provide excellent query performance within physical constraints while using disk space efficiently. Database Designer:

- Recommends buddy projections, which significantly improve load, recovery, and site node performance.
- Automatically rebalances data after you add or remove nodes.
- Produces higher quality designs by considering [UPDATE](#) and [DELETE](#) statements.

Database Designer creates two scripts:

- Design script—Contains all the DDL statements that are needed to create the design.
- Deployment script—Contains all the CREATE PROJECTION scripts that are needed to create the projections for the design. The deployment script is a subset of the design script.

[Exporting the Optimized Database](#) in this guide describes how to configure these scripts so that you can standardize all customers on the optimal projections. The scripts must be portable to deployments with different numbers of nodes and K-safety levels.

Exporting the Optimized Database

After you optimize the database using Database Designer and other techniques, verify that the optimized projections are available for all customers in the deployed database.

The following Vertica functions generate scripts that create the database on the customer's cluster:

- [EXPORT_CATALOG](#)—Generates a SQL script that re-creates a physical schema design in its current state on a different cluster.
- [EXPORT_OBJECTS](#)—Generates a SQL script that re-creates on a different cluster all the non-virtual objects to which you have access. Running the generated SQL script on another cluster creates all referenced objects before their dependent objects.
- [EXPORT_TABLES](#)—Generates a SQL script that re-creates a logical schema on a different cluster. This logical schema includes schemas, tables, constraints, and view.

After you have created these scripts, edit them as follows:

- Modify the CREATE PROJECTION statements to include the appropriate segmentation clauses.
- Modify the CREATE PROJECTION statements to specify ALL NODES KSAFE *<value>*. As a result, all unsegmented projections are replicated on all nodes, with the designated K-safety value. If you don't specify a K-safety value, Vertica uses the current K-safety value, or 1.

Managing Database Resources

For large data sets of complex workloads, Micro Focus recommends that you run the database software on dedicated servers.

In some installations, you may have to run the Vertica database on a shared server with your application. To manage the CPU and memory usage so that neither the database nor your application monopolizes them, consider the following tips:

- [Configuring CPU Resources](#)
- [Configuring Memory Resources](#)

Configuring CPU Resources

You can configure CPU resources in two ways:

- Pinning Vertica processes to certain CPUs
- Setting run-time priorities for resource pools

Pinning Vertica Processes to Certain CPUs

To pin an entire Vertica server process and its child processes to execute on a specified set of CPUs in the cluster, use the following configuration parameters. These parameters do not affect external processes and applications:

- `PINPROCESSORS`: Number of CPUs to which Vertica processes will be pinned
- `PINPROCESSORSOFFSET`: Offset for the start of CPUs to be used by the Vertica server

For example, suppose you have a cluster where each node has 24 CPUs, numbered 0 through 23. In this case, you can restrict the server process to CPUs #16–23 by entering the following statements:

- `SELECT SET_CONFIG_PARAMETER('PINPROCESSORS', 8)`
- `SELECT SET_CONFIG_PARAMETER('PINPROCESSORSOFFSET', 16)`

Pin your application to the processors that are not allocated to the Vertica database. To make sure that other applications do not use the processors assigned to the Vertica server, use the Linux `cgroups` command.

Setting Run-Time Priorities for Resource Pools

You can manage resources in a resource pool. For you to do so, those resources must be assigned to queries already running in that resource pool.

You assign each resource pool a run-time priority of `HIGH`, `MEDIUM`, or `LOW`. These settings determine the amount of run-time resources (such as CPU and I/O bandwidth) assigned to queries in the resource pool when they run. Queries in a resource pool with a `HIGH` priority are assigned greater run-time resources than those in resource pools with `MEDIUM` or `LOW` run-time priorities.

Configuring Memory Resources

To limit the amount of overall system memory that you allocate to the Vertica database, set the `MAXMEMORYSIZE` parameter on the `GENERAL` resource pool.

To prevent swapping, verify that your application uses only the memory that the database is not using.

For example, suppose the `MAXMEMORYSIZE` of the `GENERAL` pool for the database is set to 32

GB on a system with 48 GB of RAM. In this case, your application should use no more than $(48 - 32) = 16$ GB of RAM.

Loading Data into the Database

While your application is running, you load data into your Vertica database on a regular basis. You can collect large amounts of data to load into your database at once, if you can meet your latency service-level agreement (SLA).

Simulate your data-loading operations in a production environment. Make sure to replicate the maximum expected rates of loading and spiking.

The following sections describe how Vertica stores data and how to load data into your database. They also describe how you can tune the processes and monitor the system to prevent performance problems:

- [WOS, ROS, and the Tuple Mover](#)
- [How Loading Works](#)
- [Loading Data from a File](#)
- [Loading Data from Your Application](#)
- [Parallel Load Streams](#)
- [Trickle Loading](#)
- [Monitoring Load Operations](#)

WOS, ROS, and the Tuple Mover

Vertica supports INSERT, UPDATE, DELETE, and bulk load operations (COPY), intermixed with queries in a typical data warehouse workload. The storage model consists of three elements, which operate the same on each Vertica node:

- *Write Optimized Store (WOS)* is a memory-resident data structure for storing INSERT, UPDATE, DELETE, and COPY (without `/*+DIRECT*/` hints) actions. To support very fast data load speeds, the WOS stores records without data compression or indexing. The WOS organizes data by epoch and holds both committed and uncommitted transaction data.

- *Read Optimized Store (ROS)* is a highly optimized, read-oriented, disk storage structure. The ROS makes heavy use of compression and indexing. You can use the `COPY...DIRECT` and `INSERT` (with `/*+DIRECT*/` hints) statements to load data directly into the ROS.
- *The Tuple Mover (TM)* is the Vertica database optimizer component that moves data from memory (WOS) to disk (ROS). The Tuple Mover runs in the background, performing some tasks automatically at time intervals determined by its configuration parameters.

For further information about the WOS, ROS, and Tuple Mover, see [Hybrid Storage Model](#) in Vertica Concepts.

How Loading Works

When you load data into a database, Vertica first moves it into memory (WOS) by default. You can override this default, and specify that Vertica move the data directly to disk (ROS). Periodically, the Tuple Mover:

- Moves data from the WOS to the ROS.
- Combines like-size ROS containers.
- Deletes purges records.

If the you move too much data too frequently to the WOS, the data can spill to disk. No data is lost, but such spillover can cause performance problems.

Loading Data from a File

If the data to be loaded into your database is stored in a file, use the `COPY` statement to load the data. You can also use `COPY` to load data from a data stream.

In its basic form, use `COPY` as follows:

```
COPY target-table FROM data-source
```

For more information, see the following sections of the Vertica documentation:

- [Using COPY and COPY LOCAL](#) in the Administrator's Guide
- [COPY](#) in the SQL Reference Manual
- [COPY LOCAL](#) in the SQL Reference Manual

Loading Data from Your Application

If the application needs to push data into the Vertica database, use the driver associated with the programming language that your application uses. For more information, see:

- [Loading Data through ODBC](#) in Connecting to Vertica
- [Loading Data through JDBC](#) in Connecting to Vertica
- [Loading Data through ADO.NET](#) in Connecting to Vertica

Parallel Load Streams

When you have a large amount of data to load, use parallel load streams to distribute the load operations across the cluster. To do this, create threads from multiple nodes that are connected to the Vertica database and load the data. This approach lets you use vsql, ODBC, ADO.NET, or JDBC. You can load server-side files or client-side files using the COPY from LOCAL statement.

Best practices for parallel load streams are:

- Issue a single multi-node COPY command that loads different files from different nodes. Specify the *nodename* option for each file.
- Issue a single multi-node COPY command that loads different files from any node using the ON ANY NODE option.

For additional information, see [Using Parallel Load Streams](#) in the Administrator's Guide.

Trickle Loading

Trickle loading is the process of loading data into your database periodically. You can use trickle loading to create a more sustainable load process that generates fewer ROS containers.

The Vertica database uses the transaction isolation level of READ COMMITTED. This level allows users to see the most recently committed data without holding any locks.

READ COMMITTED also allows new data to be loaded while concurrent queries are running.

To tune the trickle-loading operations:

- Adjust batch size. Generally, larger load batches are more efficient.
- Alter the moveout/mergeout parameters:
 - MergeOutInterval
 - MoveOutInterval
 - MoveOutMaxAgeTime
 - MoveOutSizePct
- Limit the load process to a specific resource so that other resources are available to queries. To do so, create a resource pool specifically for the trickle-loading process.

Monitoring Load Operations

When you simulate the load operations while developing your application, there are two system tables you must monitor. These tables help you verify that you have configured load operations in a way that negative effects on the database or application performance:

- [PROJECTION_STORAGE](#)
- [PARTITIONS](#)

PROJECTION_STORAGE

While developing your application, monitor the ROS count over time. To monitor the ROS count:

- Query the ROS_COUNT field in the PROJECTION_STORAGE system table.
- Query partitions that show the ROS_COUNT per partition.

The default maximum for the ROS_COUNT field is 1024. The ROS_COUNT value should not come close to 1024 for the duration of a partition and through the time it takes an old partition to merge. If the ROS_COUNT field does not come close to 1024, your loading techniques should be adequate.

```
VMart=> SELECT projection_id, projection_name, ros_count
         FROM projection_storage;
 projection_id | projection_name | ros_count
-----+-----+-----
45035996273719430 | promotion_dimension_super | 1
```

```
45035996273720042 | online_page_dimension_super | 1
45035996273719788 | employee_dimension_super   | 1
45035996273719276 | store_dimension_super       | 1
45035996273719610 | customer_dimension_super    | 1
45035996273722132 | T_super                      | 1
45035996273719098 | product_dimension_super     | 1
45035996273719942 | warehouse_dimension_super   | 1
45035996273720000 | shipping_dimension_super    | 1
45035996273720498 | online_sales_fact_super     | 1
45035996273719536 | vendor_dimension_super      | 1
45035996273720206 | store_sales_fact_super      | 1
45035996273720652 | inventory_fact_super        | 1
45035996273718920 | date_dimension_super        | 1
45035996273720336 | store_orders_fact_super     | 1
45035996273720100 | call_center_dimension_super  | 1
45035996273722194 | T2_super                    | 1
(17 rows)
```

PARTITIONS

While developing your application, monitor the PARTITIONS system table. Make sure that the number of ROS containers per partition does not reach the maximum of 1024.

In addition, monitor the `ros_size_bytes` field to see if there are any small ROS containers that you can merge.

```
=> SELECT projection_name, ros_id, ros_size_bytes
   FROM partitions;
projection_name |      ros_id      | ros_size_bytes
-----+-----+-----
t_p            | 45035996273740461 |          90
t_p            | 45035996273740477 |          99
t_p            | 45035996273740493 |          99
```

Dropping Partitions Due to Space Constraints

If your hardware has fixed disk space, you might need to configure a regular process to roll out old data by dropping partitions.

For example, if you have only enough space to store data for a fixed number of days, configure Vertica to drop the partition with the oldest date. To do so, create a time-based job scheduler, such as `cron`, to drop the partition on a regular basis during low-load periods.

If the ingest rate for data has peaks and valleys, you can use two techniques to manage how you drop partitions:

- Set up a process to check the disk space on a regular (daily) basis. If the percentage of used disk space exceeds a certain threshold—for example, 80%—drop the oldest partition.
- Add an artificial column in a partition that increments based on a metric like row count. For example, that column might increment each time that the row count increases by 100 rows. Set up a process that queries that column on a regular (daily) basis. If the value in the new column exceeds a certain threshold—for example, 100—drop the oldest partition, and set the column value back to 0.

For more information about partitions, see the following sections in the Vertica documentation:

- [CREATE TABLE](#) in the SQL Reference Manual
- [Working with Table Partitions](#) in the Administrator's Guide

Load Balancing

In Vertica, load balancing supports multiple client connections through an IP address that is shared among all nodes in a cluster. Your cluster needs to balance incoming client requests across nodes and prevent node exclusion from clients in the case of node failure.

While you are developing your application, simulate a high load of activity in your cluster to mimic the expected behavior after the application is running.

You can perform load balancing on your database cluster using any of these methods:

- [Native Connection Load Balancing](#)
- [Third-Party Load Balancers](#)

For more detailed information, see the [Connection Load Balancing](#) and [Adding Nodes](#) sections in the Administrator's Guide.

Native Connection Load Balancing

The Vertica server and client libraries have native connection load balancing built in. This feature distributes client connection CPU and memory overhead across all nodes in the database cluster. Native connection load balancing can prevent overburdening some nodes with many client connections, while other nodes have few client connections.

You must enable native connection load balancing on both the Vertica server and the client.

For more information about native connection load balancing, see the following topics in the Administrator's Guide:

- [About Native Connection Load Balancing](#)
- [Enabling and Disabling Native Connection Load Balancing](#)
- [Monitoring Native Connection Load Balancing](#)

To learn how to enable native connection load balancing with your specific client software, see the following topics in Connecting to Vertica:

- [Enabling Native Connection Load Balancing in JDBC](#)
- [Enabling Native Connection Load Balancing in ODBC](#)
- [Enabling Native Connection Load Balancing in ADO.NET](#)

Third-Party Load Balancers

You can perform load balancing across your Vertica database cluster using third-party load balancers.

Third-party load balancers exist as software applications or hardware appliances. They manage the inbound and outboard data traffic and network connections throughout the cluster. Their goal is to distribute the workload evenly among all the nodes in the cluster.

Many third-party load balancers are available.

Before choosing a load balancer for your Vertica database cluster, consider these configuration characteristics:

- Size of the cluster
- Potential future growth of your cluster
- Security
- Performance

Delete and Update Operations

You may have small configuration tables with more of an online transaction processing (OLTP) workload. If so, your Vertica database can handle this situation efficiently.

The following sections explain how to configure your database to ensure optimal performance during delete and update operations:

- [How Vertica Deletes and Updates Data](#)
- [Buffering Deletes and Updates](#)
- [Monitoring Deletes and Updates](#)
- [Purging Deleted Data](#)

How Vertica Deletes and Updates Data

In Vertica, delete operations do not actually remove rows from physical storage. Instead, the `DELETE` statement marks rows as deleted.

Update operations have the same effect; the `UPDATE` statement actually combines delete and insert operations. The deleted rows remain in physical storage until the Tuple Mover performs a purge operation. The purge operation permanently removes deleted data so that the disk space can be reused.

For more information about how deletes and updates work in Vertica, see [Mergeout](#) in the Administrator's Guide.

Buffering Deletes and Updates

The most efficient way you can perform delete and update operations with Vertica is to update many database records at a time using fewer statements. To do this, buffer database deletes and updates in your application before you submit them. That way, you can manage the flow of the delete and update operations so that they do not interfere with normal database performance.

For more information, see [Best Practices for DELETES and UPDATES](#) in the Administrator's Guide.

Monitoring Deletes and Updates

The frequency of delete and update submissions to the database should be sustainable and not negatively impact performance. While you develop your application, make sure to monitor the delete and update operations in the database. To do so, monitor the `DELETE_VECTORS` system table. This table provides a view of the number of deleted records and their corresponding delete vectors that are still physically stored in the system:

```
VMart=> SELECT node_name, schema_name, projection_name,
              deleted_row_count, used_bytes FROM delete_vectors;
-[ RECORD 1 ]-----+-----
node_name      | v_vmart_node0001
schema_name    | public
projection_name | product_dimension_super
deleted_row_count | 32345
used_bytes     | 524288
-[ RECORD 2 ]-----+-----
node_name      | v_vmart_node0001
schema_name    | public
projection_name | employee_dimension_super
deleted_row_count | 943
used_bytes     | 54788
-[ RECORD 3 ]-----+-----
node_name      | v_vmart_node0001
schema_name    | public
projection_name | warehouse_dimension_super
deleted_row_count | 20
used_bytes     | 16384
```

Purging Deleted Data

Consider scheduling a nightly purge of small tables that receive frequent updates. This operation rewrites the tables while removing deleted records. Run the nightly purge against small tables that would not be expensive to rebuild and that have many deleted records.

For more information, see [PURGE_TABLE](#) in the SQL Reference Manual.

Part 2: Packaging the Vertica Database with Your Application

After you install your Vertica database, load sample data into it, and test the database operation in a simulated production environment. Then, create a script that installs and configures the database with your application. This script should

- Perform its operations silently, in a way that is invisible to your end users.
- Be portable so that it can install the database on a cluster with any number of nodes.

The following sections describe what functions the script should perform.

- [Installing the Vertica Database at the Command Line](#)
- [Creating the Database](#)
- [Configuring the Database](#)
- [Starting the Database](#)
- [Connecting to the Database](#)
- [Backing Up the Database](#)

Installing the Vertica Database at the Command Line

The packaging script should contain commands to execute the Vertica installation procedure.

Important: Vertica must be installed separately for each user. Do not create a system image for subsequent installations, which may cause all users to use the same SSH keys. This situation can result in serious security issues.

The commands in the packaging script should perform the following tasks:

1. Login as the root user.
2. Create a properties file that enables non-interactive setup by supplying the parameters you want the Vertica database to use. The properties file is described in [Installing Vertica Silently](#) in Installing Vertica.
3. Install the database by running the `install_vertica` script, as described in [Installing Vertica Silently](#) in Installing Vertica.
 - a. Make sure to run the scripts with the `-y` parameter to avoid the script asking for EULA agreement.
 - b. On a single-node installation, consider using the host name or IP address instead of `localhost` or `127.0.0.1` because of the following limitations:
 - The `-s` parameter is required for multi-node installations. On single-node installations the parameter is optional, and the default is `localhost`. However, if you plan to expand to additional hosts later, you must use the `-s` parameter. If you do not use the `-s` parameter, your Vertica installation cannot be upgraded to a multi-node deployment.
 - On a single-node `localhost` installation, the installer does not set up a passwordless `ssh`. Vertica's backup scripts require that the administrator be able to log into the node via `ssh` without a password. Consequently, if you want to use the backup scripts, you must manually enable passwordless `ssh` logins for any single-node installation.
 - If either side of a connection is a single-node cluster installed to `localhost`, importing and exporting data fails. Failure also occurs if you do not specify a host name or IP address for your single-node cluster.
4. To save any warnings that the `install_vertica` script returns, redirect any warning messages to a separate file. To do so, specify the `redirect_output = filename` parameter in the properties file. After the installation completes, review the warnings and correct any problems that are critical.
5. If you need to access the Vertica database from a client application, follow the steps in [Installing the Client Drivers](#) in Connecting to Vertica.
6. If you need to use the Vertica `vsq` executable image on a non-cluster Linux host to connect to an Vertica database, follow the steps in [Optionally Install the vsq Client Application on Non-Cluster Hosts](#) in Installing Vertica.

7. Disconnect from the Administration Host.
8. Unless you used the `-L` parameter in the properties file, install the license key you downloaded.

Note: To use data or catalog directories other than those that the `install_vertica` script creates, create those directories, and make sure that `dbadmin` owns them.

Creating the Database

Before you embed the Vertica database with your customer application, you must create it. To do so, add the following command to the packaging script:

```
$ /opt/vertica/bin/admintools --tool create_db [ options ]
```

Command-Line Options:

Option	Function
<code>-h</code> <code>--help</code>	Show this help message and exit.
<code>-s NODES</code> <code>--hosts=NODES</code>	Comma-separated list of hosts to participate in database.
<code>-d DB</code> <code>--database=DB</code>	Name of database to be created.
<code>-c CATALOG</code> <code>--catalog_path=CATALOG</code>	[Optional] Path of catalog directory.
<code>-D DATA</code> <code>--data_path=DATA</code>	[Optional] Path of data directory.
<code>-p DBPASSWORD</code> <code>--password=DBPASSWORD</code>	[Optional] Database password in single quotes.
<code>-l LICENSEFILE</code> <code>--license=LICENSEFILE</code>	[Optional] Database license.
<code>-P POLICY</code> <code>--policy=POLICY</code>	[Optional] Database restart policy.

The following example shows how to create a database named `mydb`:

```
$ admintools -t create_db
-s 10.20.100.66,10.20.100.67,10.20.100.68
-d mydb -c /home/dbadmin/mydb/catalog
-D /home/dbadmin/mydb/data -l /home/dbadmin/vlicense.dat

Info: no password specified, using none
Distributing changes to cluster.
10.20.100.66 OK [vertica][(6, 1, 2)][20130430][x86_64]
10.20.100.67 OK [vertica][(6, 1, 2)][20130430][x86_64]
10.20.100.68 OK [vertica][(6, 1, 2)][20130430][x86_64]

```

Configuring the Database

Execute the scripts that you created in [Exporting the Optimized Database](#) in this guide that:

- Create the physical schema.
- Create the catalog objects.
- Create the logical schema.
- Create projections that have been configured for use with the application.

Starting the Database

To start your Vertica database, add a command to your packaging script that uses the `admintools` script with either the `start_db` or `restart_db` option:

- The `start_db` option starts a database/
- The `restart_db` option allows you to restart the database at the last good epoch, minimizing any loss of data.

start_db Option

```
$ /opt/vertica/bin/admintools --tool start_db [ options ]
```

Command-Line Options

Option	Purpose
-h --help	Show this help message and exit.
-d <i>DB</i> --database= <i>DB</i>	Name of database to be started.
-p <i>DBPASSWORD</i> --password= <i>DBPASSWORD</i>	Database password in single quotes.
-i --noprompts	Do not stop and wait for user input. (Default: False.)

The following example starts the database called VMart and assigns the database password Vertica1:

```
$ admintools -t start_db -d VMart -p Vertica1
```

restart_db Option

```
$ /opt/vertica/bin/admintools --tool restart_db [ options ]
```

Command-Line Options

Option	Purpose
-h --help	Show this help message and exit.
-d <i>DB</i> --database= <i>DB</i>	Name of database to be restarted.
-e <i>EPOCH</i> --epoch= <i>EPOCH</i>	Epoch at which the database is to be restarted. If 'last' is given as the argument, the database restarts from the last good epoch.
-p <i>DBPASSWORD</i> --password= <i>DBPASSWORD</i>	Database password in single quotes.

Option	Purpose
-i --noprompts	Do not stop and wait for user input. (Default: False.)

Connecting to the Database

To connect to the Vertica database that you started, add the following command to the packaging script:

```
$ /opt/vertica/bin/admintools --tool connect_db [ options ]
```

Command-Line Options

Option	Purpose
-h --help	Show this help message and exit.
-d <i>DB</i> --database= <i>DB</i>	Name of database to connect to.
-p <i>DBPASSWORD</i> --password= <i>DBPASSWORD</i>	Database password in single quotes.

Backing Up the Database

Important: Micro Focus strongly recommends backing up the database on a regular basis. This task is especially important for a single-node environment where K-safety = 0.

Micro Focus provides a comprehensive utility, the `vbr` Python script, that lets you back up, restore, list backups, and copy your database. You can create full and incremental database backups of specific schemas or tables to use with a multi-tenant database. Using `vbr`, you can save your data to a variety of locations:

- A local directory on the nodes in the cluster
- One or more hosts outside of the cluster
- A different Vertica cluster (in effect, cloning your database)

Create regular backups of your data by running `vbr` from a cron job or other task scheduler.

Part 3: Ongoing Database Maintenance

After your application is running at the customer site, monitor your database performance in the following areas. These steps help you prevent performance issues and down time:

- [Monitoring System Resources for Concurrent Use](#)
- [Monitoring Database Size](#)
- [Updating Statistics](#)
- [Optimizing the Physical Schema](#)
- [Optimizing Query Performance](#)
- [Database Recovery](#)
- [Hardware Maintenance](#)
- [Troubleshooting Performance](#)

Monitoring System Resources for Concurrent Use

When running in a multi-user environment, you may have several processes competing concurrently for system resources. Use the built-in GENERAL resource pool to provide resources in a multi-user environment. The GENERAL pool is preconfigured based on your system's RAM and machine cores. You can customize the GENERAL pool or define new resource pools and configure them for memory usage, concurrency, and query priority.

To monitor use of system resources over time, query the following system tables.

System Table Name	Description
RESOURCE_ACQUISITIONS	Details about each resource (memory, open file handles, threads) acquired by each request for each resource pool in the system.
RESOURCE_POOL_DEFAULTS	Default values for parameters in each internal and user-defined resource pool.

System Table Name	Description
RESOURCE_POOL_STATUS	Configuration settings of the various resource pools in the system, including internal pools.
RESOURCE_POOLS	Information about settings with which each resource pool was configured.
RESOURCE_QUEUES	Information about requests that are pending for various resource pools.
RESOURCE_REJECTIONS	Information about requests for resources that are rejected by the Resource Manager.
RESOURCE_REJECTION_DETAILS	Entries for each resource request that the Vertica database denies. This information is useful for determining if there are resource space issues and which users/pools encounter problems.
SYSTEM_RESOURCE_USAGE	History about system resources, such as memory, CPU, network, disk, I/O.

For more information about managing resource pools, see [Best Practices for Managing Workload Resources](#) in the Administrator's Guide.

Monitoring Database Size

You can use your Vertica database until the columnar data reaches the maximum raw data size that the license agreement specifies. In this context, *raw data* means the uncompressed data stored in a single database. The raw data size is estimated as if the data had been exported from the database in text format, rather than as compressed data.

The database uses statistical sampling to calculate an accurate estimate of the raw data size of your database. This approach allows Vertica to estimate the database size without significantly affecting database performance.

Some data is not included when calculating the database size:

- Multiple projections of data from a table. Data appearing in multiple projections of the same table is counted only once.
- Data stored in temporary tables.

- Data accessible through external table definitions.
- Data that has been deleted but not purge from the database.
- Data stored in the WOS.
- Data stored in system tables such as monitoring tables, Data Collector tables, and Database Designer tables.
- Delimiter characters.

If your database size approaches your licensed usage allowance, you see warnings in the Administration Tools and vsql. You have two options to eliminate these warnings:

- Upgrade your license to a larger data size allowance.
- Delete data from your database to remain under your licensed raw data size allowance.

If your database continues to grow, after a grace period, Vertica displays additional warnings in more parts of the system.

If your database size exceeds your licensed data allowance, all successful queries from ODBC and JDBC clients return with a status of `SUCCESS_WITH_INFO` instead of `SUCCESS`. The result contains a warning about your database size. Your ODBC and JDBC clients should be prepared to handle these messages instead of assuming that successful requests always return `SUCCESS`.

If you need a more accurate database size estimate than statistical sampling can provide, use the `AUDIT` function. The `AUDIT` function has parameters that allow you to tune its execution to minimize the impact on database performance.

For more information, see:

- [Calculating the Database Size](#)
- [Monitoring Database Size for License Compliance](#)
- [AUDIT](#)

Updating Statistics

The Vertica query optimizer relies on up-to-date statistics for tables, schemas, and the database. The statistics allow the optimizer to determine the most efficient plan to execute a query.

The following statistics can affect optimizer decisions:

- Eligible projections to answer the query
- The best order in which to perform joins
- Plans involving different algorithms, such as hash join/merge join or group by hash/group by pipelined operations
- Data distribution algorithms, such as broadcast and resegmentation

Without accurate statistics, the optimizer could choose a suboptimal projection or join order for a query.

As you update your data over time, the statistics become out of date. Stale statistics can cause the optimizer to choose a less-than-optimal plan for executing a query. The query plan that the EXPLAIN statement creates contains information about statistics.

How often you update statistics depends on how often your data changes. Micro Focus recommends that you schedule statistics analysis on a regular basis. Regular updates help the optimizer choose the most efficient plan for executing your queries.

For guidance on updating statistics, see [Collecting Database Statistics](#) in the Administrator's Guide.

Vertica provides the following functions related to collecting statistics.

Function	Description
ANALYZE_STATISTICS	Collects and aggregates statistics from all nodes that store projections associated with the specified table or column.
DROP_STATISTICS	Removes statistics for the specified table and lets you optionally specify the category of statistics to drop.
EXPORT_STATISTICS	Exports statistics to an XML file.
IMPORT_STATISTICS	Imports statistics from an XML file created by EXPORT_STATISTICS.

Optimizing the Physical Schema

After you load data into your database, first run Database Designer to create a physical schema that provides optimal query performance.

The first time you run Database Designer, make sure that Database Designer has representative queries and data on which to base the design. Then, create a comprehensive design.

Consider rerunning Database Designer to create an incremental design when:

- The data has changed significantly.
- You use different queries on a regular basis.
- You encounter performance issues with your queries.
- Your schema changes.

For more information, see [Creating a Database Design](#) in the Administrator's Guide.

Optimizing Query Performance

When you submit a query to Vertica for processing, the Vertica query optimizer automatically chooses a set of operations to compute the requested result. These operations together are called a *query plan*. The choice of operations can drastically affect the run-time performance and resource consumption needed to compute the query results. Depending on the properties of the projections defined in your database, the query optimizer can choose faster and more efficient operations to compute the query results.

As your database grows over time, queries could degrade in performance. It is important to monitor the performance of your queries—especially queries that are run frequently or access large data sets.

If you experience query performance issues, you should:

- Analyze the statistics and the histogram for your database tables and run Database Designer. Supply the queries that are experiencing performance problems.
- Review the QUERY_EVENTS system table. This table identifies whether there are issues with the planning phase of a query.

Database Recovery

Recovery is the process of restoring the database to a fully functional state after one or more nodes in the system has experienced a software- or hardware-related failure. Failures can

include:

- Hardware failure of one or more nodes
- Clean database shutdown (initiated)
- Unclean database shutdown, which can be caused by:
 - A critical node failure, leaving part of the data unavailable.
 - A power failure causing all nodes to reboot.
 - Vertica processes terminating due to a software or hardware failure.

A failure can cause a node to lose database objects or to miss DML changes (INSERTs, UPDATEs, and so on) while offline. During recovery, each node retrieves any lost objects and updates any changes by querying the other nodes.

For detailed information about database recovery after specific types of failure, see [Recovering the Database](#) in the Administrator's Guide.

Hardware Maintenance

For detailed information about the hardware required to run the Vertica database, see [Recommendation for Sizing Vertica Nodes and Clusters](#) on the [Vertica User Community](#).

For ongoing maintenance of your cluster nodes, see the next section [Adding or Removing Cluster Nodes](#).

Adding or Removing Cluster Nodes

You can scale your Vertica cluster by adding or removing nodes to meet the needs of your database. The most common way to scale up your cluster is to add nodes to accommodate more data and provide better query performance.

If your cluster has more nodes than it needs, or if you need to divert hardware for other uses, you can scale down your cluster.

You can add or remove nodes without having to shut down or restart the database.

After adding a node or before removing a node, the database rebalances the data. Rebalancing moves data around the cluster to populate the new nodes. It also moves data off the remaining nodes. Data can also be exchanged between nodes that are not being added or removed to

maintain robust intelligent K-safety. If too little disk space exists to rebalance in one iteration, the database rebalances iteratively.

For detailed information about managing your cluster, see [Managing Nodes](#) in the Administrator's Guide.

Troubleshooting Performance

If your application performance is slow, you need to determine whether your application or the Vertica software is causing the problem.

First, evaluate your system for performance issues. If you modify your application, but are still experiencing issues, evaluate your Vertica database for performance issues.

Vertica provides many tools to evaluate the performance of your database. The following sections of the Administrator's Guide describe them in detail:

- [Analyzing Workloads](#)
- [Using Diagnostic Tools](#)
- [Query Plans](#)
- [Profiling Database Performance](#)

The [Query Optimization](#) section of Analyzing Data gives information about improving the performance of your database queries.

Vertica Plug-In for Informatica

Welcome to the Vertica Plug-in for Informatica Guide.

Introduction to Using Informatica PowerCenter with Vertica

Informatica's PowerCenter family of products lets you collect, transform, and store data. The products support a wide variety of data sources, including databases, message queues, and many different file formats.

The PowerCenter Client consists of four main applications:

- Use Designer to create sources, targets, and mappings.
- Use Workflow Manager to create workflows for those sources, targets and mapping you created in Designer.
- Use Workflow Monitor to monitor running workflows.
- Use Repository Manager to manage repository resources, such as moving folders and objects and managing permissions and users.

The PowerCenter Server enables you to access, read, and write to Vertica.

PowerCenter 9.6.1 HotFix 2 includes the PowerExchange (PWX) Connector for Vertica.

Informatica developed this PWX Connector as an alternative to the Vertica plug-in.

The PWX connection includes additional capabilities and performance improvements when connected to Vertica.

History of Integration Between Vertica and Informatica

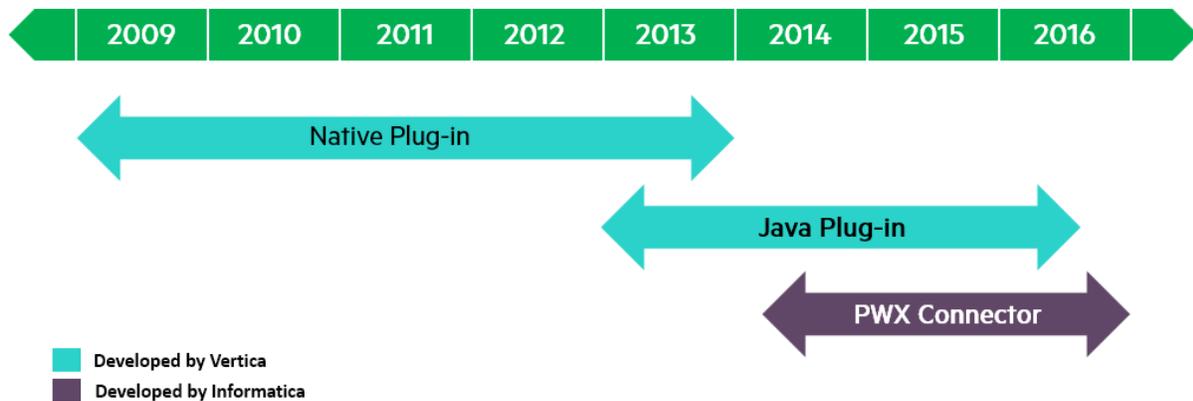

Prior to the PowerExchange (PWX) Connector for Vertica, Micro Focus developed and supported two connectors for Informatica and Vertica:

- In 2009, Micro Focus developed the Vertica Plug-in for Informatica. This connector used the native method of loading data from Informatica into Vertica.
- In 2013, Micro Focus replaced the earlier Vertica Plug-in for Informatica with a Java plug-in that supports all operating system platforms. This plug-in runs on generic JDBC and ODBC connections and includes new and improved features compared to the native plug-in.

This document describes how to use the Vertica Java plug-in for connecting from Informatica to Vertica.

In 2014, Informatica released the PWX Connector for Vertica. This connector includes enhancements to the partitioning and pushdown capabilities of Informatica.

The following timeline shows the history of plug-ins for connecting from Informatica to Vertica:

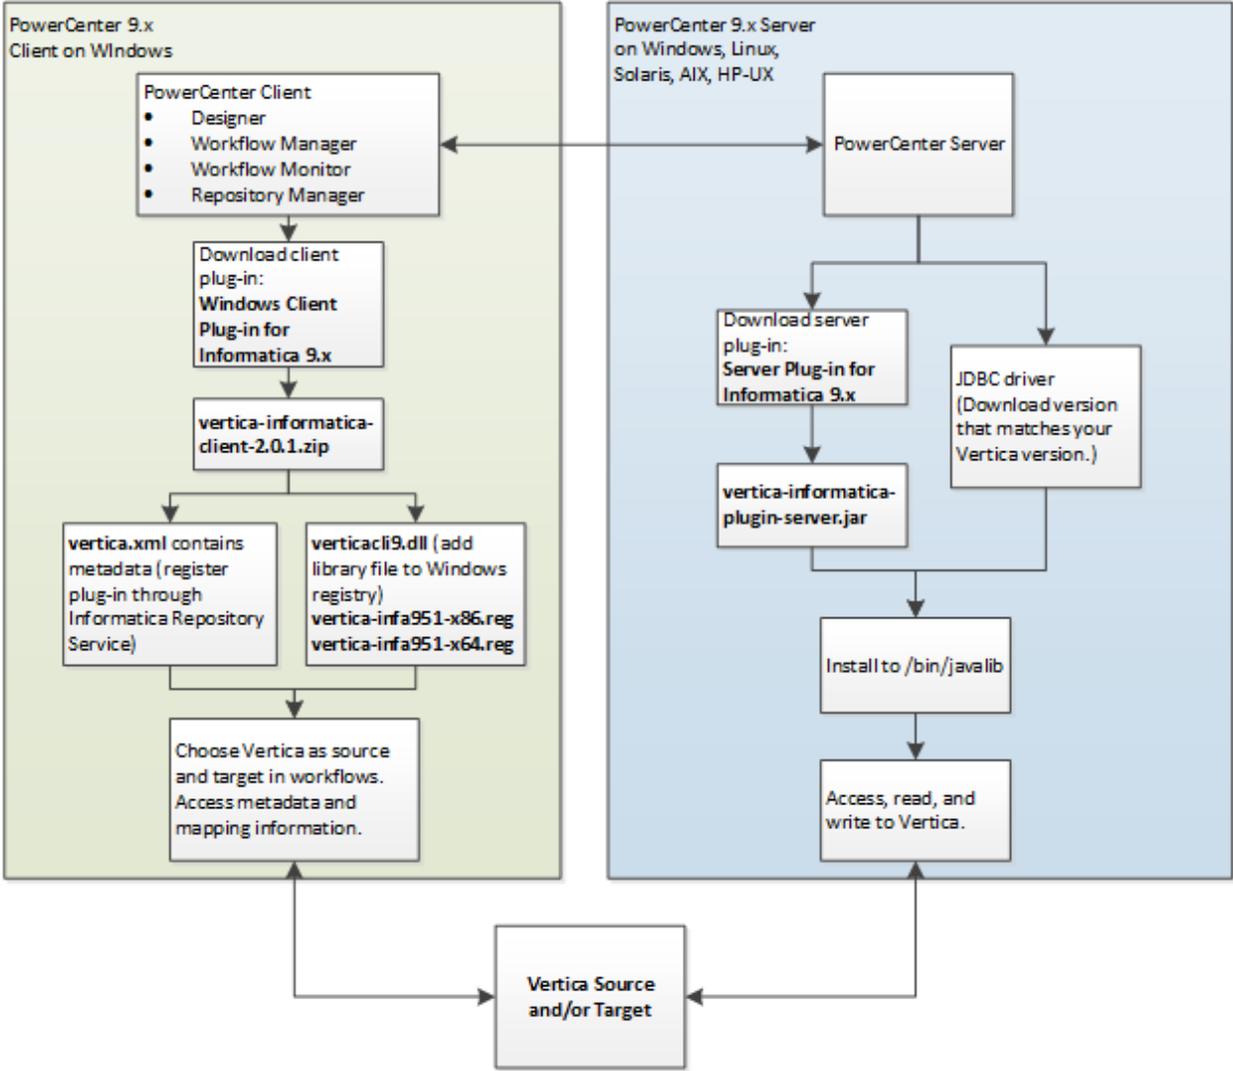

Micro Focus recommends that you use the new PWX Connector for Vertica with Informatica PowerCenter 9.6.1 HotFix 2 or later to connect to your Vertica database.

For detailed information about using the PWX Connector for Vertica, see [Vertica Integration with Informatica: Connection Guide](#).

How the Plug-in Is Configured with Vertica and Informatica PowerCenter

The following illustration provides an overview of the configuration.

This manual provides information for installing plug-in components, using the plug-in to access Vertica as source or target database, and implementing and modifying plug-in features.

Overview

The following table provides recommended steps.

Step	Action	Notes
1	Follow the procedures in Installing the Vertica Plug-in for PowerCenter to download and install plug-in	You must install both client and server components.

Step	Action	Notes
	components.	
2	Review the sample for using the plug-in with PowerCenter in Using the Vertica Plug-in with Informatica PowerCenter .	The sample shows how to import Vertica as source and target. It also provides steps that show you how to specify and connect to your Vertica database and include it in your workflows.
3	Set plug-in features according to your specific needs. Features are listed and described in Accessing and Setting Plug-in Features .	Be aware of situations where the use of one feature depends on another. For example, to take advantage of the increased performance of EnableStreamingBatchInsert , you must set Copy Local Method to None .
4	Check Best Practices for required memory settings and other tips.	Memory requirements are highly dependent upon Informatica and Vertica dedicated resources.

Installing the Vertica Plug-in for PowerCenter

You must download and install a client and a server component for the Vertica Plug-in for Informatica.

As a first step, download both the client and server components of the plug-in from the myVertica portal.

The client portion of the plug-in (`vertica-informatica-client-2.0.1.zip`) includes the following files:

- `vertica.xml` contains the metadata definition needed by the PowerCenter repository to allow communication between PowerCenter and Vertica.
- `verticacli9.dll` is a library file you add to your Windows registry.
- `vertica-infa951-x86.reg` is a registry file you can use to register the dll on 32-bit machines for Informatica PowerCenter 9.5.1.
- `vertica-infa951-x64.reg` is a registry file you can use to register the dll on 64-bit machines for Informatica PowerCenter 9.5.1.

The server portion includes the file `vertica-informatica-plugin-server.jar`.

Note: Each server type requires the Java 6.0 run-time environment.

Installing the Vertica plug-in is a multi-step process. The following sections explain these steps in greater detail, using a simple example.

1. Register the plug-in's metadata with the PowerCenter Repository Service with which you want to access Vertica. Follow the procedures in [Registering the Plug-in's Metadata](#).
2. Add the `verticacli9.dll` library file to the Windows registry. Follow the procedures in [Adding the Library File to the Windows Registry](#).
3. Copy the server plug-in to the PowerCenter server `java1ib` directory. Follow the procedures in [Copying the Plug-in Library on the Server](#).

Registering the Plug-in's MetaData

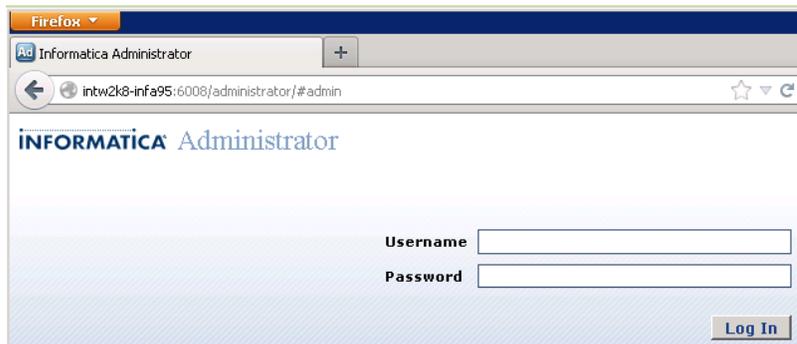

The PowerCenter repository needs information about the Vertica plug-in in order to enable clients to use it. This information is supplied in an XML-format file named `vertica.xml`.

Perform the following to register the plug-in's metadata.

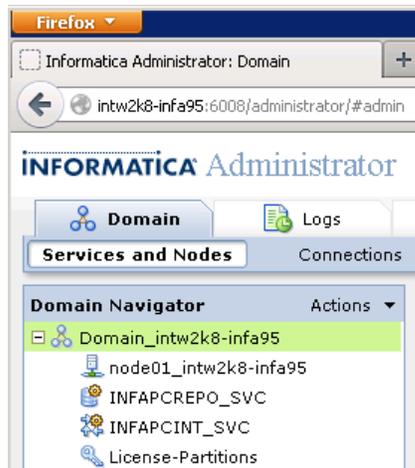

Switch to Exclusive Mode

Before you can register the plug-in's metadata, you must logon to PowerCenter and switch to exclusive mode to ensure that the repository does not change while you are registering the plug-in.

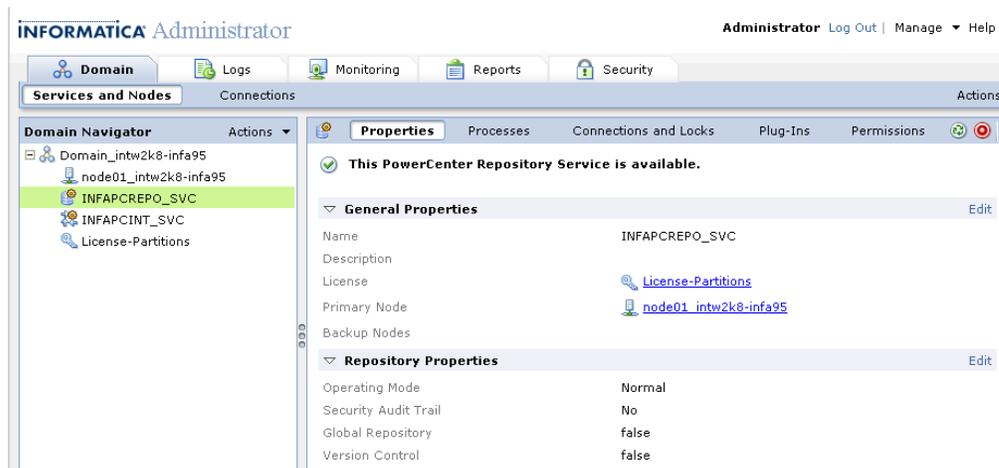

1. Place or copy the file `vertica.xml` to your system.
2. Open a browser and log into the PowerCenter domain's Administration Console.

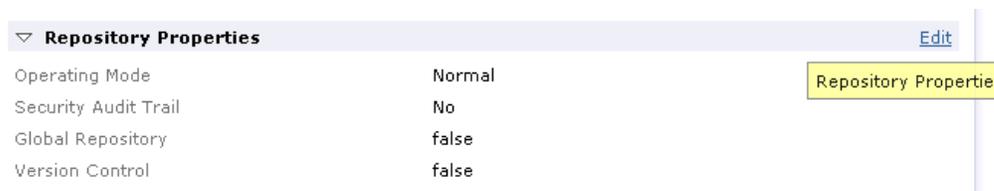

3. Select the **Domain** tab, and click **Services and Nodes**.

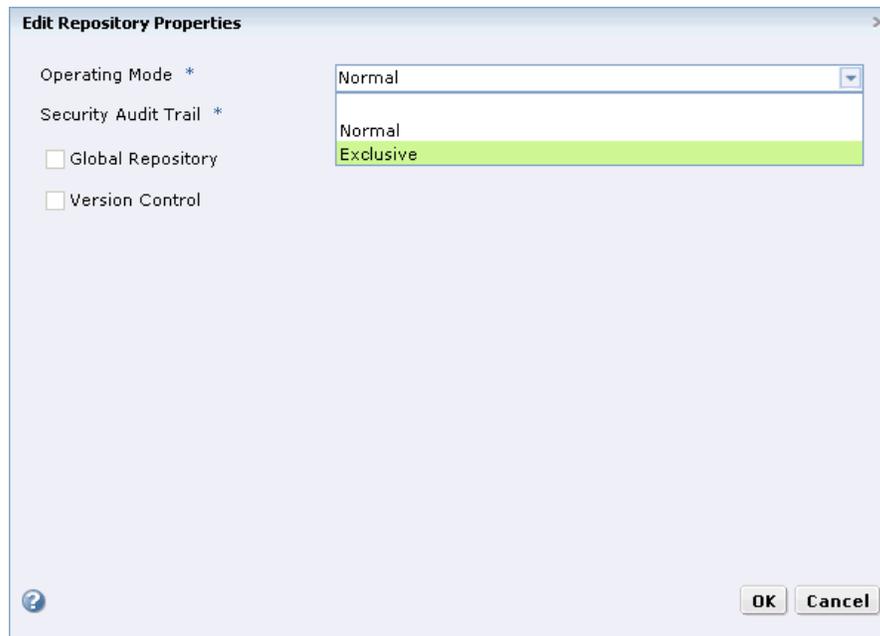

4. In the **Domain Navigator**, click the entry for the repository that you want to connect to Vertica.

5. Under the **Properties** tab, click **Edit** to edit the **Repository Properties** section.

6. In the **Operating Mode** list box, choose **Exclusive**, and then click **OK**.

7. In the **Restart Service** prompt, click **OK** to confirm switching to exclusive mode.

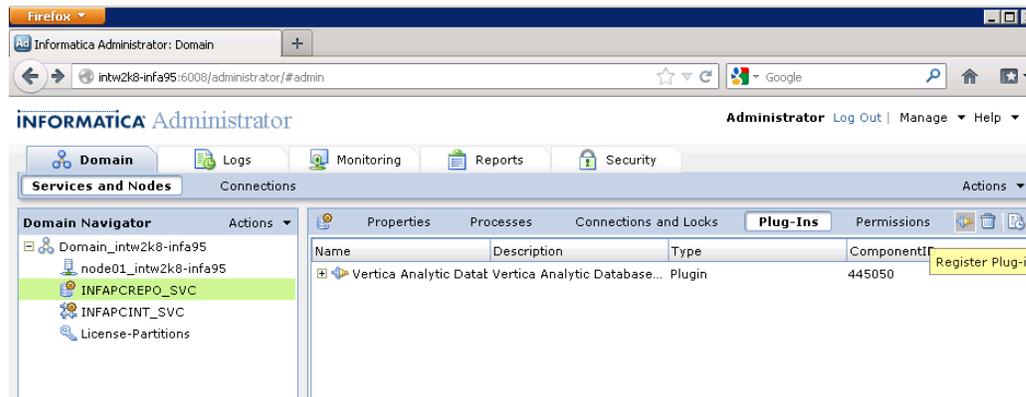

The Repository Service may take from a few moments to several minutes to restart and re-enable itself.

8. Wait until you see the notice, **This PowerCenter Repository Service is available.**

Register the Plug-in

1. On the **Plug-ins** tab, click the icon for registering a plug-in.

2. On the **Choose a plug-in** field, click **Browse** and select the `vertica.xml` in the folder where you earlier placed the file.

3. Under the **Repository Authentication** section, enter your repository username and password.

Note: If you are upgrading from a previously installed plug-in version, select the checkbox, **Update existing plug-in registration**. Otherwise leave the box cleared.

4. Click **OK** to upload the metadata file. The PowerCenter Administration Console uploads the metadata file and registers the Vertica plug-in data.

Switch Back to Normal Mode

1. On the Properties tab's **Repository Properties** section, click **Edit**.
2. In the **Operating Mode** list box, choose **Normal**.
3. In the Restart Service prompt, click **OK** to confirm switching to normal mode.

The Repository Service may take from a few moments to several minutes to restart and re-enable itself.

Adding the Library File to the Windows Registry

For each PowerCenter client system that you want to use with Vertica, you must install a copy of the `verticacli9.dll` file in the client binary folder. This folder is named `client\bin` in the PowerCenter install directory. The following path is typical of a PowerCenter installation for Informatica version 9.5.1:

```
C:\Informatica\9.5.1\clients\PowerCenterClient\client\bin
```

Copy and Register the `verticacli9.dll`

Copy the library file to the client binary directory (i.e., `client\bin`).

Then, add a registry entry to the Windows registry. Adding this entry tells the PowerCenter Designer to load the plug-in library. Perform one of the following to register the plug-in library.

Note: The registry file is specific to Informatica PowerCenter version 9.5.1. The Vertica Plug-in for Informatica has only been tested with this version. If you want to try to use it with another version of PowerCenter, you will need to manually add configuration information to the Windows registry, as explained below.

Register the `verticacli9.dll` Using a Registry File for Informatica PowerCenter 9.5.x

1. Double-click the registry file in Windows Explorer:
 - Use `vertica-infa951-x86.reg` to register the dll on 32 bit machines.
 - Use `vertica-infa951-x64.reg` to register the dll on 64 bit machines.
2. When asked if you want to add the contents of the file to the registry, click **Yes**.

Register the `verticacli9.dll` Manually for all Other Versions of Informatica (9.6.x, 10.x, et. al.)

1. Start the registry editor by typing `regedit.exe` in the Windows Start menu's command run command box.
2. Navigate to the correct location in the registry.

For 32-bit versions of Windows:

```
HKEY_LOCAL_MACHINE\SOFTWARE\Informatica\  
PowerMart Client Tools\x.x.x\Plugins\Informatica
```

For 64-bit versions of Windows:

```
HKEY_LOCAL_MACHINE\SOFTWARE\Wow6432Node\  
Informatica\PowerMart Client Tools\x.x.x\  
Plugins\Informatica
```

Where `x.x.x` is the version of Informatica you are using (for example 9.5.1).

3. Right-click in the right pane of the Registry Editor window. Select **New** then select **String Value**.
4. Change the name of the string value from New Value #1 to `VERTICA`.
5. Double-click the new `VERTICA` entry. When prompted for a new value, enter `verticacli9.dll`.
6. Exit the registry editor.

Copying the Plug-in Library on the Server

The final step in setting up the Vertica plug-in for Informatica is to copy the Vertica server-side plug-in file to the proper directory on the PowerCenter server.

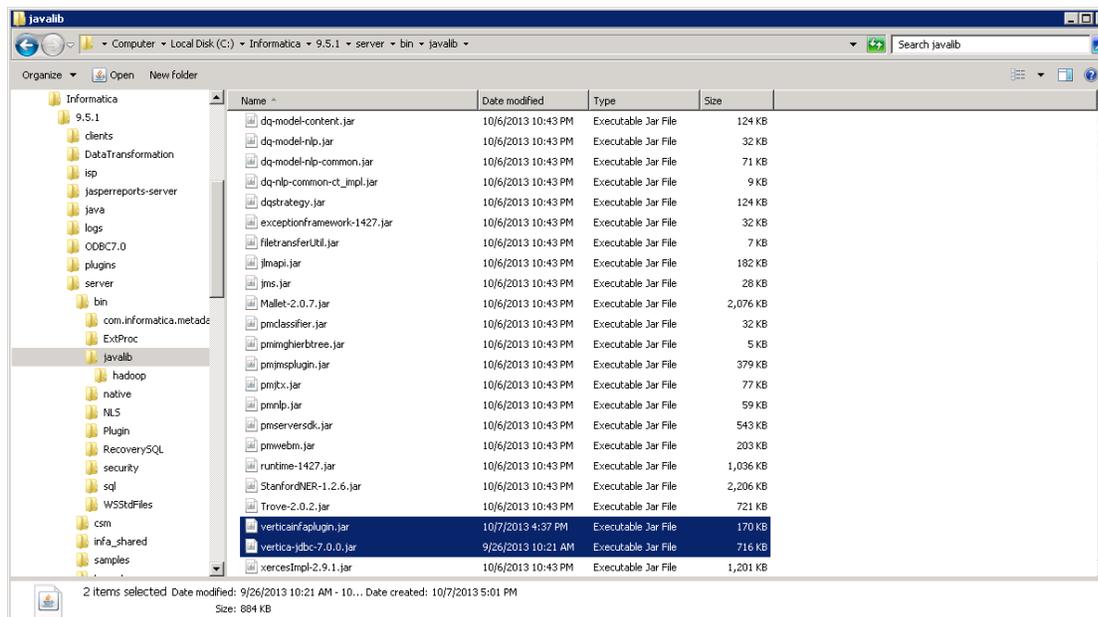

- `vertica-informatica-plugin-server.jar` (for both 32 and 64 bit servers)

Copy the library file to your server's binary directory, which is the `\bin\javallib` subdirectory in the PowerCenter server install directory. The full path to this directory for Windows is usually:

```
C:\Informatica\9.5.1\server\bin\javallib
```

Note: In addition to the file `vertica-informatica-plugin-server.jar`, you must also have the appropriate JDBC driver installed in the same directory (`/bin/javallib`). The JDBC driver you install must match your version of Vertica.

The following sample screen shows a typical Windows path for these files.

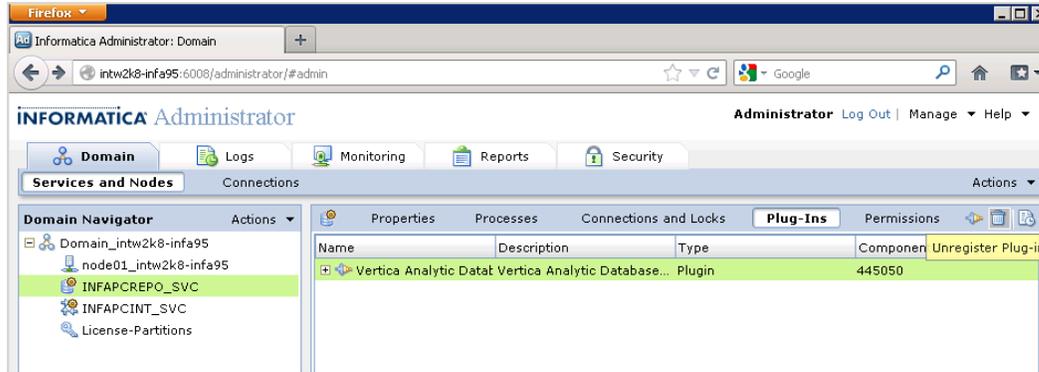

For all supported server operating systems (Linux, Solaris, AIX, HP-UX), you download and install the same file, `vertica-informatica-plugin-server.jar`.

Copy the file to the `server/bin/javallib` subdirectory of the directory where PowerCenter is installed.

Unregistering the Plug-in

Perform this procedure only if you need to unregister the plug-in.

1. Follow the procedure, Switch to Exclusive Mode.
2. Click the trashcan icon to unregister a plug-in.

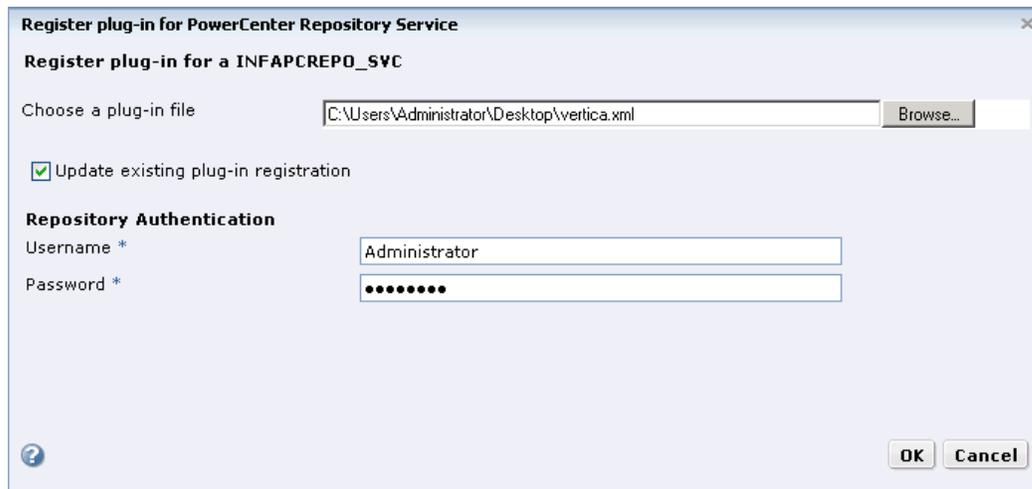

3. In the **Unregister plug-in** pop-up, enter your **Username** and **Password** to unregister the plug-in, and then click **OK**.
4. Follow the procedure, Switch Back to Normal Mode.

Updating the Plug-in

Follow this procedure only if you need to update the plug-in.

1. Follow the procedure, **Switch to Exclusive Mode**.
2. On the **Plug-ins** tab, click the icon for registering a plug-in.
3. On the **Choose a plug-in** field, click **Browse** and select the location of the `vertica.xml` file.
4. Check the box, **Update existing plug-in registration**.
5. Enter your **Username** and **Password** to unregister the plug-in, and then click **OK**.

6. Follow the procedure, **Switch Back to Normal Mode.**

Using the Vertica Plug-in with Informatica PowerCenter

Once you have installed the Vertica Plug-in for Informatica, you can use Vertica as a source or target in Informatica PowerCenter.

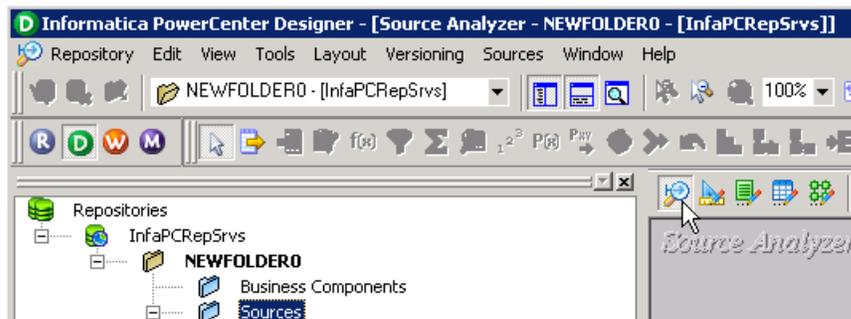

The simple examples in this section walk you through importing source and target, mapping, configuring, and starting your workflow.

Importing a Source Database Table

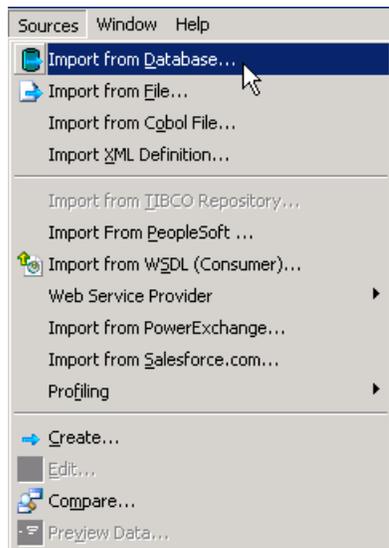

Note: Set up a DSN for your Vertica database before you perform the procedures that follow.

The following example shows how to import a source table from a Vertica database.

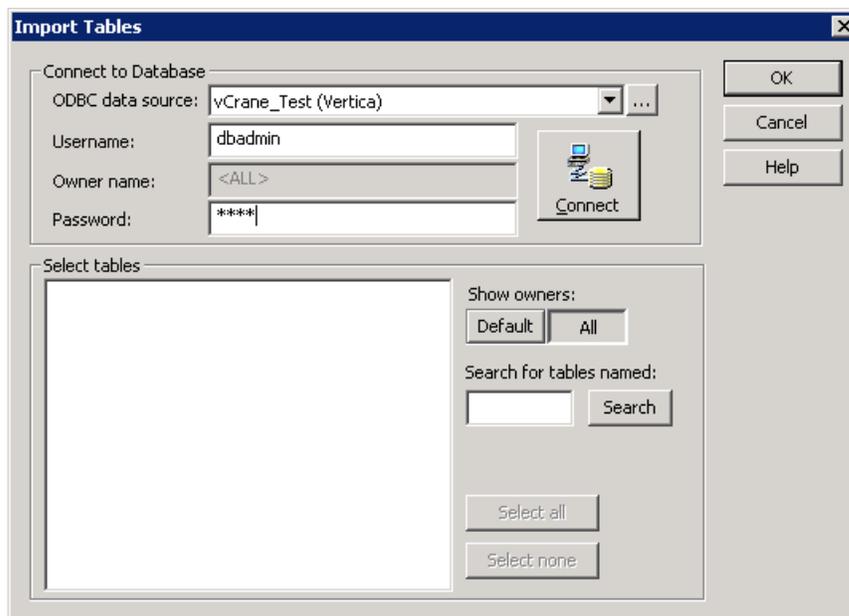

1. In Informatica PowerCenter Designer, select the folder in the repository where you want to create your Vertica source.

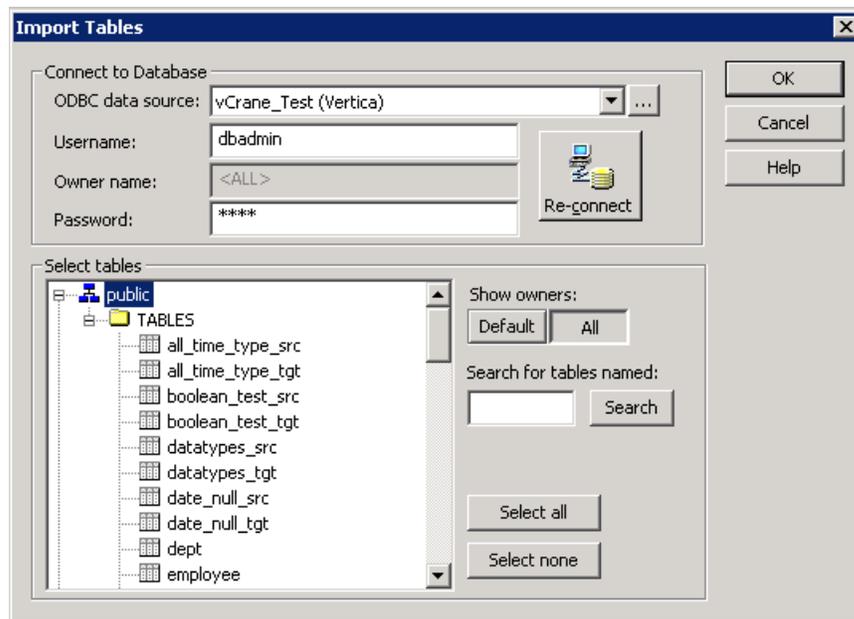

2. Click the Source Analyzer icon.
3. From the Sources list box, select **Import from Database**.

4. From the **Import Tables** dialog box, choose the name of your **ODBC** data source, and enter **Username** and **Password**.

5. Click **Connect**. Under **Select tables**, choose the schema **public**.

6. Choose a table and Click **OK**. For this example, choose only the table, **datatypes_src**. (You can choose a number of tables.)

The table appears in the Source Analyzer panel.

7. Change the table's database type to VERTICA. To do so, double-click the name of the table to launch the **Edit Tables** dialog box.
8. From the **Table** tab, **Database type** list box, choose **VERTICA**.

Note: As of Informatica Version 9.6.1 Hot Fix 2 and later, if you want to use the version of Vertica you downloaded and installed, select the Vertica option from the dropdown menu. If you intend to use the new Vertica Connector from Informatica, select VERTICA from the dropdown menu.

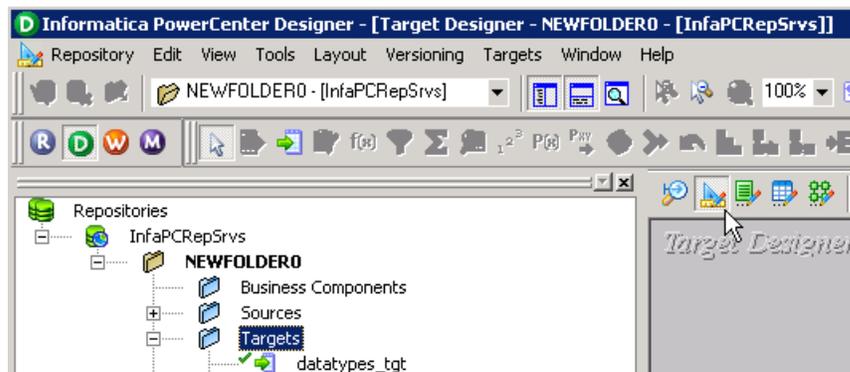

9. Click **OK**. You have imported a source table. Next, follow the procedure in, [Importing a Target Database Table](#).

Importing a Target Database Table

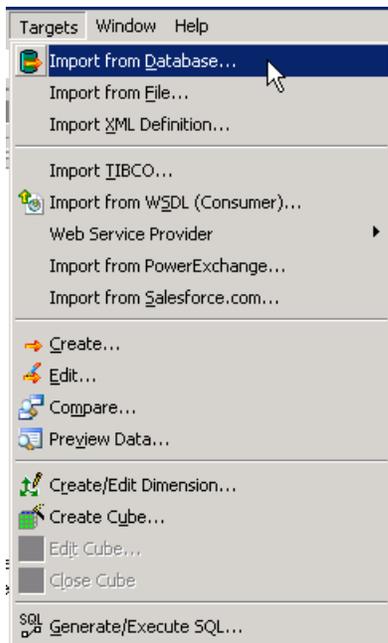

Note: Set up a DSN for your Vertica database before you perform the procedures that follow.

The following example shows how to import a target table from a Vertica database.

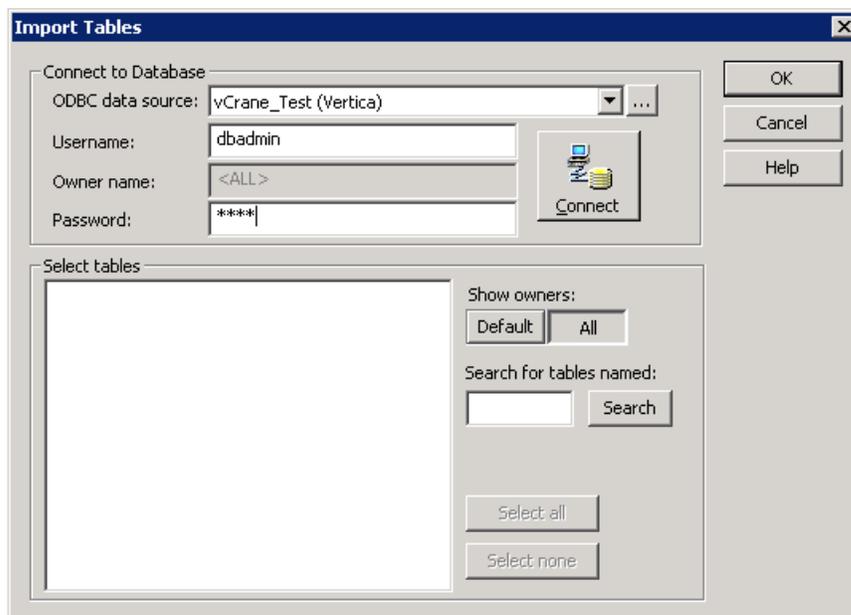

1. In Informatica PowerCenter Designer, select the folder in the repository where you want to create your Vertica target.

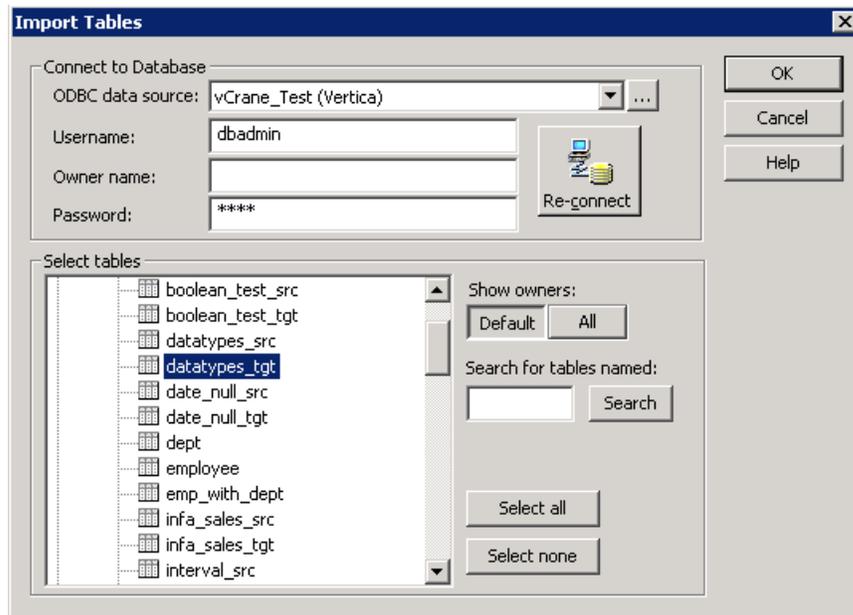

2. Click the Target Designer icon.
3. From the **Targets** list box, choose **Import from Database**.

4. From the **Import Tables** dialog box, choose the name of your **ODBC** data source, and enter **Username** and **Password**.

5. Click **Connect**. Under **Select tables**, choose the schema **public**.

6. Choose a table and Click **OK**. For this example, choose only the table, **datatypes_tgt**.

The table appears in the **Target Designer** panel.

7. Change the table's database type to VERTICA. Double-click the name of the table to launch the **Edit Tables** dialog box.
8. From the **Table** tab, **Database type** list box, choose **VERTICA**.

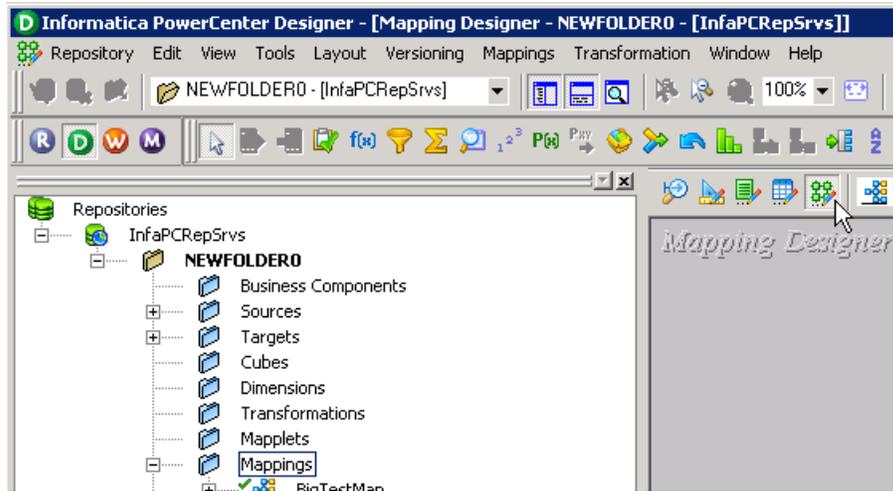

Note: As of Informatica Version 9.6.1 Hot Fix 2 and later, if you want to use the version of Vertica you downloaded and installed, select the Vertica option from the dropdown menu. If you intend to use the new Vertica Connector from Informatica, select VERTICA from the dropdown menu.

9. Click **OK**. You have imported a target table. Next, follow the procedure in, [Mapping Between Source and Target Tables](#).

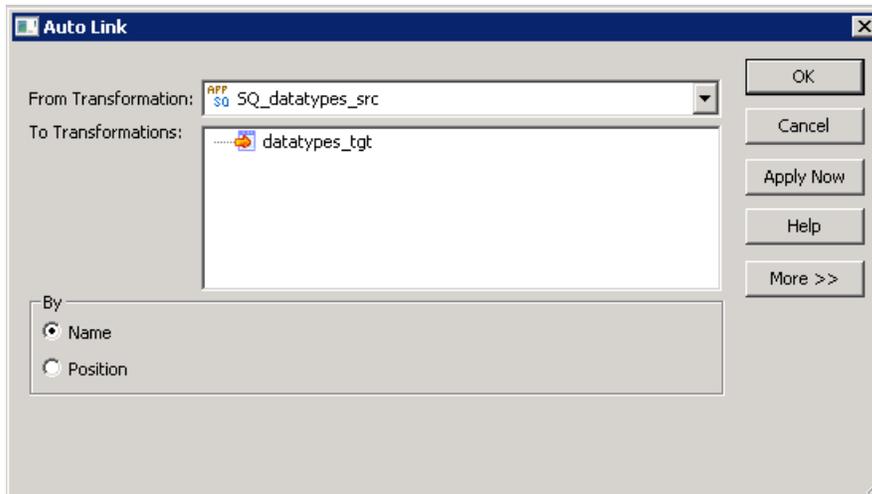

Mapping Between Source and Target Tables

Perform this procedure to create mapping between source and target tables.

1. In Informatica PowerCenter Designer, select the folder in the repository where you want to create your Vertica mapping.

2. Click the Mapping Designer icon.
3. From the **Mappings** list box, select **Create**.
4. Enter a mapping name and click **OK**.
5. Choose the source, **datatypes_src**, and drag it to the **Mapping Designer** window. An **Application Source Qualifier** also appears; your source is mapped to Informatica. (This example sets up a basic workflow and is not meant to be a realistic sample. Note also that this example shows that configuration changes would be required where both source and/or target are in Vertica databases.)
6. Drag your target, **datatypes_tgt**, to the **Mapping Designer** window.
7. From the **Layout** list box, select **Autolink by Name**.
8. Confirm the from and to transformations, and click **OK**.

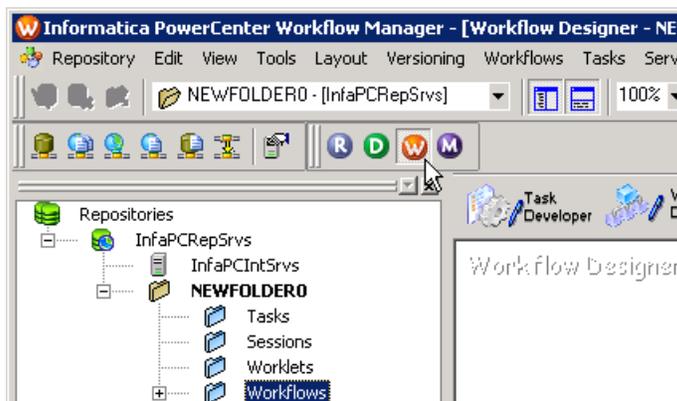

9. Save your work. Next, follow the procedure in, you create a workflow that uses your mapping. Follow the procedure in, [Creating a Workflow](#).

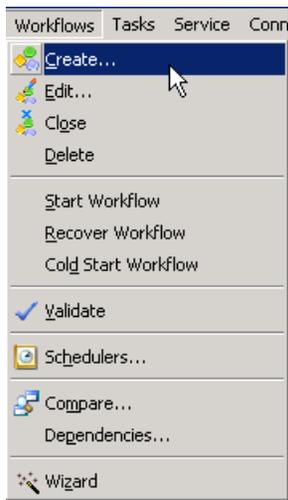

Creating a Workflow

Perform this procedure to create a workflow using the table mapping you previously created.

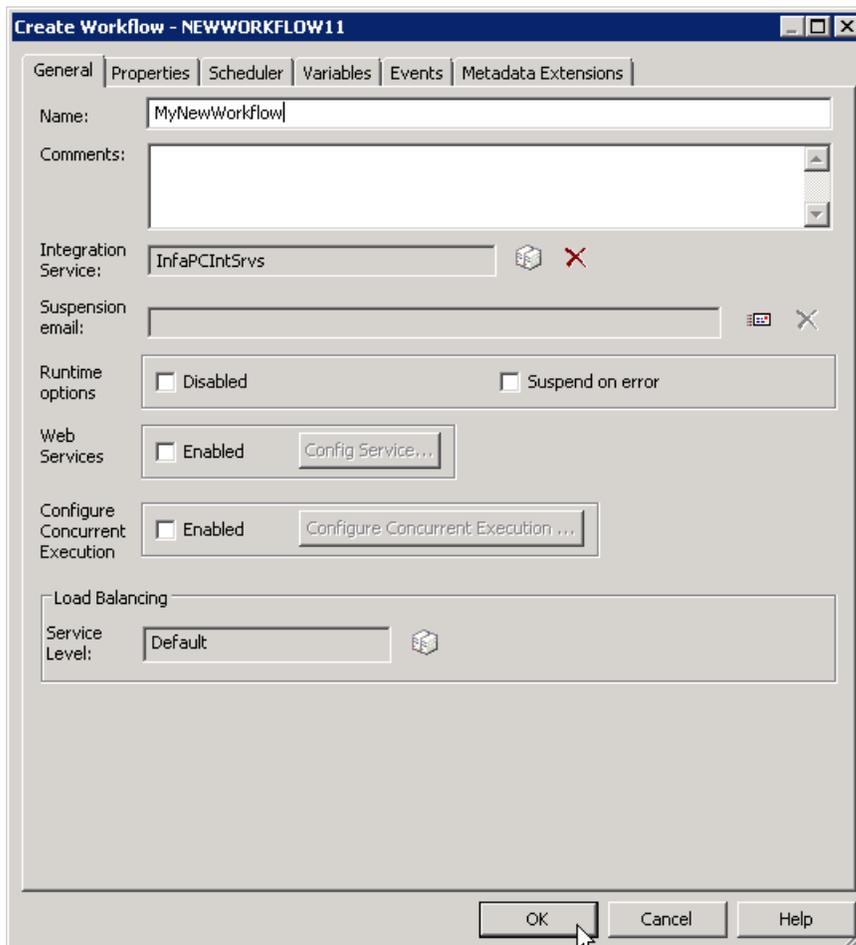

1. In Informatica PowerCenter, click the Workflow button to launch the Workflow Manager.

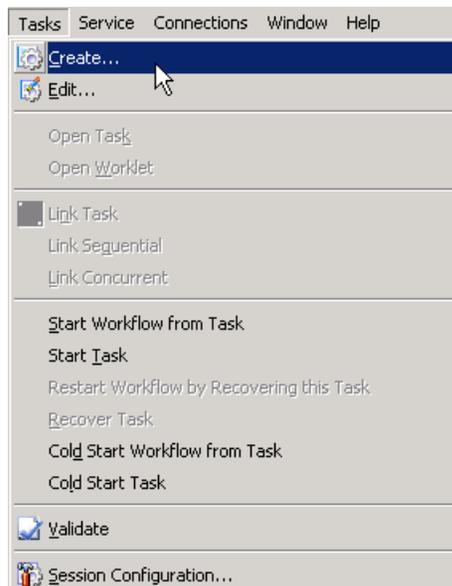

2. From the **Workflows** list box, select **Create**.

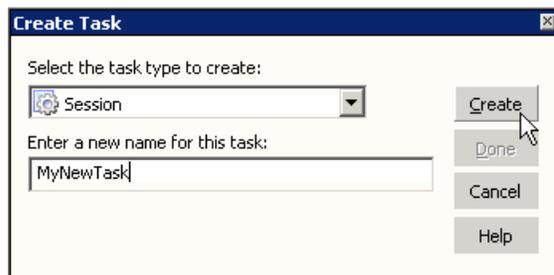

3. In the Create Workflow dialog box, enter a name for your new workflow and click **OK**.

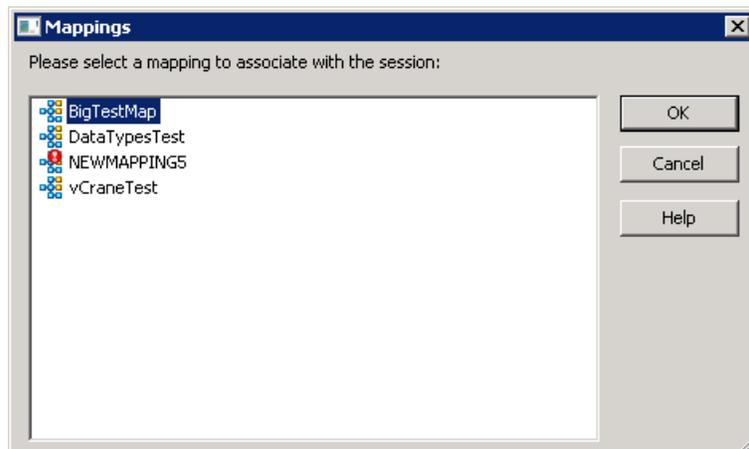

4. From the **Tasks** list box, select **Create**.

5. Enter a name for your new task, and click **Create**.

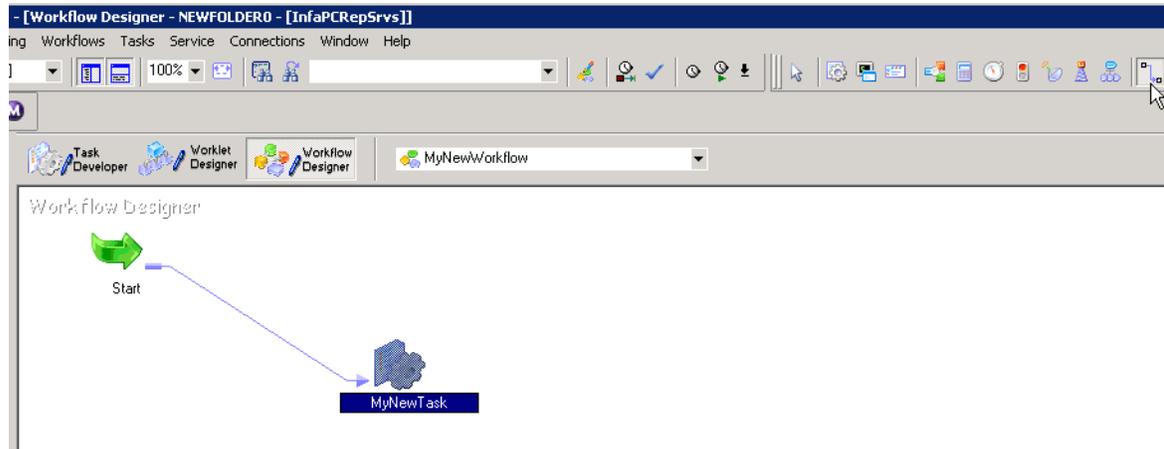

6. In the **Mappings** dialog box, choose the mapping to associate with the session and click **OK**.

7. Click **Done** on the Create Task dialog box.

8. In the Workflow Designer, drag your task to the right of **Start**.
9. Select the link tasks icon, and link **Start** to your task. Save your work.

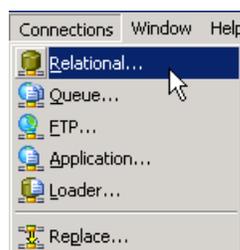

Next you configure your workflow connection to your database. Follow the procedure in, [Configuring Your Workflow Connections](#).

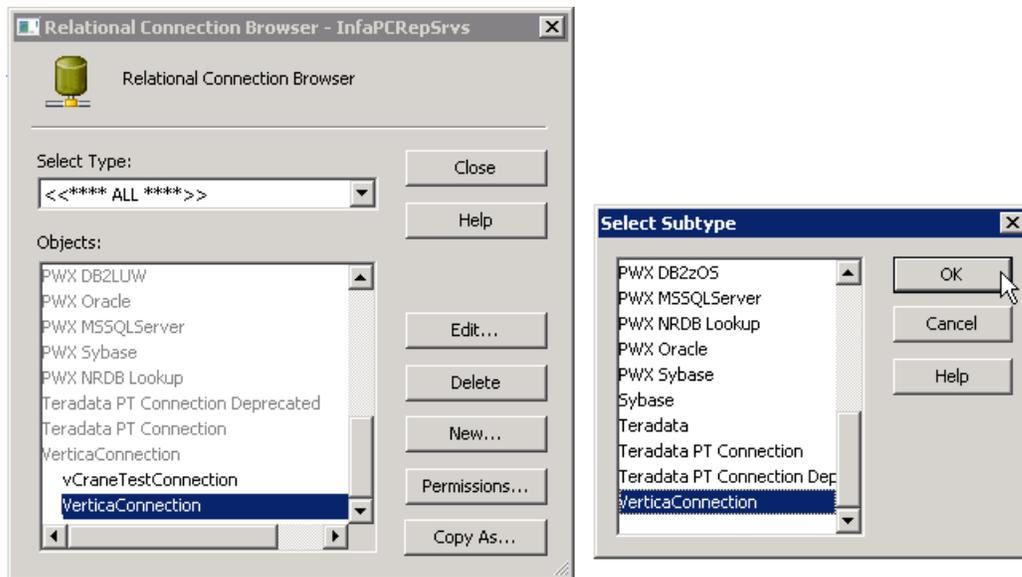

Configuring Your Workflow Connections

Perform this procedure to configure your workflow connection to your database.

1. While in Workflow Manager, from the **Connections** list box, select **Relational**.

2. From the **Relational Connection Browser** dialog box, select your Vertica connection object and click **New**.
3. From the **Select Subtype** dialog box, select **VerticaConnection** and click **OK**.

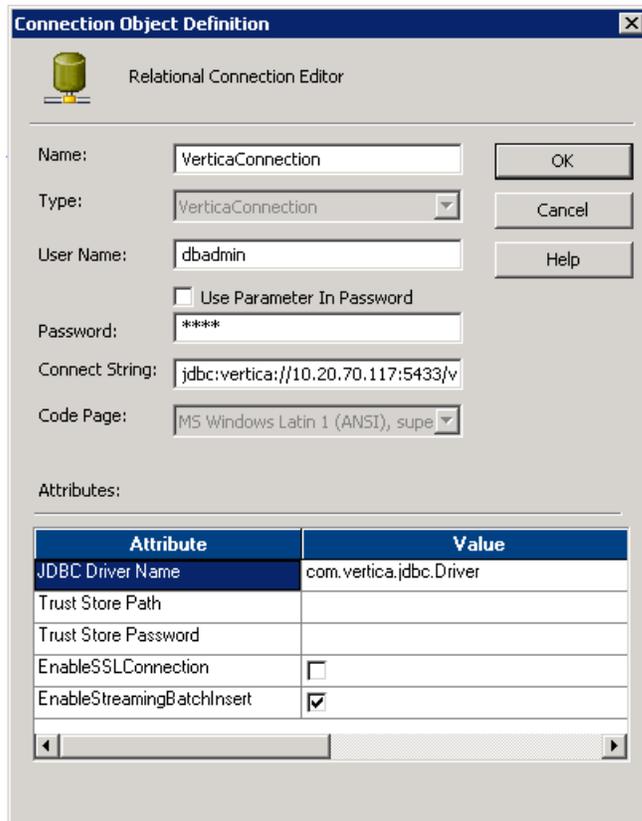

4. Fill in the details within the Connection Object Definition dialog box.
 - a. Fill in the **Name**, **User Name**, and **Password**.
 - b. Enter the connection string, which must have the format:
`jdbc:vertica://<ip>:<port>/<dbname>`
 - c. In the **JDBC Driver Name** field, enter **com.vertica.jdbc.Driver**
 - d. If you are connecting to a database that is running Vertica Release 8.1.x, select **EnableStreamingBatchInsert**.

Important: If you are running Vertica Release 7.x on either source or target database, enable (check off) **EnableStreamingBatchInsert**. Note that if you are running a previous version of Vertica you can still check **EnableStreamingBatchInsert**; previous versions will not experience the performance improvements, but setting the option has no detrimental impact.

- e. If your Vertica database is SSL enabled, check **EnableSSLConnection**, and enter a **Trust Store Path** and **Trust Store Password**.

Note: You must enter a complete path for Trust Store Path (e.g., C:\Users\Administrator\Desktop\verticastore).

- f. Click **OK**.

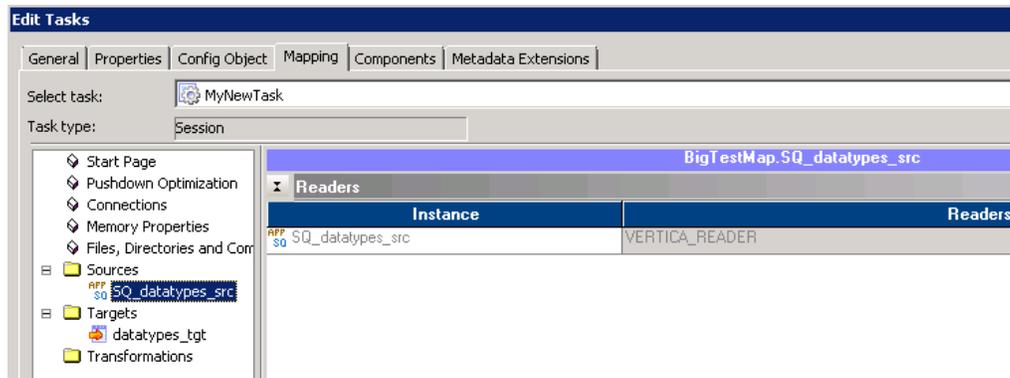

Next you configure your source and target for the workflow. Follow the procedure in, [Configuring Source and Target and Starting Your Workflow](#).

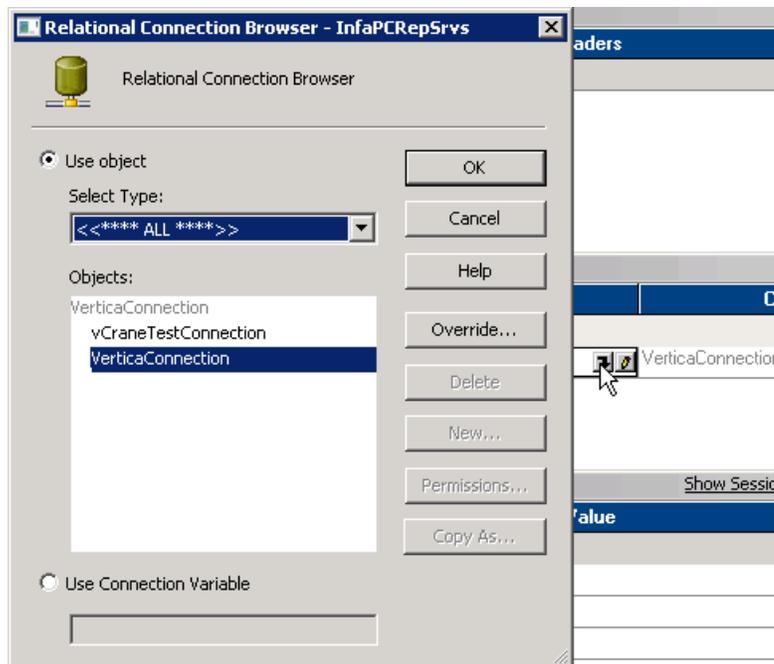

Configuring Source and Target and Starting Your Workflow

Perform this procedure to configure source and target for your workflow. (This procedure assumes all previous procedures have been completed.)

1. While in Workflow Designer, double-click your task to launch the **Edit Tasks** dialog box.
2. Click the **Mapping** tab.
3. Configure the source.
 - a. Under the **Sources** folder, select your source. The **VERTICA_READER** is listed under **Readers**.

b. Click the down arrow icon to bring up the **Relational Connection Browser** dialog box.

c. Choose your object and click **OK**.

4. Configure the target.

a. Under the **Targets** folder, select your target. The **VERTICA_WRITER** is listed under **Writers**.

b. Click the down arrow icon to bring up the **Relational Connection Browser** dialog.

c. Choose your object and click **OK**. Save your work.

5. While in Workflow Manager, from the Workflows list box, select **Start Workflow**. (The Workflow Monitor opens.)

Accessing and Setting Plug-in Features

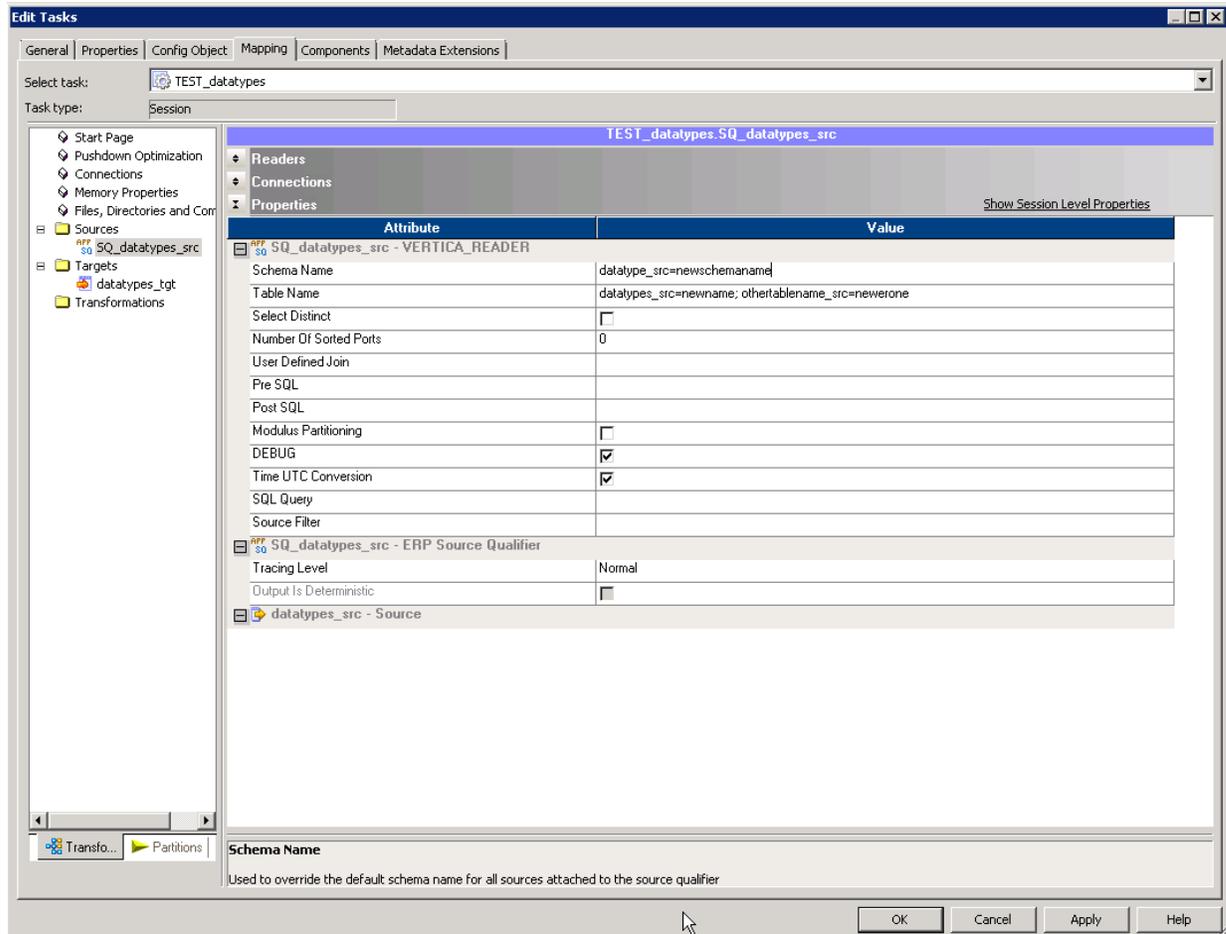

You can access the Vertica plug-in features through any workflow task. This section discusses how to access the features available through the Vertica plug-in.

Accessing VERTICA_READER Plug-in Attributes

Note that, when you use Vertica as source/reader, the plug-in supports only pass-through partitioning. When you use Vertica as target/writer, the plug-in supports pass-through partitioning and key range partitioning. (Note that the key value partitioning source should not be through the Vertica plug-in.)

1. While in Workflow Manager, double-click any task.
2. In the **Edit Tasks** dialog, select the Mappings tab.
3. Select your source qualifier (this example uses `SQ_datatypes_src`).
4. Minimize the **Readers** and **Connections** areas to focus on **Properties**.

Plug-in features are listed under the Properties area.

The table that follows lists and describes the plug-in attributes for source/reader.

Attribute	Value
Schema Name	<p>Schema Name allows you to override the default schema name of the mapped table. If you have only one source, you can override the schema name by simply entering the new schema name.</p> <p>Where you have many sources in a mapping that all go to the one source qualifier, you override schema names with the following format. Use a semicolon as separator:</p> <p><code><old_table_name>=<new_schema_name>; <another_table_name>=<another_new_schema_name></code></p> <p>Important: In the format given above, you do not actually enter the schema name to change the schema name. Instead, you enter the table</p>

Attribute	Value
	<p>name in the schema name field (to the left of the equal sign). You then provide the new schema name as given in the format above (to the right of the equal sign; the equal sign acts to set the new name). Use a semicolon as separator for multiple schema name changes.</p> <p>Example:</p> <pre>datatype_src=newschemaname</pre>
Table Name	<p>Table Name changes are similar to Schema Name changes in regards to how you format the changes. If you have only one table name to change, you just enter the new table name.</p> <p>If you have more than one table name to change, you use the following format:</p> <pre><old_table_name>=<new_table_name>; <another_table_name>=<another_new_table_name></pre> <p>Example:</p> <pre>datatypes_src=newname;othertablename_src=newerone</pre> <p>Important: If using the Schema Name option along with the Table Name option, note that the Schema Name entry uses the old table name versus the replacement name you have added here in the Table Name option. An example follows.</p> <p>Schema Name entry:</p> <ul style="list-style-type: none"> • <code>tbl1=new-schema-name</code> <p>Table Name entry:</p> <ul style="list-style-type: none"> • <code>tbl1=tbl2</code> <p>That is, you would not specify <code>tbl2</code> under the Schema Name entry.</p>
Select Distinct	If selected, returns only distinct values.
Number of Sorted Ports	Sorts incoming data, specifying order by ports.
User Defined	Allows you to do overrides to your mapping, enabling you to do very specific

Attribute	Value
Join	<p>joins (e.g., inner and outer joins). When you click the arrow to the right of the field, a SQL box pops up. What you enter in the box becomes a custom join clause added to the generated SQL statement.</p> <p>Basically you can enter a typical join statement with SELECT being assumed.</p> <p>Examples:</p> <ul style="list-style-type: none"> • <code>s1.a.col = s2.b.col</code> (where <code>s1</code> and <code>s2</code> are schema names) • <code>a JOIN b ON a.col = b.col</code> • <code>a.col = b.col</code>
Pre SQL	<p>Enter complete SQL statements that run before you read a table.</p> <p>For example, truncate or add data to a table before you read it.</p>
Post SQL	<p>Enter complete SQL statements that run after you read a table.</p>
Modulus Partitioning	<p>If selected, performs modulus partitioning (no replication of data) rather than straight pass-through partitioning.</p> <p>Check this option only if using pass-through partitioning.</p>
Time UTC Conversion	<p>If selected, keeps time synchronized when you are using Vertica as both source and target. Time data changes to UTC time zone.</p> <p>Select this option and the writer option only when using Vertica as both source and target.</p> <p>If unchecked, when you are using Vertica as both source and target, time data changes to the JVM time zone.</p>
SQL Query	<p>Overrides the entire query rather than overriding just a portion of a query.</p>
Source Filter	<p>Allows you to do overrides to your mapping by overriding the WHERE clause (similar to the way User Defined Join allows you to override a join clause).</p>

Accessing VERTICA_WRITER Plug-in Attributes

1. While in Workflow Manager, double-click any task.
2. In the **Edit Tasks** dialog box, select the Mappings tab.
3. Select your source qualifier (this example uses `datatypes_tgt`).
4. Minimize the **Readers** and **Connections** areas to focus on **Properties**.

Plug-in features are listed under the **Properties** area.

The screenshot shows the 'Edit Tasks' dialog box with the 'Properties' tab selected. The task name is 'copylocalexceptiofile.tchar_tgt'. The 'Properties' section is expanded to show a table of attributes for the 'VERTICA_WRITER' plug-in. The table has two columns: 'Attribute' and 'Value'.

Attribute	Value
tchar_tgt - VERTICA_WRITER	
Schema Name	
Truncate target table option	<input checked="" type="checkbox"/>
Pre SQL	
Post SQL	
Target Table Name	
Copy Direct	<input type="checkbox"/>
Reject file directory	C:\
Reject filename	reject.txt
Insert	<input checked="" type="checkbox"/>
Delete	<input type="checkbox"/>
Update	None
Time UTC Conversion	<input type="checkbox"/>
Copy Local Method	Delimited
DEBUG	<input checked="" type="checkbox"/>
Target Number	0
tchar_tgt - Target	
Partial Load Recovery	None

The table that follows lists and describes the plug-in attributes for target/writer.

Attribute	Value
Schema Name	Change the schema name by entering a new name in this field.
Truncate Target Table	Select this option if you have a workflow that should truncate its targeted table before loading data.
Pre SQL	Enter complete SQL statements that run before you write to a table.
Post SQL	Enter complete SQL statements that run after you write to a table.
Target Table Name	Change the target table name by entering a new name in this field.
Copy Direct	When selected, writes directly to the ROS container. More efficient for bulk loading.
Reject file directory	Reject file directory and Reject file name work in tandem to record rejected rows. In this field you specify the directory path for the reject file.
Reject file name	Specify the name of the file that holds the rejected rows. There is one log file per partition. If there are multiple log files, a number is appended to the file names. For example, rejects.txt would become rejects_01.txt and rejects_02.txt.
Insert	If selected, makes insert the update strategy for the target.
Delete	If selected, makes delete the update strategy for the target.
Update	List box offers standard update options for target.
Time UTC Conversion	If selected, keeps time synchronized when you are using Vertica as both source and target. Time data changes to UTC time zone. Select this option and the reader option only when using Vertica as both source and target. If unchecked, when you are using Vertica as both source and target, time data changes to the JVM time zone.
Copy Local Method	Choose method from list box. None. The default; in this case, no local copy method is used to stream data. Important: To take advantage of increased performance of

Attribute	Value
	<p>EnableStreamingBatchInsert, you must set Copy Local Method to None.</p> <p>Delimited. Creates a stream with pipes and newline delimiters. This method fails if there are pipes or newline delimiters in the data you are transmitting.</p> <p>Native Varchar Converts to new format. Use if data is mostly some form of strings.</p> <p>Native binary Serializes java objects to Vertica objects.</p>
Target Number	<p>Default behavior. The Target Number default is zero. If you leave the default (or set Target Number to any number less than or equal to 1), the plug-in uses the IP address you specify in the Connection String when configuring workflow connections. See Configuring Your Workflow Connections for more information on where you specify the IP address.</p> <p>In regards to load balancing, the Target Number default operates as follows.</p> <ul style="list-style-type: none">• If the IP Address you specified in the Connection String is not an Vertica node, the plug-in targets that IP Address. Any load balancing policy enabled on the IP Address is used.• If the node you specified in the Connection String is an Vertica node, note the following: Vertica native connection load balancing is off by default; in this case, the plug-in uses the IP address you specify in the connection string. If Vertica load balancing is enabled, then the plug-in targets nodes as defined by the load balancing scheme on the Vertica node. <p>Non-default behavior. You override the plug-in's default behavior by setting the option Target Number to a value greater than 1 (up to 16). When the value of the Target Number is set to greater than 1, the plug-in targets that number of Vertica nodes and uses ROUNDROBIN as its load balancing scheme. This overrides the native Vertica load balancing scheme.</p> <p>For information on native connection load balancing, refer to, About About Native Connection Load Balancing in the Administrator's Guide. For information on setting a load balancing policy on a Vertica server, refer to SET_LOAD_BALANCE_POLICY in the SQL Reference Manual.</p>

Setting EnableStreamingBatchInsert

If you are connecting to a database that is running Vertica Release 8.1.x, for best performance, you should always implement **EnableStreamingBatchInsert**.

If you are running an earlier version of Vertica, setting **EnableStreamingBatchInsert** has no impact on performance.

Find the full procedure for accessing the setting in the section, [Configuring Your Workflow Connections](#). For a workflow that is already set up:

1. While in Workflow Manager, select a task.
2. From the **Connections** list box, select **Relational**.
3. Click **Edit**.
4. In the **Connection Object Definition** dialog box, check off **EnableStreamingBatchInsert**.
5. Click **OK**. Save your work.

Important: To take advantage of increased performance of **EnableStreamingBatchInsert**, you must set Copy Local Method to **None**.

Enabling SSL

If your Vertica database is SSL enabled, then within the **Connection Object Definition** dialog, check **EnableSSLConnection**, and enter a **Trust Store Path** and **Trust Store Password**.

Note: You must enter a complete path for **Trust Store Path** (e.g., C:\Users\Administrator\Desktop\verticastore).

For a simple example of where to access the SSL setting, refer to [Configuring Your Workflow Connections](#).

Best Practices

This section includes memory requirement considerations and other tips.

Setting Memory Properties for a Task

Micro Focus recommends that you increase memory allocation to improve performance.

Note: The default buffer size for Informatica PowerCenter is set very conservatively. These settings can cause PowerCenter to send Vertica many small batches, rather than a few large batches. The overhead of these many small batches can cause loading performance issues. To resolve these performance issues, you should change PowerCenter's batch size settings. Your specific settings depend upon your system resources and needs.

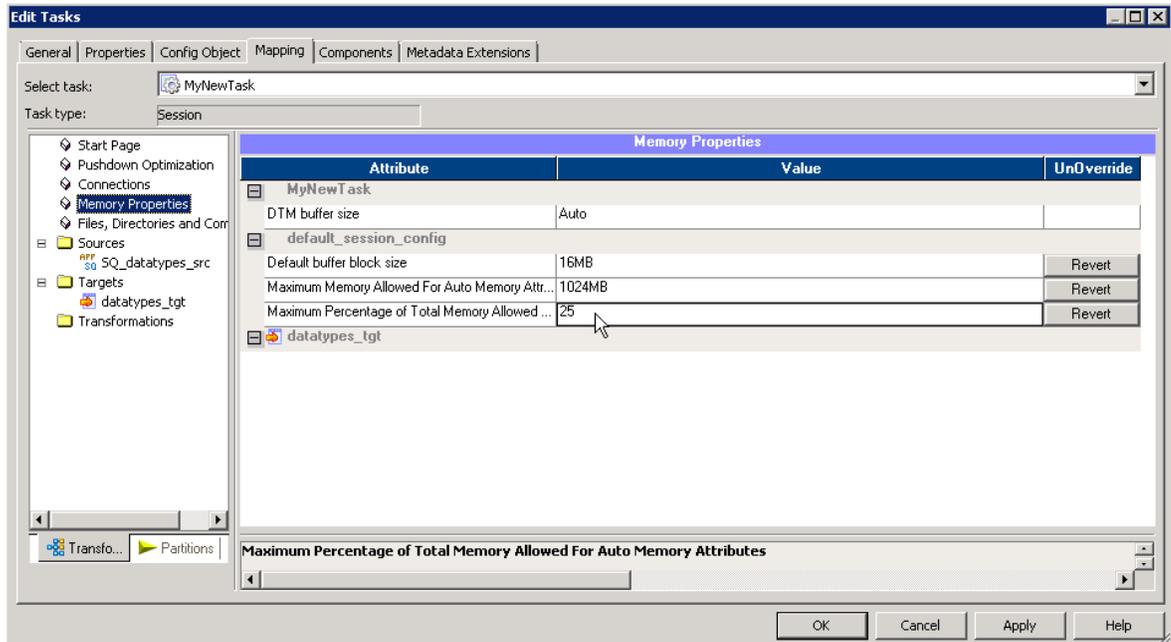

Perform the following procedure to increase memory allocation for a task.

1. While in Workflow Manager, double-click the task that connects to Vertica.
2. In the **Edit Tasks** dialog box, under the **Mapping** tab, select **Memory Properties**. Considering your task requirements and your system limitations, set the following attributes.

Note: Allocate more memory than mentioned here according to your system limitations and needs. The settings given may not be realistic for the tasks you intend to perform.

- a. Set **Default buffer block size** to at least 16 MB.
- b. Set **Maximum Memory Allowed for Auto Memory Attributes** to at least 512 MB.
- c. Set **Maximum Percentage of Total Memory Allowed for Auto Memory Attributes** to

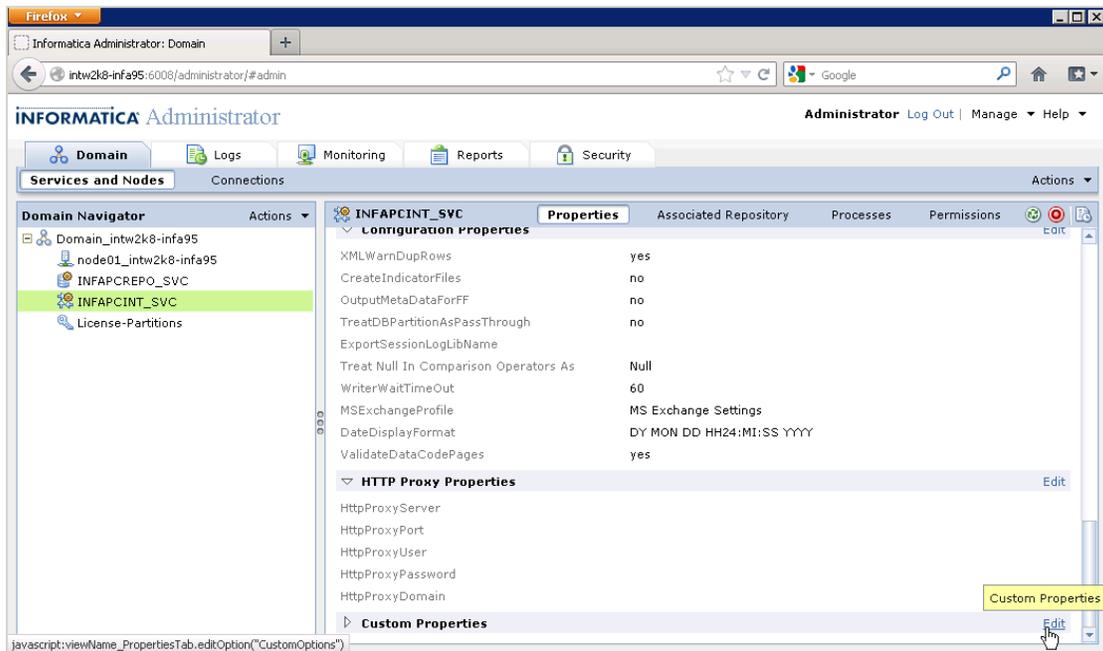

at least 25.

Setting JVM Memory Properties

Micro Focus recommends the following settings for your JVM (Java Virtual Machine).

1. Log on to the PowerCenter domain's Administration Console.
2. Select the **Domain** tab, and click **Services and Nodes**.
3. In the **Domain Navigator**, click the entry for the PowerCenter Integration Service.
4. Click **Edit** next to the **Custom Properties** section.

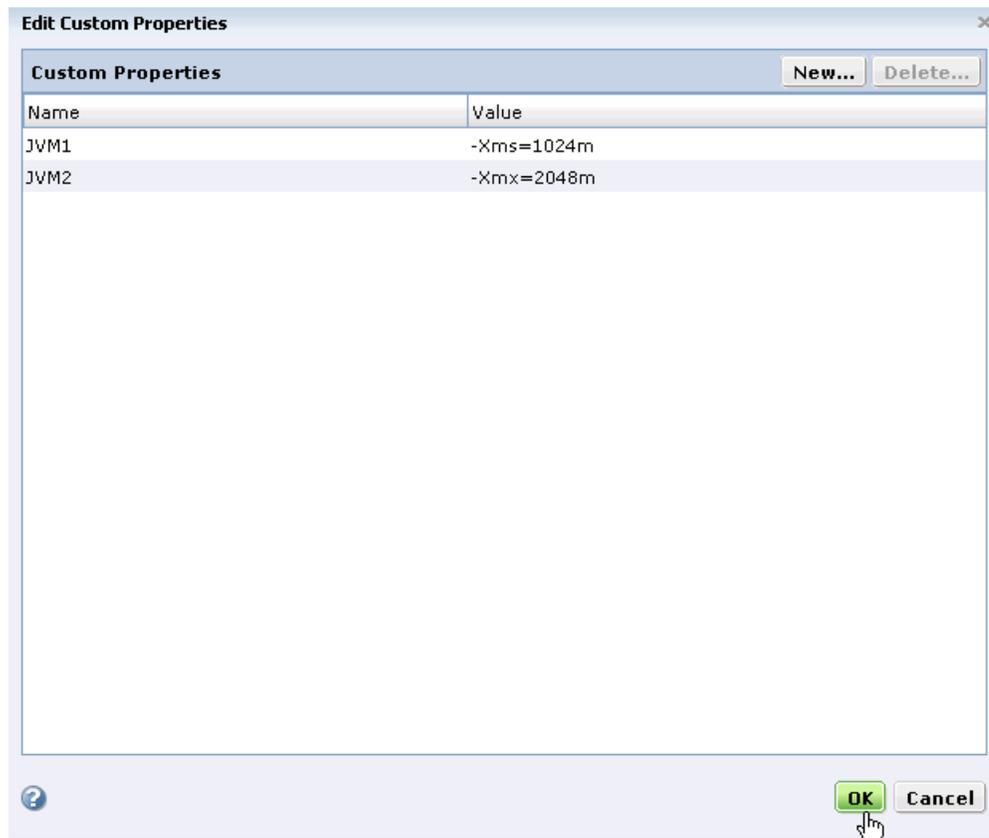

5. In the **Edit Custom Properties** dialog box, click **New**.
 - a. Enter a name.
 - b. Set a minimum heap memory size to at least 1024 m. Enter `-Xms=1024m`
 - c. Click **OK**.

6. In the **Edit Custom Properties** dialog box, click **New** again.
 - a. Enter a name.
 - b. Set a maximum heap memory size to at least double the minimum you just entered.

Enter `-Xmx=2048m`

c. Click **OK**.

Communicating when Informatica and Vertica Are on Different Networks

This best practice concerns communication with a Vertica cluster from Informatica when Informatica and Vertica are on separate networks. If Informatica and Vertica are on the same network, you do not need to implement the changes described here.

If Informatica and Vertica are on separate networks:

- Set up a public network for import/export and specify an export address for your individual nodes. See [Using Public and Private IP Networks](#) in the Administrator's Guide, specifically the section, [Identify the Database or Nodes Used for Import/Export](#). See also [ALTER DATABASE](#) and [ALTER NODE](#) in the SQL Reference manual for subnet and node-related tasks.

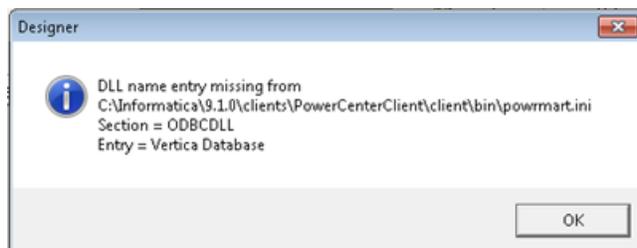

The Vertica plug-in for Informatica accesses the EXPORT_ADDRESS column of the V_Catalog schema. (For information on viewing the EXPORT_ADDRESS column, see the SQL Reference manual, specifically the section [NODES](#) in the [V_Catalog Schema](#).)

- Once the public network is set-up properly, and an export address is assigned to each node, Informatica can then read and write to a Vertica cluster on a different network.

Important: If you are using the Vertica plug-in for Informatica on Vertica Release 6.x, the Informatica user must have the PSEUDOSUPERUSER role to access the export addresses on the different network. For general information on the PSEUDOSUPERUSER role, see the Administrator's Guide, [PSEUDOSUPERUSER Role](#). If you are using Vertica Release 7.0.x, the Informatica user does not need the PSEUDOSUPERUSER role.

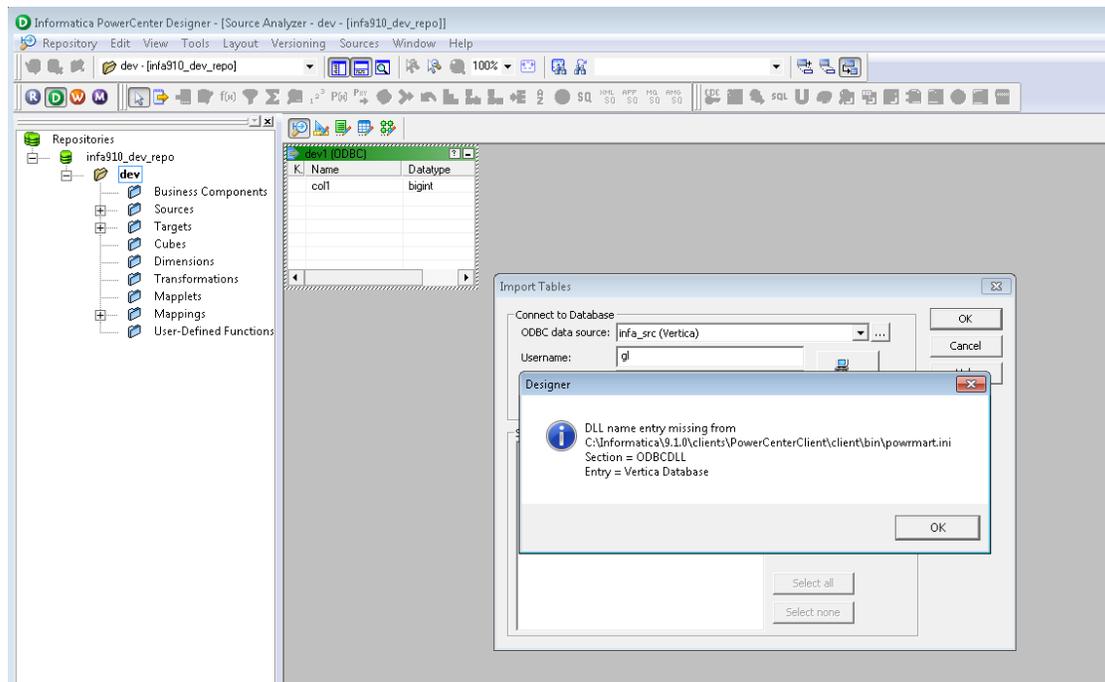

Modifying powrmart.ini

When reading or importing a table, you can receive a pop-up warning, such as the following, concerning a missing DLL.

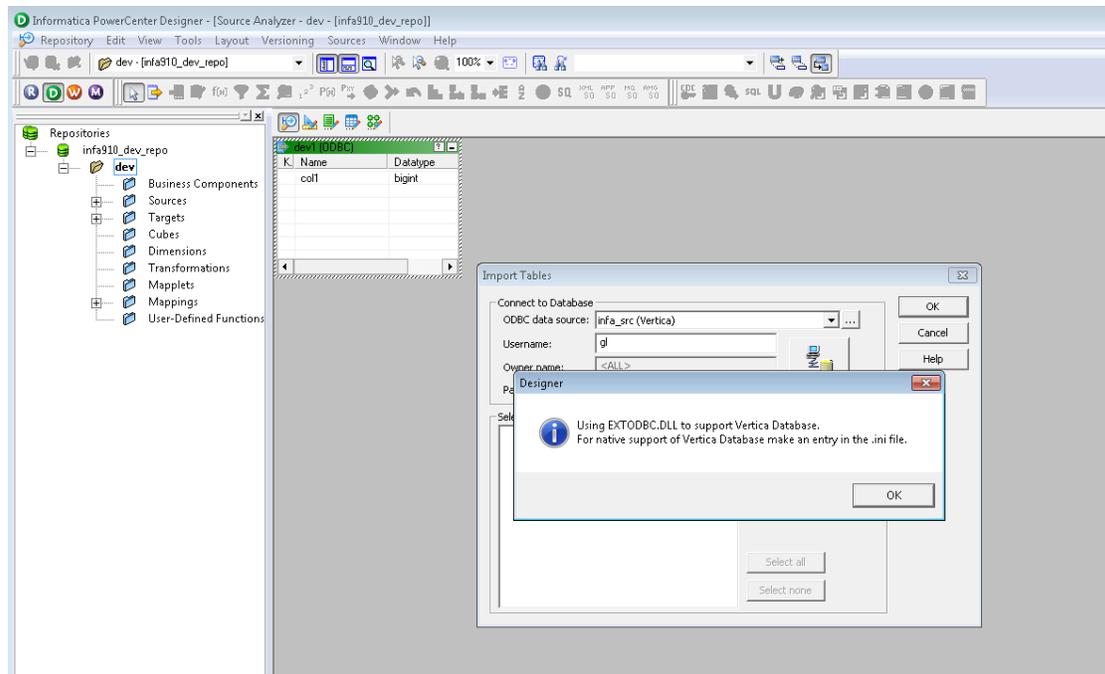

You can make a correction so that the warning no longer appears by adding the line `Vertica Database=PMODBC.DLL` to the `powrmart.ini` file in the section `ODBCDLL`. See the following example.

1. Using the Import Tables option in the Informatica PowerCenter Designer, the system displays a pop-up warning about a missing DLL. Click **OK**.

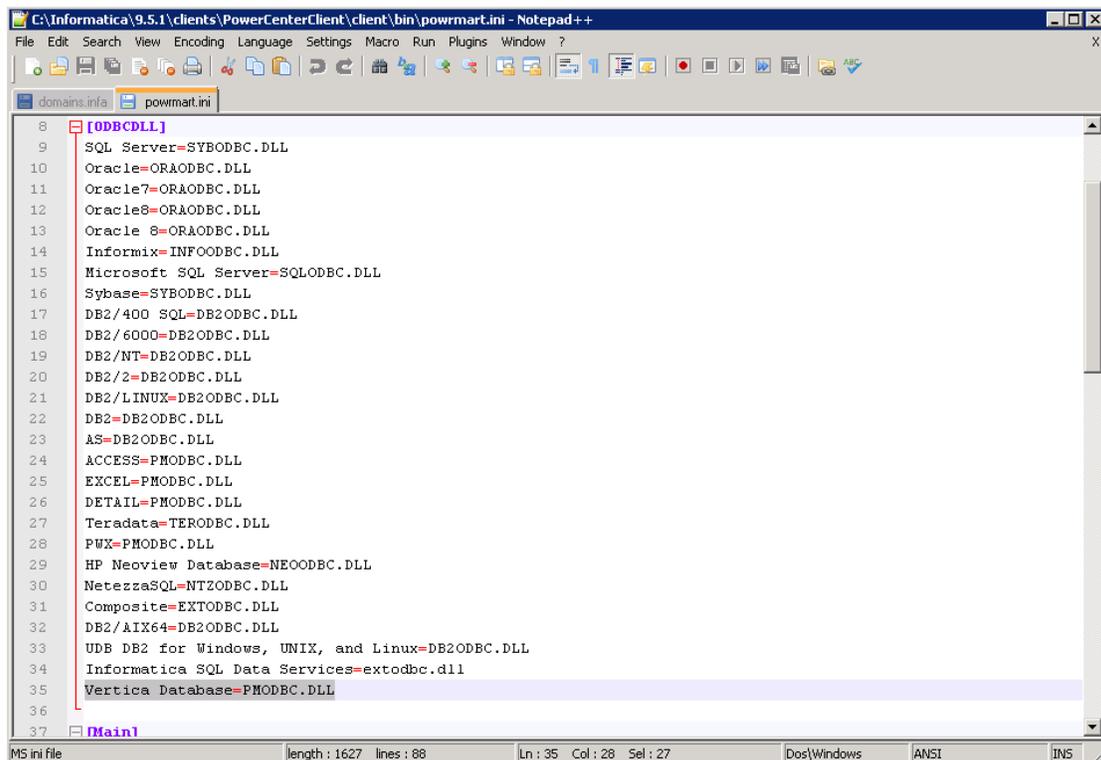

2. The system displays another pop-up letting you know that Informatica is using EXTODBC.DLL to support Vertica. Click OK.

Note: The two pop-up messages are warnings only and do not affect the import of tables or the execution of workflows.

3. Open the `powrmt.ini` file for editing.
4. Add the following line in the section `ODBCDLL`.

Vertica Database=PMODBC.DLL

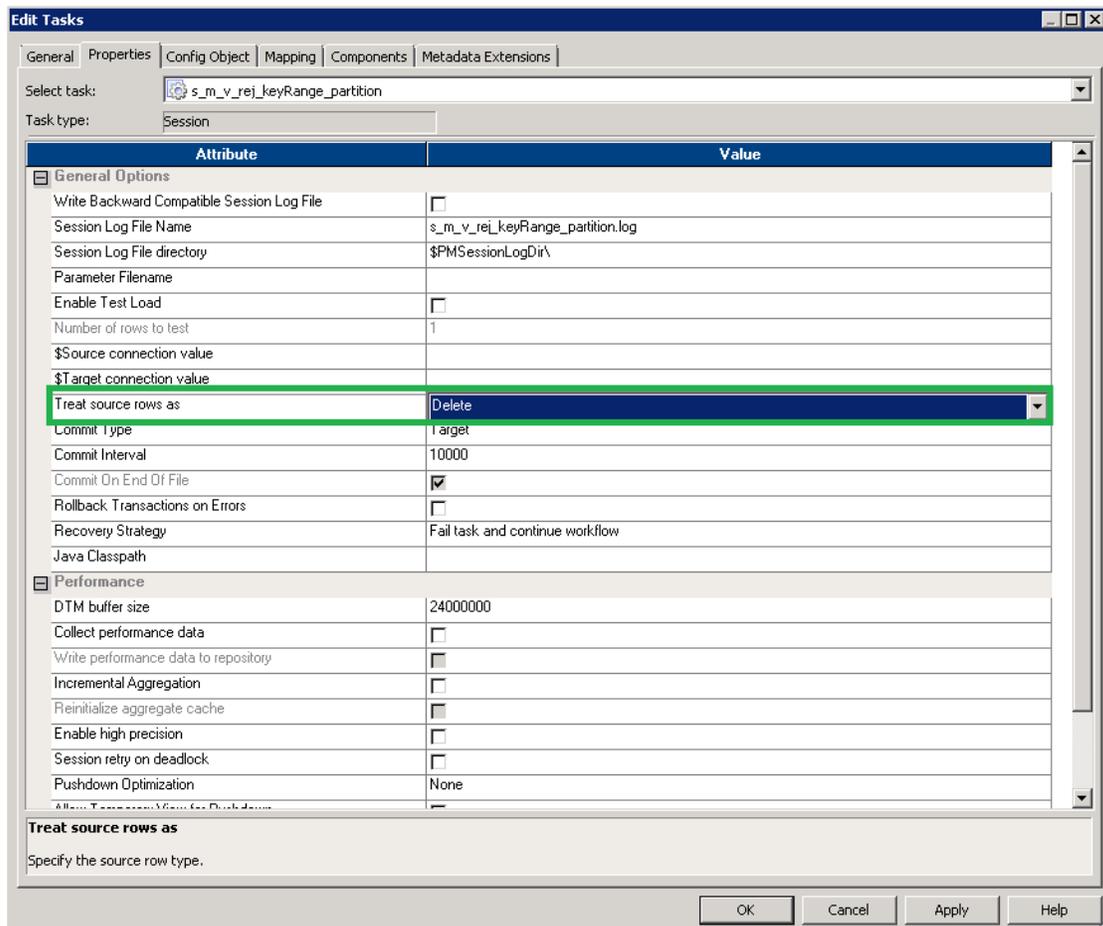

```
C:\Informatica\9.5.1\clients\PowerCenterClient\client\bin\powrmt.ini - Notepad++
File Edit Search View Encoding Language Settings Macro Run Plugins Window ?
domains.infa powrmt.ini
8 [ODBCDLL]
9 SQL Server=SYBODBC.DLL
10 Oracle=ORAODBC.DLL
11 Oracle7=ORAODBC.DLL
12 Oracle8=ORAODBC.DLL
13 Oracle 8=ORAODBC.DLL
14 Informix=INFOODBC.DLL
15 Microsoft SQL Server=SQLODBC.DLL
16 Sybase=SYBODBC.DLL

```

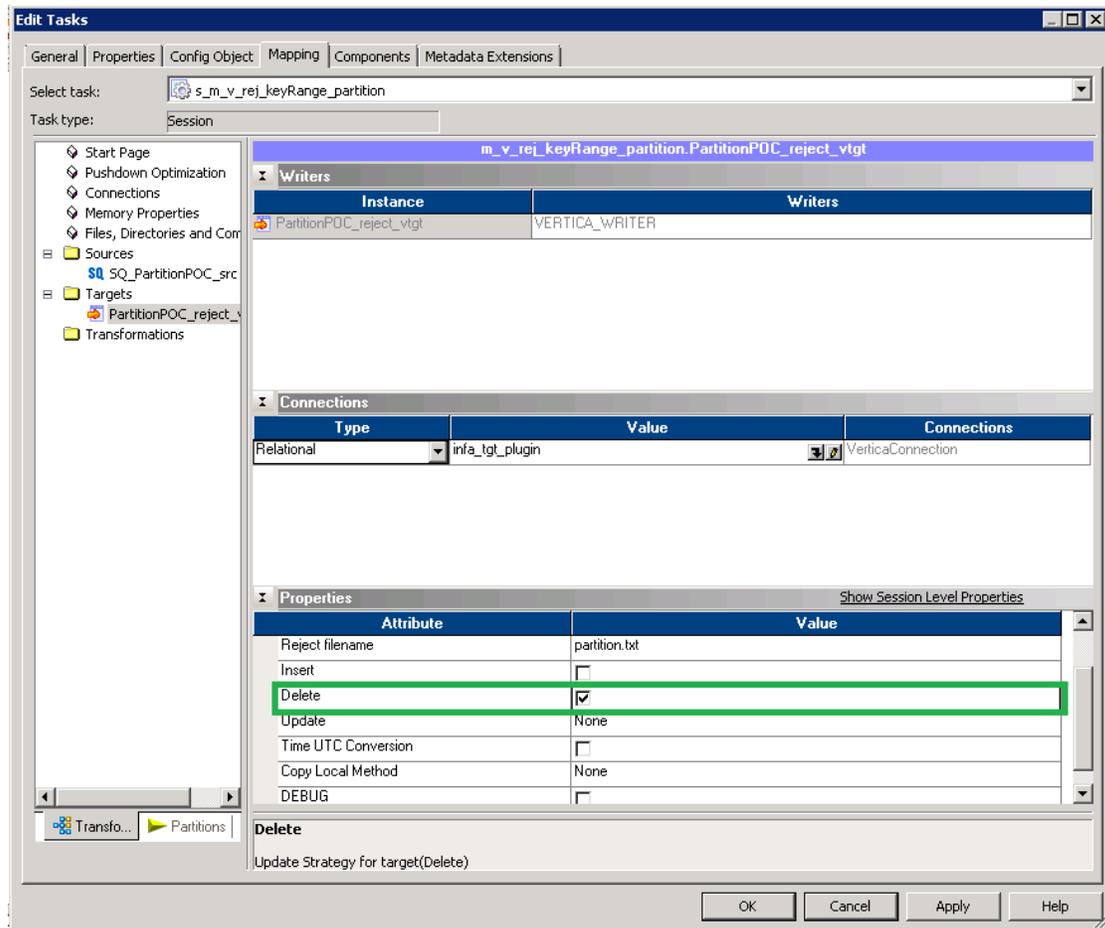

Deleting Records on a Target Table

Follow these notes to delete records on a target table.

1. On the target table, you must have defined a primary key. From **Edit Tasks**, select the **Properties** tab, and, under **General Options**, set **Treat Source row as** to **Delete**.

2. Also on the target table, from the **Edit Tasks** dialog, choose the **Mapping** tab. Under **Properties**, check-off **Delete**.

Vertica Error Messages

Welcome to the Vertica Error Codes guide. This guide is mainly for developers who need to understand how Vertica's error codes relate to error states returned by the ODBC and JDBC drivers.

The Different Ways Vertica Reports Errors

Vertica reports warnings and errors via two different mechanisms: SQLSTATEs and error messages. SQLSTATEs are intended for use by client applications, such as those accessing Vertica via ODBC or JDBC. Error messages are displayed to interactive users (for example, users connected to Vertica through vsql) and written to error logs.

About SQLSTATE

Vertica reports the success or failure of each statement it executes to client applications using a five-character SQLSTATE value. Many of these values are defined by the SQL standard. Others (identified by the letter "V" in their values) are Vertica-specific.

SQLSTATE values are grouped into classes which are defined by the first two characters in the SQLSTATE value. The last three characters indicate a specific condition within a class. For example, the SQLSTATE class 22 represents all data errors. The specific SQLSTATE value 22012 represents a division by zero error. SQLSTATE classes let an application that does not recognize a specific SQLSTATE value to still get a general idea of the result.

Warning and Error Messages

Each error and warning message displayed to interactive users or written to a log file by Vertica has its own numeric error code assigned to it. For example:

```
ERROR 3117: Division by zero  
WARNING 4098: No projections found  
ERROR 5617: Multiple WITH clauses not allowed
```

The error code number is not related to the SQLSTATE value. However, error and warning messages do correspond to a specific SQLSTATE. They are just a more-specific human-readable message compared to the SQLSTATE, which is mainly intended for client applications.

For example, all warning messages displayed by Vertica correspond to the SQLSTATE class 01. The warning message "WARNING 3084: Design Workspace couldn't be dropped" corresponds to the SQLSTATE value 01000 ERRCODE_WARNING.

Error codes do not change between Vertica releases, but individual error and warning messages may be added or removed in new releases. Your client application should not depend on particular error code appearing from one release to the next. Instead, it should use the SQLSTATE value to determine the result of executing a statement.

See the [SQL State List](#) for a list of all the SQLSTATE classes and values defined by Vertica. This table also links to lists of error or warning messages that are associated with each SQLSTATE value.

SQL State List

The following table lists the SQLSTATE classes and individual SQLSTATE codes.

SQLState	Description	Details
Class 00—Successful Completion		
00000	ERRCODE_SUCCESSFUL_COMPLETION	
Class 01—Warning		
01000	ERRCODE_WARNING	associated warning messages
01003	ERRCODE_WARNING_NULL_VALUE_ELIMINATED_IN_SET_FUNCTION	
01004	ERRCODE_WARNING_STRING_DATA_RIGHT_TRUNCATION	associated warning messages
01006	ERRCODE_WARNING_PRIVILEGE_NOT_REVOKED	associated warning messages
01007	ERRCODE_WARNING_PRIVILEGE_NOT_GRANTED	associated warning messages
01008	ERRCODE_WARNING_PRIVILEGE_ALREADY_GRANTED	
01009	ERRCODE_WARNING_PRIVILEGE_ALREADY_REVOKED	
0100C	ERRCODE_WARNING_DYNAMIC_RESULT_SETS_RETURNED	
01V01	ERRCODE_WARNING_DEPRECATED_FEATURE	associated warning messages
01V02	ERRCODE_WARNING_QUERY_RETRIED	
Class 02—No Data		
02000	ERRCODE_NO_DATA	
02001	ERRCODE_NO_ADDITIONAL_DYNAMIC_RESULT_SETS_RETURNED	

SQLState	Description	Details
Class 03—SQL Statement Not Yet Complete		
03000	ERRCODE_SQL_STATEMENT_NOT_YET_COMPLETE	
Class 08—Client Connection Exception		
08000	ERRCODE_CONNECTION_EXCEPTION	associated error messages
08001	ERRCODE_SQLCLIENT_UNABLE_TO_ESTABLISH_SQLCONNECTION	associated error messages
08003	ERRCODE_CONNECTION_DOES_NOT_EXIST	associated error messages
08004	ERRCODE_SQLSERVER_REJECTED_ESTABLISHMENT_OF_SQLCONNECTION	
08006	ERRCODE_CONNECTION_FAILURE	associated error messages
08007	ERRCODE_TRANSACTION_RESOLUTION_UNKNOWN	
08V01	ERRCODE_PROTOCOL_VIOLATION	associated error messages
Class 09—Triggered Action Exception		
09000	ERRCODE_TRIGGERED_ACTION_EXCEPTION	associated error messages
Class 0A—Feature Not Supported		
0A000	ERRCODE_FEATURE_NOT_SUPPORTED	associated error messages
0A005	ERRCODE_PLAN_TO_SQL_NOT_SUPPORTED	associated error messages
Class 0B—Invalid Transaction Initiation		
0B000	ERRCODE_INVALID_TRANSACTION_INITIATION	associated error messages

SQLState	Description	Details
Class 0F—Locator Exception		
0F000	ERRCODE_LOCATOR_EXCEPTION	
0F001	ERRCODE_L_E_INVALID_SPECIFICATION	
Class 0L—Invalid Grantor		
0L000	ERRCODE_INVALID_GRANTOR	
0LV01	ERRCODE_INVALID_GRANT_OPERATION	associated error messages
Class 0P—Invalid Role Specification		
0P000	ERRCODE_INVALID_ROLE_SPECIFICATION	
Class 21—Cardinality Violation		
21000	ERRCODE_CARDINALITY_VIOLATION	
Class 22—Data Exception		
22000	ERRCODE_DATA_EXCEPTION	associated error messages
22001	ERRCODE_STRING_DATA_RIGHT_TRUNCATION	associated error messages
22002	ERRCODE_NULL_VALUE_NO_INDICATOR_PARAMETER	
22003	ERRCODE_NUMERIC_VALUE_OUT_OF_RANGE	associated error messages
22004	ERRCODE_NULL_VALUE_NOT_ALLOWED	associated error messages
22005	ERRCODE_ERROR_IN_ASSIGNMENT	
22007	ERRCODE_INVALID_DATETIME_FORMAT	associated error messages
22008	ERRCODE_DATETIME_FIELD_OVERFLOW	associated error messages

SQLState	Description	Details
22009	ERRCODE_INVALID_TIME_ZONE_DISPLACEMENT_VALUE	associated error messages
2200B	ERRCODE_ESCAPE_CHARACTER_CONFLICT	associated error messages
2200C	ERRCODE_INVALID_USE_OF_ESCAPE_CHARACTER	
2200D	ERRCODE_INVALID_ESCAPE_OCTET	associated error messages

Warning Messages Associated with SQLSTATE 01000

This topic lists the warnings associated with the SQLSTATE 01000.

SQLSTATE 01000 Description

ERRCODE_WARNING

Warning messages associated with this SQLState

WARNING 2021: *string* Directory for errors files was not created.
Unable to write errors for this instance of COPY command

WARNING 2022: *string* Directory for exceptions files was not created.
Unable to write errors for this instance of COPY command

WARNING 2023: *string* Directory for rejected data files was not created.
Unable to write errors for this instance of COPY command

WARNING 2362: Cannot begin transaction; transaction is already running

WARNING 3084: Design couldn't be dropped

WARNING 3152: Duplicate values in columns marked as UNIQUE will now be ignored for the remainder of your session or until `reenable_duplicate_key_error()` is called

WARNING 3372: Failed to disable profiling: *string*

WARNING 3373: Failed to enable profiling: *string*

WARNING 3539: Incorrect results are possible. Please contact Vertica Support if unsure

WARNING 3791: Invalid view *string*: *string*

WARNING 4071: NO COMMIT option will be ignored for external table "*string*"

WARNING 4088: No new valid default roles specified. Retaining previous set of default roles for user *string*

WARNING 4098: No projections found

WARNING 4102: No rows are inserted into table "*string*". "*string*" because ON COMMIT DELETE ROWS is the default for create temporary table

WARNING 4116: No super projections created for table *string*.

WARNING 4246: Only GLOBAL scope is supported for clearing *string* profiles

WARNING 4463: Projection *string* is not up to date

WARNING 4468: Projection `<string>` is not available for query processing. Execute the `select start_refresh()` function to copy data into this projection.
The projection must have a sufficient number of buddy projections and all nodes must be up before starting a refresh

WARNING 4792: Storage option "*string*" will be ignored for external table "*string*"

WARNING 4871: System view *string* for tuning rule *string* is currently invalid

WARNING 4873: System view for tuning rule *string* does not exist

WARNING 4996: This request may deadlock the system. Please report the details to technical support

WARNING 5068: Total declared length of columns of one of the constraints exceeds the limit, truncation may happen

WARNING 5119: UDX code didn't respond when Vertica tried to get function prototype for *string* in library *string*: *string*

WARNING 5448: View *string* is currently invalid

WARNING 5451: Violations of some of foreign key constraints may not be reported because of no privilege on the foreign tables

WARNING 5642: Projection *string* is not persistent or not up to date; it will not be copied

WARNING 5643: Projection *string* is prejoin projection; it will not be copied

WARNING 5717: No statistics has been exported. Either the DB is empty or you try to export an external table or you do not have access to the available objects

Vertica Documentation

Vertica Error Messages

WARNING 5724: Segmentation clause contains a *string* - data loads may be slowed significantly

WARNING 5727: Sort clause contains a *string* - data loads may be slowed significantly

WARNING 5741: View *string* depends on other relations

WARNING 5819: Design could not be reset

WARNING 5821: Detected keys sharing the same case-insensitive key name

WARNING 5860: Due to the data isolation of temp tables with an on-commit-delete-rows policy, the `compute_flextable_keys()` and `compute_flextable_keys_and_build_view()` functions cannot access this table's data. The `build_flextable_view()` function can be used with a user-provided keys table to create a view, but involves a DDL commit which will delete the table's rows

WARNING 5873: Failed to add table *string* of hcatalog schema *string* to catalog: *string*

WARNING 5875: Failed to alter table *string* of hcatalog schema *string* to catalog: *string*

WARNING 5880: Failed to describe table *string* in hcatalog database *string*: *string*

WARNING 5881: Failed to describe table *string* in schema *string*: HCatalog database *string* does not exist

WARNING 5884: Failed to list hcatalog tables of hcatalog schema *string*: *string*

WARNING 5886: Failed to mirror table *string* in schema *string*: *string*

WARNING 5909: Found and ignored keys with names longer than the maximum column-name length limit

WARNING 5912: HASH() arguments contain irregular expressions

WARNING 5917: Ignored some keys since the total key count exceeds the view column limit

WARNING 5922: Insufficient privileges to alter table *string*

WARNING 5923: Insufficient privileges to drop table *string*

WARNING 5991: Projection basename "*string*" hint was ignored. "*string*" is used as the basename

WARNING 5993: Projection is irregularly segmented by column

WARNING 6053: The view creation involved a DDL commit which deleted the table's rows

WARNING 6256: Error while analyzing constraint(s) *string* on *string*

WARNING 6257: Error while creating LTT for analyzing constraints on *string*

WARNING 6356: No partitions have been swapped. Neither table has partitions fall in range

WARNING 6417: Swapped partitions are not immediately moved to a new storage location

WARNING 6515: Projection with name "*string*" already exists in schema "*string*" for anchor table "*string.string*"

WARNING 6565: Inequal query trees produced the same hash code query1:
string
query2:
string

WARNING 6594: Unknown RangeTblEntry: *value*

WARNING 6608: *string* is an invalid argument for hint *string*

WARNING 6765: Error parsing distrib value *string* in Distrib hint's arguments. The whole hint will be ignored

WARNING 6773: Failed to compare plans for query '*string*'

WARNING 6797: Hint *string* can accept at most one argument, the hint with *value* arguments is ignored

WARNING 6798: Hint *string* can be specified only once for each join, if multiple instances listed only the first is considered

WARNING 6799: Hint *string* is not feasible and will be ignored

WARNING 6801: Hint *string* requires exactly two arguments, the hint with *value* arguments is ignored

WARNING 6813: Inherited privileges are globally disabled; schema parameter is set but has no effect

WARNING 6814: Inherited privileges are globally disabled; table parameter is set but has no effect

Vertica Documentation

Vertica Error Messages

WARNING 6815: Inherited privileges are globally disabled; view parameter is set but has no effect

WARNING 6818: Input operations specified for Hint *string* is not feasible and will be ignored

WARNING 6922: Projection name was changed to *string* because it conflicts with the basename of the table *string*

WARNING 6990: Text index has invalid tokenizer

WARNING 6991: The active saved plan for this query has incompatible output column set. Continuing with the original query

WARNING 7000: The projection '*string*' was used to enforce the enabled key constraint '*string*', and may be regenerated to validate a DML statement on the base table

WARNING 7020: Unable to find the following query in the export file: '*string*'

WARNING 7030: Unexpected group clause found during query comparison

WARNING 7031: Unexpected group clause found during query hashing

WARNING 7033: Unexpected sort clause found during query comparison

WARNING 7036: Unknown Expr:*value* during query comparison

WARNING 7037: Unknown Expr:*value* found

WARNING 7038: Unknown Expr:*value* found during query hashing

WARNING 7039: Unknown Inequality OpOid:*value* found during query hashing

WARNING 7040: Unknown Logic OpExpr:*value* found during query comparison

WARNING 7041: Unknown Logic OpExpr:*value* found during query hashing

WARNING 7044: Unknown OpExpr:*value* found during query comparison

WARNING 7045: Unknown OpExpr:*value* found during query hashing

WARNING 7046: Unknown RangeTblEntry:*value* found during query comparison

WARNING 7047: Unknown RangeTblEntry:*value* found during query hashing

WARNING 7048: Unknown Sublink:*value* found during query comparison

WARNING 7049: Unknown Sublink:*value* found during query hashing

WARNING 7052: Unsupported JoinExpr Type found during query comparison

WARNING 7053: Unsupported JoinExpr Type found during query hashing

WARNING 7070: View "*string*" will include privileges from schema "*string*"

WARNING 7074: You appear to be using an old version of HDFS that may have stability problems under high load. See the Vertica documentation for supported HDFS versions

WARNING 7186: Inherited privileges are globally disabled. Privileges will be materialized and visibility of table *string* may change

WARNING 7204: Updates on the target table with a prejoin projection might ignore PK constraints and cause data integrity violations

WARNING 7265: Inherited privileges are globally disabled. Privileges will be materialized and visibility of view *string* may change

WARNING 7709: Could not drop table '*string*'. Please remove manually if necessary.
Detail: *string*

WARNING 7752: Cannot make a local query plan for "try local" hint, please check hash function, segment quantity, segment boundary, etc

WARNING 7793: The cache will be set to 1 instead

WARNING 7942: Unknown expression found during hashing: *value*

WARNING 7994: Not converged before max_iterations [*value*]

WARNING 8012: The parameter [*string*] is not defined for this function

Note: For information about troubleshooting Vertica error messages, see the [Vertica Knowledge Base](#) and the [Vertica Forum](#).

Warning Messages Associated with SQLSTATE 01004

This topic lists the warnings associated with the SQLSTATE 01004.

SQLSTATE 01004 Description

ERRCODE_WARNING_STRING_DATA_RIGHT_TRUNCATION

Warning messages associated with this SQLState

WARNING 7166: client_label exceeded maximum length; truncated to 255 characters

Note: For information about troubleshooting Vertica error messages, see the [Vertica Knowledge Base](#) and the [Vertica Forum](#).

Warning Messages Associated with SQLSTATE 01006

This topic lists the warnings associated with the SQLSTATE 01006.

SQLSTATE 01006 Description

ERRCODE_WARNING_PRIVILEGE_NOT_REVOKED

Warning messages associated with this SQLState

WARNING 4925: The string "string" cannot be string string "string"

Note: For information about troubleshooting Vertica error messages, see the [Vertica Knowledge Base](#) and the [Vertica Forum](#).

Warning Messages Associated with SQLSTATE 01007

This topic lists the warnings associated with the SQLSTATE 01007.

SQLSTATE 01007 Description

ERRCODE_WARNING_PRIVILEGE_NOT_GRANTED

Warning messages associated with this SQLState

WARNING 5682: USAGE privilege on schema "*string*" also needs to be granted to "*string*"

Note: For information about troubleshooting Vertica error messages, see the [Vertica Knowledge Base](#) and the [Vertica Forum](#).

Warning Messages Associated with SQLSTATE 01V01

This topic lists the warnings associated with the SQLSTATE 01V01.

SQLSTATE 01V01 Description

ERRCODE_WARNING_DEPRECATED_FEATURE

Warning messages associated with this SQLState

WARNING 2693: Configuration parameter *string* has been deprecated; setting it has no effect
WARNING 4736: *set_local_segment_threshold* has been deprecated; setting it has no effect

WARNING 7399: Created prejoin projection '*string*'. Prejoin projections have been deprecated and will be removed in version 9.0

WARNING 7585: Using prejoin projection '*string*'. Prejoin projections have been deprecated and will be removed in version 9.0

WARNING 7768: HDFS Connector is deprecated. Use 'COPY FROM' syntax directly with 'hdfs://' scheme URLs

WARNING 7905: This API for optional parameters is deprecated

WARNING 8015: This API for deleting model is deprecated

WARNING 8016: This API for renaming model is deprecated

WARNING 8030: The owner parameter in `summarize_model` is deprecated

Note: For information about troubleshooting Vertica error messages, see the [Vertica Knowledge Base](#) and the [Vertica Forum](#).

Error Messages Associated with SQLSTATE 08000

This topic lists the errors associated with the SQLSTATE 08000.

Error Messages Associated with SQLSTATE 0A000

This topic lists the errors associated with the SQLSTATE 0A000.

SQLSTATE 0A000 Description

ERRCODE_FEATURE_NOT_SUPPORTED

Error messages associated with this SQLState

ERROR 2009: *string* can not be used in function *string*

ERROR 2013: *string* clause is not supported for expressions

ERROR 2014: *string* Concatenated GZIP/BZIP is not supported with NATIVE/NATIVE VARCHAR formats

ERROR 2036: *string* is not a legal time unit

ERROR 2058: *string* VIEW is not supported

ERROR 2089: A correlated column in a subquery expression is not supported

ERROR 2114: ADD COLUMN over temporary tables is not supported

ERROR 2130: Aggregate function *string* (*value*) is not supported

ERROR 2133: Aggregate function calls cannot contain subqueries

Vertica Documentation

Vertica Error Messages

ERROR 2138: Aggregate functions can only be called on columns of a table

ERROR 2161: ALL subquery with a correlated expression is not supported

ERROR 2165: ALTER COLUMN TYPE over temporary tables is not supported

ERROR 2166: ALTER TABLE does not support ADD COLUMN with other clauses

ERROR 2167: ALTER TABLE does not support ALTER COLUMN TYPE with other clauses

ERROR 2168: ALTER TABLE does not support DROP COLUMN with other clauses

ERROR 2169: ALTER TABLE does not support SET SCHEMA with other clauses

ERROR 2178: An expression containing a correlated subquery with aggregate function is not supported

ERROR 2183: Analytic functions are not allowed in an ORDER BY on a UNION/INTERSECT/EXCEPT

ERROR 2184: Analytic functions are not supported in the ORDER BY of an analytic function OVER clause

ERROR 2190: Analytics query with having clause expression that involves aggregates and subquery is not supported

ERROR 2192: ANALYZE_CONSTRAINTS is currently not supported in non-default locales

ERROR 2208: Another Design/Deployment is in progress

ERROR 2210: ANTI join with segmented inner not supported

ERROR 2220: Argument *string* must not contain subqueries

ERROR 3352: Expressions in COPY may not contain analytic or Time Series Aggregate Functions

ERROR 3353: Expressions not supported in Times Series Aggregate Function

ERROR 3357: External tables only support files or a User Defined Source

ERROR 3403: FieldSelect is not supported

ERROR 3404: FieldStore is not supported

ERROR 3417: Final phase output size mismatch

ERROR 3420: First argument of date_part must be a constant string

ERROR 3434: For INSERT SELECT statement, replicated/broadcasted source data not supported

ERROR 3436: For SELECT DISTINCT, ORDER BY expressions must appear in the SELECT clause

ERROR 3451: Function *string* can't be used as a case expression

ERROR 3452: Function *string* can't be used in a boolean

ERROR 3453: Function *string* can't be used in a WHEN clause

ERROR 3454: Function *string* can't be used in as a segment expression

ERROR 3455: Function *string* can't be used with an operator

ERROR 3488: Group By, Order By, Aggregates, Having & limits not allowed in update/delete

ERROR 3510: IGNORE NULLS argument must be a Boolean constant

ERROR 3553: INHERITS not supported

ERROR 3566: Input of anonymous composite types is not implemented

ERROR 3600: Interpolated predicates can accept arguments of the same type only

ERROR 3601: Interpolated predicates can be part of AND expressions only

ERROR 3613: Interval units "*string*" not supported

Vertica Documentation

Vertica Error Messages

ERROR 3821: Joins with an interpolated predicate can have a conjunctive expression containing equality predicates. The equality predicates cannot have expressions or column references with different modifiers

ERROR 3822: Joins with an interpolated predicate cannot have expressions or column references with different modifiers in any of the expressions

ERROR 3857: Library built with unsupported version of Vertica SDK [Version: *string*, Revision: *string*]

ERROR 3876: Locale must be a constant

ERROR 3900: MATCH PARTIAL is not supported

ERROR 3972: Multi-column subquery expressions can only be used with the =, <=> and <> operators

ERROR 3973: Multi-column subquery type ALL can only be used with the = and <=> operators

ERROR 3974: Multi-column subquery type ANY can only be used with the =, <=> and <> operators

ERROR 4106: No single-source bulk loads have been executed in this session

ERROR 4147: Node issuing the query cannot be marked as down

ERROR 4160: Non-equality correlated subquery expression is not supported

ERROR 4170: Not a Star or Snow-Flake Query block

ERROR 4171: Not a Star or Snow-Flake Query block; dimension table not a star or snowflake

ERROR 4172: Not a Star or Snow-Flake Query block; no fact table found

ERROR 4173: Not a Star or Snow-Flake Query block; there are multiple fact tables

ERROR 4197: NULL value found in a column used by a subquery

ERROR 4228: ON COMMIT DROP not supported in CREATE TABLE

ERROR 4238: Only a temporary table projection can be pinned

ERROR 4248: Only inner joins are allowed in the projection defining query

ERROR 4256: Only relations and subqueries are allowed in the FROM clause

ERROR 4258: Only super user can call export_catalog with an output file name

ERROR 4259: Only super user can get the rebalance data script

ERROR 4263: Only superuser can drop system schema

ERROR 4264: Only superuser can rebalance data

ERROR 4265: Only superuser can rebalance data for replicated projections

ERROR 4266: Only superuser can rebalance data for segmented projections

ERROR 4280: Operator *string (value)* is not supported

ERROR 4281: Operator *string* is not supported for row expressions

ERROR 4298: ORDER BY on a UNION/INTERSECT/EXCEPT result must be on one of the result columns

ERROR 4299: ORDER mode not supported

ERROR 4306: OUTER join with broadcasted outer data not supported

ERROR 4307: OUTER or SEMI join - done through CROSS join and FILTER - with replicated outer and segmented inner not supported

ERROR 4308: OUTER relation in OUTER join is not the fact table nor a snowflake dimension table

ERROR 4309: Outer replicated/segmented input to a join cannot be resegmented

ERROR 4310: LEFTOUTER/SEMI/ANTI join with replicated/broadcasted outer data not supported

ERROR 4328: PARTITION AUTO can only be used with single-phase user defined transform functions

ERROR 4329: PARTITION AUTO cannot be used with pattern matching

ERROR 4331: PARTITION BY expression cannot return a tuple

ERROR 4332: PARTITION BY expression has an unknown type

Vertica Documentation

Vertica Error Messages

ERROR 4333: PARTITION BY expression may not contain aggregate functions

ERROR 4335: Partitioning expression not supported for temporary tables

ERROR 4336: Partitioning not supported for temporary tables

ERROR 4352: Pattern "E" is not supported

ERROR 4375: PINNED clause conflicts with KSAFE setting

ERROR 4376: PINNED clause is not supported in CREATE TABLE statement

ERROR 4412: Prepared statements are currently unsupported

ERROR 4465: Projection *string* of local temporary table cannot be created under user schema *string*

ERROR 4471: Projection choices are too restrictive - cannot create correct join between tables

ERROR 4486: Projections are always created and persisted in the default Vertica locale. The current locale is *string*

ERROR 4584: RENAME COLUMN over temporary tables is not supported

ERROR 4586: replicate_catalog has been shut off

ERROR 4628: Row Expressions are not supported in this context

ERROR 4631: ROW syntax is not supported

ERROR 4644: Scalar array expression cannot contain column references or subqueries

ERROR 4645: Scalar array op *string (value)* is not supported

ERROR 4664: Segmentation clause can not have offset in CREATE TABLE statement

ERROR 4665: Segmentation clause with offset conflicts with KSAFE setting

ERROR 4666: Segmentation expression must have integer type

ERROR 4671: SELECT FOR UPDATE cannot be applied to a function

ERROR 4672: SELECT FOR UPDATE cannot be applied to a join

ERROR 4673: SELECT FOR UPDATE cannot be applied to NEW or OLD

ERROR 4674: SELECT FOR UPDATE is not allowed with EXTERNAL TABLES

ERROR 4675: SELECT FOR UPDATE is not allowed with libraries

ERROR 4676: SELECT FOR UPDATE is not allowed with sequences

ERROR 4677: SELECT FOR UPDATE is not allowed with UNION/INTERSECT/EXCEPT

ERROR 4678: SELECT FOR UPDATE is not allowed with views

ERROR 4680: Self joins in UPDATE statements are not allowed

ERROR 4703: Sequence cannot be moved between system schema and user schema

ERROR 4711: Sequence or IDENTITY/AUTO_INCREMENT column in merge query is not supported

ERROR 4714: Sequences are not allowed in default expressions of local temp tables

ERROR 4715: Sequences cannot be called in views

ERROR 4716: Sequences cannot be created under system schemas

ERROR 4728: Set Operator *string* ALL not supported

ERROR 4730: Set Operator queries without a FROM clause are not supported

ERROR 4733: SET SCHEMA over temporary tables is not supported

ERROR 4735: Set-valued function called in context that cannot accept a set

ERROR 4747: SetToDefault is not supported

ERROR 4786: Statement *string* is not supported

ERROR 4808: Subqueries are not supported as the left hand argument to another subquery

ERROR 4809: Subqueries are not supported in the ORDER BY of a timeseries OVER clause

Vertica Documentation

Vertica Error Messages

ERROR 4810: Subqueries are not supported in the ORDER BY of an analytic function OVER clause

ERROR 4812: Subqueries are not supported in the PARTITION BY of an analytic function OVER clause

ERROR 4816: Subqueries in the ON clause are not supported

ERROR 4817: Subqueries in the SELECT or ORDER BY are not supported if the query has aggregates and the subquery is not part of the GROUP BY

ERROR 4818: Subqueries in the SELECT or ORDER BY are not supported if the subquery is not part of the GROUP BY

ERROR 4820: Subqueries in UPDATE/DELETE/MERGE is not supported

ERROR 4821: Subqueries not allowed in target of insert

ERROR 4822: Subqueries referring to no outer columns in HAVING clause when query has aggregates and no GROUP BY are not supported

ERROR 4824: Subquery aggregate expression that refers a correlated column is not supported

ERROR 4839: Subquery type ARRAY is not supported

ERROR 4842: Subquery without a from clause is not supported

ERROR 4850: Support for UPDATE/DELETE/MERGE is not enabled

ERROR 4854: SyncMarkers are not supported

ERROR 4865: System table *string* cannot be created under user schema *string*

ERROR 4869: System view "*string*" cannot be dropped

ERROR 4870: System view *string* cannot be created under user schema *string*

ERROR 4884: Table *string* cannot be created under system schema *string*

ERROR 4897: Table cannot be moved between system schema and user schema

ERROR 4910: Table revalidation error

ERROR 4918: Temporary Sequences are not supported

ERROR 4933: The argument types in a subquery expression in the where/having clause do not match

ERROR 4938: The constant value following the LIMIT clause cannot be negative

ERROR 4939: The constant value following the OFFSET clause cannot be negative

ERROR 4948: The fourth input argument of TIME_SLICE must be START or END

ERROR 4960: The ORDER BY ... USING clause is not supported

ERROR 4966: The second parameter of export_catalog is invalid: *string*

ERROR 4968: The slice length parameter of TIME_SLICE must be a positive integer

ERROR 5005: Time Series Aggregate Function with interpolation scheme LINEAR may only have an INTEGER or FLOAT type as its first argument

ERROR 5016: Time units "*string*" not supported

ERROR 5023: Timeseries output functions are not supported in the ORDER BY of a timeseries OVER clause

ERROR 5028: Timestamp units "*string*" not supported

ERROR 5110: Type *string* (*value*) is not supported

ERROR 5159: Uncorrelated EXISTS subqueries are not supported when the query has both HAVING clause subqueries involving aggregates and when the query has either OUTER JOINS or NOT IN subqueries

ERROR 5160: Uncorrelated EXISTS subqueries in HAVING clause when query has aggregates and no GROUP BY are not supported

ERROR 5195: UNIQUE predicate is not supported

ERROR 5262: Unsafe use of string constant with Unicode escapes

ERROR 5264: Unsupported access to session-scoped (LOCAL) object

ERROR 5270: Unsupported COPY command clause

Vertica Documentation

Vertica Error Messages

Error messages associated with this SQLState

ERROR 3544: Index corruption. *string: string*

Note: For information about troubleshooting Vertica error messages, see the [Vertica Knowledge Base](#) and the [Vertica Forum](#).

Error Messages Associated with SQLSTATE VX004

This topic lists the errors associated with the SQLSTATE VX004.

SQLSTATE VX004 Description

ERRCODE_PLAN_TO_SQL_INTERNAL_EROR

Error messages associated with this SQLState

ERROR 6890: Optimizer-generated annotated query has unexpected error. Please report to Vertica

Note: For information about troubleshooting Vertica error messages, see the [Vertica Knowledge Base](#) and the [Vertica Forum](#).

Glossary

The Vertica Glossary defines terms that are common and specific to Vertica.

Access Rank

Determines the speed at which a column can be accessed. Columns are stored on disk from the highest ranking to the lowest ranking in which the highest ranking columns are placed on the fastest disks and the lowest ranking columns are placed on the slowest disks.

ACID

ACID (Atomicity, Consistency, Isolation, Durability) is a set of properties that guarantee that database transactions are processed reliably, as follows:

- Atomicity — All of the tasks of a transaction are performed or none of them are. This means that if the entire transaction succeeds, it is committed. If any part of the transaction fails, the entire transaction fails and is rolled back.
- Consistency — Data integrity constraints are maintained. This ensures that the database remains in a consistent state before the start of the transaction and after the transaction is over (whether successful or not). Vertica provides limited constraint checking.
- Isolation — Concurrent transactions do not interact with one another.
- Durability — Short of catastrophic failure, the effects of committed transactions persist.

Administration Host

The host on which the Vertica rpm package was manually installed. Always run the Administration Tools on this host if possible.

Administration Tools

One of the ways you can administer an Vertica database is provided in the form of a graphical user interface, called Administration Tools, which lets you perform various tasks quickly and easily. You can also use Administration Tools to connect to a database using vsql.

Always run the Administration Tools on the Administration Host if possible.

```
$ /opt/vertica/bin/adminTools
```

Note: Throughout the Micro Focus documentation, you might see Administration Tools referred to as Admin Tools or admintools or adminTools. They all refer to the same utility.

Agent

A daemon process that runs on each Vertica cluster node. The agent is used by certain clients, such as Management Console, to administer Vertica.

Agents monitor Vertica database clusters and communicate with their clients to provide the following functionality:

- Provide local access, command, and control over database instances on a given node, using functionality similar to Administration Tools
- Report log-level data from the Administration Tools and Vertica log files
- Cache details from long-running jobs—such as create/start/stop database operations—that you can view through your browser
- Track changes to data-collection and monitoring utilities and communicate updates to clients
- Specifically for MC, communicate between all cluster nodes and MC through a webhook subscription, which automates information sharing and reports on cluster-specific issues like node state, alerts, events, and so on

The agent runs on port 5444, which must be accessible to agent clients.

Aggregate Projection

See [live aggregate projection](#).

AHM

An abbreviation for Ancient History Mark, AHM is the epoch prior to which historical data can be purged from physical storage.

Anchor Table

Database table that is the source for data in a [projection](#) .

Ancient History Mark

Is the epoch prior to which historical data can be purged from physical storage. Abbreviated throughout the documentation as AHM.

Apportioned Load

An *apportioned load* is a divisible load, such that you can load a single data file on more than one node. Each load starts at a different offset, requiring a parser that supports appportioning. You must use a User-Defined Load (UDL) parser that supports appportioning. An example is provided in the SDK (`DelimFilePortionParser`).

ATM

See Automatic Tuple Mover (ATM).

Authentication

The process of verifying the identity of a user attempting to connect to a database.

Authentication Service (AS)

A service that usually on the same host as the Kerberos Key Distribution Center (KDC), the AS issues tickets for a desired service, which are in turn given to users for access to the service. The AS answers requests from clients that do not send credentials with a request. The AS is generally used to gain access to the ticket-granting service (TGS) service by issuing a ticket-granting ticket (TGT).

Authorization

The process of verifying that a user has permission to perform a certain operation, such as query a specific table.

Automatic Tuple Mover

The Automatic Tuple Mover (ATM) refers to the Tuple Mover operations that occur automatically at regular intervals set by configuration parameters. For example, two configuration parameters control the TM mergeout and moveout intervals, which are both ATM activities. Conversely, invoking the `do_tm_task` function is not an ATM activity. For information about changing the TM configuration parameters, see [Tuple Mover Parameters](#) in the Administrator's Guide for further information.

Base Name

Naming convention for projections and buddy projections. The base name is the name of the associated table, followed by characters that Vertica appends to the table name. All buddy projections have the same base name so that they can be identified as a group.

Blade Server

Consists of some number of small servers, called blades, in a common chassis that allows blades to share common components such as power supplies, cooling fans, and switching capabilities.

Bit

An abbreviation for **binary digit** and is the smallest unit of data in a computer. Bits have a single binary value, 1 or 0, and these settings can be implemented as logical values (true or false) or as a switch (on or off).

Computers generally store data and execute instructions in bit multiples called bytes. There are eight bits in a byte.

Note: In some systems, the term octet is used for an eight-bit unit instead of byte.

Bitstring

A sequence of bits.

Byte

A basic unit of measurement of information storage in computers. In most systems a byte is made up of of eight bits. Half a byte (four bits) is called a nibble.

Buddy Projection

Required for K-safety. Two projections are considered to be buddies if they contain the same columns and have the same hash segmentation, using different node ordering.

Bulk Loading

A process of loading large amounts of data, such as an initial load of historic data.

C-Store

A research project at MIT, Brandeis, Brown, and the University of Massachusetts (Boston), on which Vertica is based.

Cardinality

Refers to the number of unique values for a given column in a relational table:

- *High cardinality* — Refers to columns containing values that are highly unique, such as a customer ID or an employee e-mail address. For example, in the Vertica [VMart schema](#), the `employee_dimension` table contains an `employee_key` column. This column contains values that uniquely identify each employee. Since the values in this column are unique and could be numerous, the column's cardinality type is referred to as high cardinality.
- *Normal cardinality* — Refers to columns containing values that are less unique, such as job titles and street addresses. An example of a normal-cardinality column would be `job_title` or `employee_first_name` in the `employee_dimension` table, where many employees could share the same job title or same first name.
- *Low cardinality* — Refers to a low number of unique values, relative to the overall number of records in a table. For example, in the `employee_dimension` table, the column called `employee_gender` would contain two unique values: 'Male' or 'Female'. Since there are only two values possible in this column, cardinality is low.

Case-Folded

Uppercase is converted to lowercase or lowercase is converted to uppercase.

Catalog

A set of files that contains information (metadata) about the objects in a database (nodes, tables, constraints, projections, etc.) Vertica maintains a catalog on each node in the cluster.

Catalog Path

A storage location used to store the database catalog.

Checkpoint

Every time the Tuple Mover performs a move-out operation for a given projection, it records a Checkpoint Epoch for that projection, representing an epoch up to which the projection has no data in the WOS. The minimum checkpoint epoch across all projections on that node is called the node's **Checkpoint Epoch**. It represents a point in time up to which all the data was moved out to disk. If a K-safe=1 database experiences a single-node failure, the node's recovery process attempts to rebuild the data beyond the Checkpoint Epochs from other nodes. If all nodes fail, such as during a power outage, Vertica recovers the database back to the minimum Checkpoint Epochs across all the nodes, known as the Last Good Epoch (LGE).

Cluster

The concept of Cluster in the Vertica Analytics Platform is a collection of hosts with the Vertica software packages (RPM or DEB) that are in one admin tools domain. You can access and manage a cluster from one admintools initiator host.

Columnar Tables

Vertica database tables consisting of structured data columns. The term differentiates these tables from Flex (or Flexible) tables, which minimally contain one column of unstructured, or semi-structured data. Flex tables can also have structured data columns, but they are not required. Compare with [Flexible Tables](#).

Comprehensive Design

Using the Database Designer, a comprehensive design creates a complete initial or replacement design. If you have reasonably representative data, you can create a comprehensive design that is optimized for storage and load. If you provide queries, the design is optimized for those queries.

Compression

The process of transforming data into a compact format. Compressed data cannot be directly processed; it must first be decompressed. Vertica uses integer packing for unencoded integers and LZ0 for compressible data. Although compression is generally considered to be a form of encoding, the terms have different meanings in Vertica.

Connection

A SQL connection is an occurrence of an interactive user or an application program requesting and being granted access to a database through a network connection. In Vertica, the scope of a connection is the same as that of a session.

Control node

In a large-cluster arrangement, Vertica Analytics Platform delegates control message responsibilities to a subset of nodes, called control nodes, to improve control message performance. Control nodes communicate with each other, and non-control nodes are assigned to a control node for control message communications. See [Large Cluster](#) in the Administrator's Guide.

Correlated columns

Two columns are correlated if the value of one column is related to the value of the other column. For example, state name and country name columns are strongly correlated because the city name usually, but perhaps not always, identifies the state name. The city of Conshohocken is uniquely associated with Pennsylvania, whereas the city of Boston exists in Georgia, Indiana, Kentucky, New York, Virginia, and Massachusetts. In this case, city name is strongly correlated with state name.

Cost

A relative metric of which query plan is better, based on data distribution [statistics](#). Cost does not translate into time but is an internal estimate that the query optimizer uses to compare different plans. Costs are not relative to the overall estimated run time of queries, rather they are an estimate of the overall resources that the query plan will use. If the cost of one plan is twice as large as the cost of a second plan, that does not mean the second plan will take twice as long to run.

Critical Node

A critical node is a node whose failure would cause the database to become unsafe and force a shutdown. Nodes can become critical for the following reasons:

- A node has the only copy of a particular projection.
- Fewer than half of your nodes are active.

The [V_MONITOR.CRITICAL_NODES](#) system table lists the critical nodes, if any, in your cluster.

CSV

Short for comma-separated values, another name for the comma-delimited format of data representation in tabular format. For example: Smith,Joe,123 Main St,555-4615.

Current epoch

The epoch into which data (COPY, INSERT, UPDATE, and DELETE operations) is currently being written.

Data Collector

A utility that collects and retains database monitoring information.

Note: Data Collector works in conjunction with an advisor tool called Workload Analyzer, which intelligently monitors the performance of SQL queries and workloads and recommends tuning actions based on observations of the actual workload history.

Data Collector retains history of important system activities and records essential performance and resource utilization counters. You can use information the Data Collector retains in the following ways:

- As a reference for what actions users have taken
- To locate performance bottlenecks
- To identify potential improvements to Vertica configuration

Data Collector is on by default. If you need to change this behavior, see [Data Collector Parameters](#) in the Administrator's Guide. See also the SQL Reference Manual for information about [data collection control functions](#).

Data Path

A storage location that contains actual database data files.

Data Warehouse

A relational database that is designed for query and analysis rather than transaction processing. Data warehouses:

- Are often subjected to a heavy load of periodic and ad hoc queries.
- Contain historical information that enables analysis of correlations and trends over long periods of time.
- Integrate data from various production (transactional) databases. Extraction, transformation, and loading (ETL) software converts the data to a common format and copies it into a data warehouse at regular intervals.
- Typically consist of one or more star or snowflake schemas.

Database

A cluster of nodes that, when active, can perform distributed data storage and SQL statement execution through administrative, interactive, and programmatic user interfaces.

Database administrator

The Linux user account that owns the database catalog and data storage on disk. The database administrator (DBA) can bypass all database authorization rules.

Database Designer

A tool that analyzes a logical schema definition, sample queries, and sample data, and creates a physical schema (projections) in the form of a SQL script that you deploy automatically or manually. The script creates a minimal set of superprojections to ensure K-safety, and, optionally, non-superprojections. In most cases, the projections created by the Database Designer provide excellent query performance within physical constraints. You can also [create custom designs](#) if the Database Designer does not meet your needs.

Database superuser

The automatically-created database user who has the same name as the Linux database administrator account and who can bypass all GRANT/REVOKE authorization, or any user that has been granted the PSEUDOSUPERUSER role. Do not confuse the concept of a database superuser with Linux superuser (root) privilege. A database superuser cannot have Linux superuser privilege.

DBA

See [Database administrator](#).

DDL

Data Definition Language commands, such as CREATE, ALTER, and DROP, let you define, alter, and drop logical schema objects. For example, you can create a table or schema or user account, alter a user or table column, and grant and revoke privileges and roles. After you create a table, you use the DML command INSERT to insert data into the table.

DELTAVAL (delta encoding)

Stores only the differences between sequential data values instead of the values themselves.

Derived Column

A column whose values are calculated by an expression at load time. The expression is specified within the COPY statement, and the column exists in the target database.

Design

Specific to the Database Designer, a design is made up of parameters (K-safety, optimization objective, and design type), projections, and queries. The design contains the design queries for which you optimize the design, query information tables and the design output tables.

Deterministic

Deterministic functions return the same result every time they are called if given the same input values.

Dialog

A Linux utility that creates user interfaces to shell scripts or other scripting languages, such as perl. In Vertica 8.1., Dialog is used to implement the Administration Tools, which runs in a terminal window.

Dimension Table

Sometimes called a lookup or reference table, a dimension table is one of a set of companion tables to a large (fact/anchor) table in a star schema. It contains the PRIMARY KEY column corresponding to the join columns in fact tables. For example, a business might use a dimension table to contain item codes and descriptions.

Dimension tables can be connected to other dimension tables to form a hierarchy of dimensions in a snowflake schema.

Directed Query

A saved set of instructions to the optimizer how to generate a query plan for a given query, in the form of SQL annotated with hints. A directed query pairs two components:

- *Input query*: A query that triggers use of this directed query when it is active.
- *Annotated query*: A SQL statement with embedded optimizer [hints](#), which instruct the optimizer how to create a query plan for the specified input query.

Dirty Read

Occurs when one transaction reads uncommitted changes made by another concurrent transaction. Vertica prevents dirty reads from occurring.

DML

Data Manipulation Language statements query or manipulate data in existing logical schema objects. Common commands are SELECT, INSERT, UPDATE, DELETE, and MERGE. For example, you can use DML statements to:

- View (SELECT) data in one or more tables or views
- Change (UPDATE) column values in existing table rows
- View (EXPLAIN) the optimizer execution plan
- Add (INSERT) new rows to a table
- Remove (DELETE) rows from a table
- Insert (MERGE) a batch of new records while simultaneously updating existing

While DDL statements let you change the *structure* of the database, DML statement lets you query or change the *contents*.

Dynamic SQL

A programmatic interface to a database management system that lets SQL statements be defined and run at run time, usually based on user input.

EOF

Is a condition in a computer operating system where no more data can be read from a data source. It refers to end-of-file. The data source is usually called a file or stream.

Source: Wikipedia

Encoding

The process of converting data into a standard format. In Vertica, encoded data can be processed directly, while compressed data cannot. Vertica uses a number of different encoding strategies, depending on column data type, table cardinality, and sort order.

Epoch

A logical unit of time in which a single change is made to data in the system.

Epoch Map

A catalog object that provides mapping between time and epochs. Specifically, an epoch map contains a list of epoch numbers and their associated timestamps.

Equality Predicate

A predicate in a query that uses one of the following relational operators: $<$, $>$, $<=$, $>=$, $=$, $<>$, $<=>$.

ETL

(Extract, Transform, Load) is a process in data warehousing that involves extracting data from outside sources, transforming it to fit a specific schema, and ultimately loading it into the database.

Executor Node

Any node that participates in executing a specific SQL statement. The initiator node can, and usually does, also function as an executor node.

Expression

The components of a query (columns, constants, functions) that compare one or more values against other values. Expressions can perform calculations when they are combined using arithmetic and/or logical operators and are generally used in a conditional statement.

External Procedure

A procedure external to Vertica that you create, maintain, and store on the server.

Event Series

Tables with a time column, most typically a timestamp data type.

Fact Table

The table that represents quantitative or factual data. For example, in a business, a fact table might represent orders.

A fact table is often located at the center of a star schema or snowflake schema and might also be referred to as the anchor table. It typically has a large number of records and is surrounded by a collection of dimension tables, each with fewer records. The fact table participates in a join with every dimension table. It can contain data but generally contains many join columns (with optional FOREIGN KEY constraints), each of which corresponds to the primary key column of a dimension table.

FIFO

An acronym for First In/First Out, FIFO is an abstraction for organizing and manipulating data relative to time and prioritization. The expression describes the principle of a queue processing technique or servicing conflicting demands by ordering process by first-come, first-served (FCFS) behavior: what comes in first is handled first, what comes in next waits until the first is finished, and so on.

Source: Wikipedia

Flexible Tables

Vertica database tables that minimally contain two columns:

`__identity__` – A real column with an incrementing IDENTITY value for partitioning and sorting purposes, if no other columns serve this purpose.

`__raw__` – A real LONG VARBINARY column containing unstructured, or semi-structured data.

You can create Flex tables with additional real columns, but they are not required. Compare with [Columnar Tables](#).

Foreign Key

A column that is used to join a table to other tables to ensure referential integrity of the data. A FOREIGN KEY constraint is a rule that states that a column can contain only values from the PRIMARY KEY column on a specific table.

Flattening (subqueries and views)

Occurs when a subquery or named view is internally rewritten so the subquery is combined with the outer query block. The result sets of the original and flattened queries are exactly the same, but the flattened query usually benefits from significant performance improvements.

Full Backup

Consists of copying each catalog and all data files (ROS containers) on each node, as well as the complete `/opt/vertica/config` directory.

GENERAL Pool

A special built-in pool that represents the total amount of RAM available to the resource manager for use by queries. Other pools can borrow memory from the GENERAL pool. See also [Built-In Pools](#).

Grant

Vertica defines GRANT in two ways:

1. Grant a user privileges to access database objects using any [GRANT statement](#), except GRANT (Authentication):
2. Associate a user-defined authentication method with a user through [GRANT \(Authentication\)](#). This operation differs from GRANT <privileges> as authentication methods are “associated” with a user or role and privileges are “granted” to a user or role.

Examples

Grant Access Privileges to a User

This example shows how to grant a user, Joe, privileges to access the `online_sales` schema:

```
=> GRANT USAGE ON SCHEMA online_sales TO Joe;
```

Associate an Authentication Method with a User

This example shows how to associate the `v_ldap` authentication method to user `jsmith`:

```
=> GRANT AUTHENTICATION v_ldap TO jsmith;
```

Grid Computing

A software environment based on open standards and protocols that make it possible to share disparate, loosely-coupled resources across organizations and geographies. Resources can potentially include almost any component: computer cycles, storage spaces, databases, applications, files, sensors, or scientific instruments.

Grouped ROS

A grouped ROS is a highly-optimized, read-oriented physical storage structure organized by projection. A grouped ROS makes heavy use of compression and indexing. Unlike a ROS, a grouped ROS stores data for two or more grouped columns in one disk file.

Hash Function

A reproducible method of converting data into a number that can serve as a digital fingerprint of the data. Hash functions take up to 32 arguments, usually column names, and select a specific node for each row, based on the values of the columns for that row. Use one of the built-in hash functions to segment projections. These functions provide even distribution of data over a set of nodes in a cluster.

Hash segmentation

Specifies how to segment projection data for distribution across some or all cluster nodes. You can specify segmentation for a table and a projection. If a table definition specifies segmentation, Vertica uses it for that table's [auto-projections](#).

It is strongly recommended that you use Vertica's built-in [HASH](#) function, which distributes data evenly across the cluster, and facilitates optimal query execution.

Heuristics

Denotes a rule of thumb for solving problems without extensive application of an algorithm.

Hexadecimal

A numeral system with a base of 16. Hexadecimal uses sixteen symbols: 0–9 (representing values zero to nine) and A-F (representing values ten to fifteen). For example:

```
00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B, 0C, 0D, 0E, 0F, 10 ...
```

Each hexadecimal digit represents four binary digits (bits)—also called a nibble.

To convert the base-16 hexadecimal value 0xA0FF to its base-10 decimal equivalent, hexadecimal progresses from right to left using the following places that represent a power of 16, starting with 16^0 :

```
4096  256  16  1 A    0  F  F
```

Given that A=10 and F=15 in hex, the decimal result is calculated as follows:

```
(10 x 4096) + (0 x 256) + (15 x 16) + (15 x 1) = 41215
```

Source: Wikipedia

Histogram

Provides a compact summary of large tables to permit efficient query planning. Histograms store information about how the column's values are distributed within its range.

Historical Data

Refers to any data in memory or physical storage other than the current epoch. Historical data includes all COPY, INSERT, UPDATE, and DELETE operations, including deleted rows. This allows Vertica to run a historical query on data written up to and including the epoch representing the specified date and time.

Historical query

Vertica can run a query from a snapshot of the database taken at a specific date and time or at a specific epoch. The syntax is:

```
AT TIME 'timestamp' SELECT...  
AT EPOCH epoch_number SELECT...  
AT EPOCH LATEST SELECT...
```

The command queries all data in the database up to and including the specified epoch or the epoch representing the specified date and time, without holding a lock or blocking write operations. The specified `TIMESTAMP` and `epoch_number` values must be greater than or equal to the Ancient History Mark epoch.

Historical queries, also known as snapshot queries, are useful because they access data in past epochs only. Historical queries do not need to hold table locks or block write operations because they do not return the absolute latest data. Their content is private to the transaction and valid only for the length of the transaction.

Historical queries behave in the same manner regardless of transaction isolation level. Historical queries observe only committed data, even excluding updates made by the current transaction, unless those updates are to a temporary table..

Be aware that there is only one snapshot of the logical schema. This means that any changes you make to the schema are reflected across all epochs. If, for example, you add a new column to a table and you specify a default value for the column, all historical epochs display the new column and its default value.

Host

A computer system with a 32-bit (non-production use only) or 64-bit Intel or AMD processor, RAM, hard disk, and TCP/IP network interface (IP address and hostname). Hosts share neither disk space nor main memory with each other.

ICU

An abbreviation for International Components for Unicode, ICU is an open source library that provides Unicode support.

ISO Week-Year

According to the ISO-8601 standard, the week starts on Monday, and the first week of a year contains January 4. Thus, an early January date can sometimes be in the week 52 or 53 of the previous calendar year. For example:

```
=> SELECT YEAR_ISO('01-01-2016'::DATE), WEEK_ISO('01-01-2016'), DAYOFWEEK_ISO('01-01-2016');
YEAR_ISO | WEEK_ISO | DAYOFWEEK_ISO
-----+-----+-----
      2015 |        53 |             5
(1 row)
```

Immutable (invariant) functions

When run with a given set of arguments, immutable functions such as [AVG\(\)](#) always produce the same result, regardless of environment or session settings such as locale. Some immutable functions can take an optional stable argument; in this case they are treated as stable functions.

Incremental Backup

Backs up only those files that have been added to the database since the last backup was performed. Vertica supports incremental backups through file management utilities. Incremental backups are possible because Vertica never modifies data files. Vertica adds files to and deletes them from the database. Once you have created a full backup with vbr and any subsequent incremental backups, you can use vbr to do a full restore. There is no incremental restore facility.

Incremental Design

Using the Database Designer, an incremental design creates a design with additional projections optimized for one or more queries that you provide to the design process.

Initiator Node

In the context of a client connection, the initiator node is the node associated with the specific host to which the connection was made. The initiator node can, and usually does, also function as an executor node, and is generally where the most descriptive log messages reside.

Instance

An instance of Vertica consists of the running Vertica process and disk storage (catalog and data) on a host. Only one instance of Vertica can be running on a host at any time.

Interpolation

The process of constructing new data points within a range of known data points.

JDBC

An abbreviation for Java Database Connectivity, JDBC is a call-level application programming interface (API) that provides connectivity between Java programs and data sources (SQL databases and other non-relational data sources, such as spreadsheets or flat files). JDBC is included in the Java 2 Standard and Enterprise editions.

K-Safety

K-safety sets fault tolerance for the database cluster, where K can be set to 0, 1, or 2. The value of K specifies how many copies Vertica creates of [segmented projection](#) data. If K-safety for a database is set to 1 or 2, Vertica creates K+1 instances, or *buddies*, of each projection segment. Vertica distributes these buddies across the database cluster, such that projection data is protected in the event of node failure. If any node fails, the database can continue to process queries so long as buddies of data on the failed node remain available elsewhere on the cluster.

Last Epoch

The last epoch is the current epoch minus one. `SELECT` statements under `READ COMMITTED` isolation read from the last epoch.

Last Good Epoch

A term used in manual recovery, LGE (Last Good Epoch) refers to the most recent epoch that can be recovered.

LGE

Abbreviation for last good epoch.

Live Aggregate Projection

A live aggregate projection contains columns with values that are aggregated from columns in its anchor table. When you load data into the table, Vertica aggregates the data before loading it into the live aggregate projection. On subsequent loads—for example, through [INSERT](#) or [COPY](#)—Vertica recalculates aggregations with the new data and updates the projection.

Locale

Locale specifies the user's language, country, and any special variant preferences, such as collation. Vertica uses locale to determine the behavior of certain string functions. Locale also determines the collation for various SQL commands that require ordering and comparison, such as aggregate `GROUP BY` and `ORDER BY` clauses, joins, and the analytic `ORDER BY` clause.

The default locale for a Vertica database is `en_US@collation=binary` (English US). You can define a new default locale that is used for all sessions on the database. You can also override the locale for individual sessions. However, projections are always collated using the default `en_US@collation=binary` collation, regardless of the session collation. Any locale-specific collation is applied at query time.

If you set the locale to null, Vertica sets the locale to `en_US_POSIX`. You can set the locale back to the default locale and collation by issuing the `vsq` meta-command `\locale`. For example:

```
=> set locale to '';
INFO 2567: Canonical locale: 'en_US_POSIX'
Standard collation: 'LEN'
English (United States, Computer)
SET
=> \locale en_US@collation=binary;
INFO 2567: Canonical locale: 'en_US'
Standard collation: 'LEN_KBINARY'
English (United States)
=> \locale
en_US@collation=binary;
```

You can set locale through [ODBC](#), [JDBC](#), and [ADO.net](#).

Logical Schema

Consists of a set of tables and referential integrity constraints in an Vertica database. The objects in the logical schema are visible to SQL users. The logical schema does not include projections, which make up the physical schema.

Location Label

A label assigned to a storage location. Location labels identify the location so you can create object storage policies. The labeled location you use in a storage policy becomes the default storage location for the object.

LZO

LZO (Lempel-Ziv-Oberhumer) is a data-compression algorithm that focuses on decompression speed. The algorithm is lossless, with a thread-safe reference implementation. LZO is one of several supported input formats for bulk-loading data.

Man-In-The-Middle Attack

A network security breach in which a third party makes independent connections with a client and server and relays messages between them, intercepting data throughout the process. Vertica supports the SSL and Kerberos protocols to avoid this type of attack.

Management Console

A database management tool that provides a unified view of your Vertica database and lets you monitor multiple clusters from a single point of access. See [Management Console](#) in Vertica Concepts.

MC Super (superuser administrator)

Called Super on the MC interface, the MC super is the Linux user account that gets created when you [configure MC](#). See [Configuring MC](#) and [SUPER Role \(mc\)](#).

MC-managed Database

An Vertica database that an MC SUPER or ADMIN user creates on MC or imports into the MC interface, along with the database cluster. When MC users are granted database privileges, their privileges are defined though the MC itself and pertain only to databases managed on the MC. See [About MC Privileges and Roles](#).

Manual Recovery

The process of recovery after an unclean shutdown of the database, where the administrator must accept recovery from the Last Good Epoch, which could lead to loss of some recently loaded data. See [Failure Recovery](#).

Mergeout

Mergeout is the Tuple Mover process that consolidates ROS containers and purges deleted records.

Meta-Functions

Used to query or change the internal state of Vertica and are not part of the SQL standard. See [Vertica Meta-functions](#) in the SQL Reference Manual.

Metadata

Data that describes the data in a database, such as data type, compression, constraints, and so forth, for each column in the tables. Metadata is stored in the Vertica catalog.

Moveout

The tuple mover operation of moving data from the WOS (Write Optimized Store), which is kept in memory, to the ROS (Read Optimized Store), which is kept on disk.

Multi-Homed

A computer host that has multiple IP addresses to connected networks.

NaN

An abbreviation for Not A Number, "NaN" (disregarding case) is optionally followed by a sequence of characters enclosed in parentheses. The character string specifies the value of NaN in an implementation-dependent manner. The Vertica internal representation of NAN, for example, is `0xfff8000000000000LL` on x86 machines.

Nibble

A four-bit aggregation (half a byte or half an octet) that can represent the decimal values 0 to 15 (16 distinct values). Since there are 16 possible values, a nibble corresponds to a single hexadecimal digit and is sometimes referred to as a "hex digit" or "hexit".

The following is a 4-bit nibble:

1 0 0 1

Note: In some systems, the term octet is used for an eight-bit unit instead of byte

Source: Wikipedia

Node

A host configured to run an instance of Vertica. It is a member of the database cluster. For a database to have the ability to recover from the failure of a node requires a database K-safety value of at least 1 (3+ nodes).

Node Definition

A metadata object that binds a host to a database. A node definition contains a symbolic node name that is used to specify segmentation in projections.

Nondeterministic

Nondeterministic functions could return different results each time they are called, even when the same input values are provided. For example, `GETDATE` and `CURRENT_TIMESTAMP` are nondeterministic functions.

Non-Repeatable Read

Occurs in a READ COMMITTED isolation level when two identical queries in the same transaction produce different results. This occurs when another transaction commits changes that alter the results of the query after the first query has completed and before the second query has begun.

NUL

Represents a character whose ASCII/Unicode code is zero, sometimes qualified "ASCII NUL".

NULL

Means *no value*, and is true of a field (column) or constant but not of a character.

Octal

The base-8 number system that uses eight unique symbols (0, 1, 2, 3, 4, 5, 6, and 7), where each digit represents three binary digits, starting from the right.

For example, the binary representation for decimal 74 is 0b1001010, which groups into 001 001 010 — so the octal representation is 112.

Whereas in decimal systems, each decimal place is a base of 10

$$74 = 7 \times 10^1 + 4 \times 10^0$$

in octal numerals, each place is a power with base 8:

$$112 = 1 \times 8^2 + 1 \times 8^1 + 2 \times 8^0$$

By performing the octal calculation, you can see 112 (octal) = 64 + 8 + 2 = 74 (in decimal).

Though octal is sometimes used in computing, instead of hexadecimal, hexadecimal is generally the more straightforward format and is used throughout the Vertica documentation.

Source: Wikipedia

Octet

A series of eight bits to form a single byte.

ODBC

An abbreviation for Open DataBase Connectivity, ODBC is a standard application programming interface (API) for access to database management systems.

OID

An object identifier (OID) is an identifier used to name an object. Structurally, an OID consists of a node in a hierarchically-assigned namespace, formally defined using the International Telecommunication Union-Telecommunication's (ITU-T) Abstract Syntax Notation standard (ASN.1). Vertica database objects are always assigned an OID. The OID can be used directly in some statements, such as [HAS_TABLE_PRIVILEGE](#).

Source: Wikipedia

OLAP

An abbreviation for Online Analytical Processing, OLAP answers multi-dimensional SQL analytical queries.

OLTP

An abbreviation for Online Transaction Processing, OLTP facilitates and manages real-time, transaction-oriented applications, such as data entry and retrieval transactions, for decision-support servers. OLTP technology is used in industries, such as financial services (e-trading and e-banking), manufacturing and mail order (e-commerce and order processing)

Out-Of-Date

A projection is out-of-date if it requires a refresh to participate in query execution.

Parallel Load

Parallel load is the process of loading data on any available node in the cluster (not necessarily the local node). Use this approach in combination with wildcards (such as *.dat) to load data files in parallel in a distributed manner. See COPY ON ANY NODE in COPY [COPY Parameters](#)

Path (quality plan)

The execution strategy of the Vertica cost-based query optimizer, denoting a sub operation in the query plan.

Partition Key

A table column that specifies how the table is partitioned.

Partitioning

Specifies how data is organized within individual nodes. Partitioning attempts to introduce hot spots within the node, providing a convenient way to drop data and reclaim the disk space.

Note: Partitioning and segmentation are terms often used interchangeably for other databases, but they have completely separate goals in Vertica regarding data localization. See [Comparing Partitioning and Segmentation](#) in the Administrator's Guide for details.

Phantom Read

Occurs in a READ COMMITTED isolation level when two identical queries in the same transaction produce different collections of rows. This occurs because a table lock is not acquired on SELECT during the initial query.

Physical Schema

Consists of a set of projections used to store data on disk. The projections in the physical schema are based on the objects in the logical schema.

Physical Schema Design

A usable K=1 design based on an analysis of the sample data files and queries (if available). The physical schema design contains segmented (fact table) superprojections and replicated (dimension table) superprojections.

Predicate

Specify conditions that can be evaluated to SQL [three-valued logic](#) (3VL) Boolean truth values. Predicates are also used to limit the effects of statements and queries.

Primary Column

A column that is loaded from raw data, and not derived from an expression.

Primary Key

A single column or combination of columns (called a compound key) that uniquely identifies each row in a table. A PRIMARY KEY constraint contains unique, non-null values.

Projection

Optimized collections of table columns that provide physical storage for data. A projection can contain some or all of the columns of one or more tables.

For conceptual information about Vertica projections, see [Physical Schema](#) in Vertica Concepts. For information about using and managing projections, see [Working with Projections](#) in the Administrator's Guide.

Projection set

A group of buddy projections that are safe for a given level of K-safety. When $K=1$, there are two buddies in a set; when $K=2$, there are three buddies. The Database Designer assigns all projections in a projection set the same base name so they can be identified as a group.

A projection must be part of a projection set before it is refreshed. Once a projection set is created (by creating buddies), the set is refreshed in a single transaction.

Purge

Permanently removes deleted data from physical storage so disk space can be reused. You can purge historical data up to and including the Ancient History Mark epoch.

Query Cluster Level

Determines the number of sets used to group similar queries. The query cluster level can be any integer from one (1) to the number of queries to be included in the physical schema design.

Queries are generally grouped based on the columns they access and the way in which they are used. The following work loads typically use different types of queries and are placed in different query clusters: drill downs, large aggregations, and large joins. For example, if a reporting tool and dashboard both access the same database, the reporting tool is likely to use a drill down to access a subset of data and the dashboard is likely to use a large aggregation to look across a large range of data. In this case, there would be at least two (2) query clusters.

Query Optimizer

The component that evaluates different strategies for running a query and picks the best one.

RDBMS

An abbreviation for relational database management system.

RLE (Run Length Encoding)

The abbreviation for Run Length Encoding, RLE replaces sequences of the same data values within a column by a single value and a count number.

Recovery

Vertica can restore the database to a fully functional state after one or more nodes in the system experiences a software- or hardware-related failure. Vertica recovers nodes by querying replicas of the data stored on other nodes. For example, a hardware failure can cause a node to lose database objects or to miss changes made to the database (INSERTs, UPDATEs, and so on) while offline. When the node comes back online, queries other nodes in the cluster to recover lost objects and catch up with database changes.

Referential Integrity

Consists of a set of constraints (logical schema objects) that define primary key and foreign key columns.

- Each small table must have a PRIMARY KEY constraint.
- The large table must contain columns that can be used to join the large table to smaller tables.
- Outer join queries produce the same results as the corresponding inner join query if there is a FOREIGN KEY constraint on the outer table. Note that the inner table of the outer join query must always have a PRIMARY KEY constraint on its join columns.

Refresh

Ensures that all projections on a node are up-to-date (can participate in query execution). This process could take a long time, depending on how much data is in the table(s).

Replication

The Vertica process of storing identical copies of data across all nodes in a cluster.

Replay Attack

Occurs when the same hash (password equivalent value) can be sent by a different source and successfully authenticated. Vertica uses timestamps to prevent hashing because a timestamp is unique for each authentication request. For example, all passwords are combined with the user name and current timestamp for each authentication request.

Resegmentation

A process that Vertica performs automatically during query execution that distributes the rows of an existing projection or intermediate relation evenly to each node in the cluster. At the end of resegmentation, every row from the input relation is on exactly one node. Vertica resements data when the input does not have the segmentation required to compute the requested result efficiently and correctly.

Resource Pool

A resource pool comprises a pre-allocated subset of the system resources, with an associated queue. A resource pool is created using the `CREATE RESOURCE POOL` command as described in the SQL Reference Manual.

Resource Manager

In a single-user environment, the system can devote all resources to a single query and get the most efficient execution for that one query. However, in a environment where several concurrent queries are expected to run at once, there is tension between providing each query the maximum amount of resources (thereby getting fastest run time for that query) and serving multiple queries simultaneously with a reasonable run time. The Resource Manager (RM) provides options and controls for resolving this tension, while ensuring that every query eventually gets serviced and that true system limits are respected at all times.

Role

A role groups together a set of privileges that can be assigned to a user or another role. You can use roles to quickly grant or revoke privileges on multiple tables, schemas, functions or other database entities to one or more users with a single command.

Vertica's implementation of roles conforms to the SQL Standard T331 for basic roles.

Rollback

Transaction rollbacks restore a database to an earlier state by discarding changes made by that transaction. Statement-level rollbacks discard only the changes initiated by the reverted statements. Transaction-level rollbacks discard all changes made by the transaction.

With a ROLLBACK statement, you can explicitly roll back to a named savepoint within the transaction, or discard the entire transaction. Vertica can also initiate automatic rollbacks in two cases:

- An individual statement returns an ERROR message. In this case, Vertica rolls back the statement.
- DDL errors, systemic failures, dead locks, and resource constraints return a ROLLBACK message. In this case, Vertica rolls back the entire transaction.

Explicit and automatic rollbacks always release any locks that the transaction holds.

ROS (Read Optimized Store)

Read Optimized Store (ROS) is a highly optimized, read-oriented, disk storage structure, organized by projection. ROS makes heavy use of compression and indexing.

ROS container

A ROS (Read Optimized Store) container is a set of rows stored in a particular group of files. ROS containers are created by operations like Moveout or COPY DIRECT. You can query the STORAGE_CONTAINERS system table to see ROS containers. The ROS container layout can differ across nodes due to data variance. Segmentation can deliver more rows to one node than another. Two data loads could fit in the WOS on one node and spill on another.

RPM

A powerful package manager, which can be used to build, install, query, verify, update, and erase individual software packages. A package consists of an archive of files and metadata used to install and erase the archive files. The metadata includes helper scripts, file attributes, and descriptive information about the package. Packages come in two varieties: binary packages, used to encapsulate software to be installed, and source packages, containing the source code and recipe necessary to produce binary packages.

Safe

A projection is safe if it has enough buddy projections for the current K-safety level.

SAN

An abbreviation for Storage Area Network, SAN is a dedicated hardware/software platform consisting of networked servers that provide access to storage-related resources such as such as disk array controllers. It provides high data transfer speeds similar to those used for internal disk drives (ATA, SCSI, etc.) and is highly scalable.

Salt

Random bytes included in the password hash to prevent replay attacks. See [Implementing Client Authentication](#) in the Administrator's Guide.

Savepoint

A *savepoint* is a special marker inside a transaction that allows commands that execute after the savepoint to be rolled back. The transaction is restored to the state that preceded the savepoint.

Vertica supports two types of savepoints:

- An *implicit savepoint* is automatically established after each successful command within a transaction. This savepoint is used to roll back the next statement if it returns an error. A transaction maintains one implicit savepoint, which it rolls forward with each successful command. Implicit savepoints are available to Vertica only and cannot be referenced directly.
- *Named savepoints* are labeled markers within a transaction that you set through [SAVEPOINT](#) statements. A named savepoint can later be referenced in the same transaction through [RELEASE SAVEPOINT](#), which destroys it, and [ROLLBACK TO SAVEPOINT](#), which rolls back all operations that followed the savepoint. Named savepoints can be especially useful in nested transactions: a nested transaction that begins with a savepoint can be rolled back entirely, if necessary.

Schema

Has several related meanings in Vertica:

- In SQL statements, a schema refers to named namespace for a logical schema.
- Logical schema refers to a set of tables and constraints.
- Physical schema refers to a set of projections.

Secure Shell

A set of standards and an associated network protocol that establishes a secure TCP/IP data transmission channel between a local and a remote computer. Secure Shell (SSH) utilizes strong encryption and authentication to ensure confidentiality, integrity, and authenticity of the transferred data.

SSH is typically used to log in to a remote machine and run commands. Use SSH only between two devices that are both under your own administration, when both devices are trustworthy.

Seed

The starting value used by a random number generation routine to create random numbers.

Segmentation

Defines how physical data storage (projections) is stored in a database cluster using the [CREATE PROJECTION](#) statement. The goal is to distribute data evenly across multiple nodes in the database so that all nodes can participate in query execution.

Note: Partitioning and segmentation are terms often used interchangeably for other databases, but they have completely separate goals in Vertica regarding data localization. See [Comparing Partitioning and Segmentation](#) in the Administrator's Guide for details.

Select List

The list of expressions that appears after the `SELECT` keyword and before the `FROM` clause is called the select list. The select list is where you specify the columns in the set of records you want Vertica to return from one or more tables or views.

Session

An occurrence of a user interacting with a database through the use of SQL statements. You can start a session using vsql or a JDBC application. In Vertica, the scope of a session is the same as that of a connection. Connecting to the database starts a session, and exiting ends it.

Session-scoped data is preserved beyond the lifetime of a single transaction. Terminating a session truncates a table and deletes all rows.

Site

A deprecated term in Vertica that is used to mean node or host in some contexts, such as the CREATE PROJECTION statement.

Snapshot Isolation

Vertica can run any SQL query in snapshot isolation mode in order to obtain the fastest possible execution. To be precise, snapshot isolation mode is actually a form of a historical query. The syntax is:

```
AT EPOCH LATEST SELECT...
```

The command queries all data in the database up to but not including the current epoch without holding a lock or blocking write operations, which could cause the query to miss rows loaded by other users up to (but no more than) a specific number of minutes before execution.

Snowflake Schema

The same as a star schema except that a dimension table can be normalized (hierarchically decomposed) into additional dimension tables. Every dimension table participates in a 1::n join with the fact table or another dimension table.

Spread

An open source toolkit used in Vertica to provide a high performance messaging service that is resilient to network faults. Spread daemons start automatically when a database starts up for the first time, and the spread process runs on [control nodes](#) in the cluster.

Sort-Merge Join

If both inputs are pre-sorted, merge joins do not have to do any pre-processing. Vertica uses the term sort-merge join to refer to the case when one of the inputs must be sorted prior to the merge join. Vertica sorts the inner input side but only if the outer input side is already sorted on the join keys.

Source (table)

In [MERGE](#) operations, source is the table reference that contains the new and/or changed data you want to use to update the target table.

SQL

An abbreviation for Structured Query Language, SQL is a widely-used, industry standard data definition and data manipulation language for relational databases.

SSH

An abbreviation for Secure Shell, SSH is a set of standards and an associated network protocol that establishes a secure TCP/IP data transmission channel between a local and a remote computer. Secure Shell (SSH) uses strong encryption and authentication to ensure confidentiality, integrity, and authenticity of the transferred data.

SSH is typically used to log in to a remote machine and run commands. Use SSH only between two devices that are both under your own administration, when both devices are trustworthy.

Stable functions

When run with a given set of arguments, stable functions produce the same result within a single query or scan operation. However, a stable function can produce different results when issued under different environments or at different times, such as change of locale and time zone—for example, `SYSDATE()` and `'today'`.

Star Schema

Sometimes called a star join schema, a star schema is the simplest data warehouse schema. In a star schema design there is a central fact table with a large number of records, optionally surrounded by a collection of dimension tables, each with a lesser number of records. Every dimension table participates in a 1::n join with the fact table.

Standalone Resource Pool

A pool that is configured such that it cannot borrow memory from the GENERAL pool. A standalone pool has MEMORYSIZE = MAXMEMORYSIZE.

Storage Location

A directory path used by Vertica to store catalog, actual data files, and temporary data files.

You can also create storage locations for users, and then grant one or more users access to the storage. You can also create a storage location with a location label, for use in storage policies.

Storage Policy

A database object you create to associate a labeled location as the default storage location for the object. Database object can be a database, schema, table, or min- and max- ranges of a partition.

Strict

Indicates that a function always returns null when any of its input arguments is null.

Superprojection

A projection that includes all columns in an anchor table. Vertica uses superprojections to ensure support for all queries and other DML operations.

Under certain conditions, Vertica [automatically creates a table's superprojection](#) immediately on table creation. Vertica also creates a superprojection when you first load data into that table, if none already exists. `CREATE PROJECTION` can create a superprojection if it specifies to include all table columns. A table can have multiple superprojections.

Superuser

The automatically-created database user who has the same name as the Linux database administrator account and who can bypass all GRANT/REVOKE authorization, or any user that has been granted the PSEUDOSUPERUSER role. Do not confuse the concept of a database superuser with Linux superuser (root) privilege. A database superuser cannot have Linux superuser privilege.

TM

An abbreviation for the [Tuple Mover](#).

Table

In the relational model, a table (relation) is a set of data elements (values) organized into horizontal rows (tuples) and vertical columns. A table has a specified number of columns but can have any number of rows.

In Vertica, a table is a metadata-only entity referred to in queries. The physical representation of data is a projection.

Target (table)

In [MERGE](#) operations, the target table is the table that contains the existing records you want to update, using records from the source table.

Temp Location

A storage location used as temp space by Vertica.

Temp Space

Disk space temporarily occupied by temporary files created by certain query execution operations, such as hash joins and sorts, in the case when they have to spill to disk. Such operations might also be encountered during queries, recovery, refreshing projections, and so on. If a temp location is provided to the database, Vertica uses it as temp space.

Top-K Projection

A projection that configures the projection data for a Top-K query. A Top-K query is one that retrieves the top k rows from a group of tuples.

A Top-K projection is a type of live aggregate projection.

Transaction

One or more operations that are executed as a unit of work. At the user level, transactions occur in the current session by a user or script running one or more SQL statements. When you commit a transaction, any changes you make to data in tables using `INSERT`, `DELETE`, `UPDATE`, `MERGE`, and `COPY` during the transaction become permanent. If you roll back the transaction, all changes made to table data are undone.

Vertica supports Atomicity, Consistency, Isolation, and Durability (ACID) for SQL transactions.

Tuple

A collection of data values corresponding conceptually to a row of a table, projection, or result set. A tuple in Vertica does not have the same physical representation as in a traditional RDBMS; it is a virtual entity that could have entirely different storage representations.

Tuple Mover

The Tuple Mover manages WOS and ROS data storage. It performs two operations:

- [Moveout](#) moves data from WOS to ROS. During moveout operations, the Tuple Mover also enforces storage policies for the storage location.
- [Mergeout](#) combines small ROS containers into larger ones and purges deleted data.

The Tuple Mover automatically performs these tasks in the background, at intervals that are set by its [configuration parameters](#).

UDx

User-Defined Extensions (UDxs) are functions contained in external shared libraries that are developed in C++, Python, Java, or R using the Vertica SDK. The external libraries are defined in the Vertica catalog using the [CREATE LIBRARY](#) statement. They are best suited for analytic operations that are difficult to perform in SQL, or need to be performed frequently enough that their speed is a major concern.

UDP

An abbreviation for User Datagram Protocol, UDP is an Open Systems Interconnection (OSI) transport layer protocol for client/server network applications based on Internet Protocol (IP). UDP is the primary alternative to the Transmission Control Protocol (TCP) and is used to send messages (datagrams), to other hosts on an IP network. UDP messages can be sent to one host, a group of hosts (multicast), or all hosts (broadcast) on an IP subnet.

User-Defined SQL Function

User-Defined SQL Functions let you define and store commonly-used SQL expressions as a function. User-Defined SQL Functions are useful for executing complex queries and combining Vertica built-in functions. You simply call the function name you assigned in your query.

A User-Defined SQL Function can be used anywhere in a query where an ordinary SQL expression can be used, except in the table partition clause or the projection segmentation clause.

UTC

An abbreviation for Coordinated Universal Time (in English), UTC is the high-precision atomic time standard that replaced Greenwich Mean Time on 1 January 1972 as the basis for the main reference time scale or civil time in various regions. UTC is also referred to by the military and civil aviation as Zulu time (Z).

UTF-8

Vertica supports Unicode Transformation Format-8, or UTF8, where 8 equals 8-bit. UTF-8 is a variable-length character encoding for Unicode created by Ken Thompson and Rob Pike. UTF-8 can represent any universal character in the Unicode standard. Initial encoding of byte codes and character assignments for UTF-8 coincides with ASCII. Thus, UTF8 requires little or no change for software that handles ASCII but preserves other values.

Vertica database servers expect to receive all data in UTF-8, and Vertica outputs all data in UTF-8. The ODBC API operates on data in UCS-2 on Windows systems, and normally UTF-8 on Linux systems. JDBC and ADO.NET APIs operate on data in UTF-16. Client drivers automatically convert data to and from UTF-8 when sending to and receiving data from Vertica using API calls. The drivers do not transform data loaded by executing a [COPY](#) or [COPY LOCAL](#) statement.

Unary Operator

An operation with a single input.

Up to Date

See Up-to-date.

Up-To-Date

A projection is up-to-date (or up to date) if it is eligible to participate in query execution. Projections on empty tables are up-to-date upon creation. If the table has data loaded already, newly created projections are marked not up-to-date until refreshed. If a projection is refreshed while a node is down, that projection can be marked up-to-date even though it is missing data on one of the nodes. This is because the node will build the data during the recovery process before participating in queries.

User Agent

A client application program used to access resources on networks such as the World Wide Web. User agents include web browsers, search engine crawlers, PDAs, cell phones, and so forth.

View

A named logical relation specified by an associated query that can be accessed similarly to a table in the FROM clause of a SQL statement. The results of the query are not stored but obtained on the fly when the SQL referencing the view is executed.

Volatile functions

Regardless of their arguments or environment, volatile functions can return a different result with each invocation—for example, [RANDOM\(\)](#).

Volatility

Indicates whether a function returns the same output given the same input. There are 3 types:

- Immutable (same output given same input)
- Stable (same output within the same row)
- Volatile (different output for each invocation, such as `RANDOM()`)

vsq!

vsq! is a character-based, interactive, front-end utility that lets you type SQL statements and see the results. It also provides a number of meta-commands and various shell-like features that facilitate writing scripts and automating a variety of tasks.

WLA

An abbreviation for Workload Analyzer.

Webhook

A subscription that the Management Console application/web server sends to each agent in the Vertica cluster. MC creates a webhook when it connects to the agent, and the agent stores this information in local memory and on disk.

When MC executes a long-running job on an agent, such as a create-database operation, the agent uses the webhook subscription to send messages back to MC. If an agent on a cluster node stops while the MC is monitoring the database cluster during a long-running job, MC discovers that the agent is down and switches to another agent in that cluster.

Window (analytic)

An analytic function's `OVER` clause specifies how to partition, sort, and frame function input with respect to the current row. The input data is the result set that the query returns after it evaluates `FROM`, `WHERE`, `GROUP BY`, and `HAVING` clauses.

Workload Analyzer

An advisor tool that analyzes system information held in [SQL system tables](#) (monitoring APIs) and returns a set of tuning recommendations. See [Analyzing Workloads](#) in the Administrator's Guide for details.

WOS (Write Optimized Store)

Write Optimized Store (WOS) is a memory-resident data structure for short-term data storage. It is typically accessed by data manipulation language (DML) statements that load or remove data: [INSERT](#), [COPY](#), [UPDATE](#), and [DELETE](#). To support very fast data load speeds, WOS stores records without data compression or indexing. A projection in WOS is sorted only when it is queried. It remains sorted as long as no further data is inserted into it. WOS organizes data by epoch and holds both committed and uncommitted transaction data.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or

other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

You must give any other recipients of the Work or Derivative Works a copy of this License; and
You must cause any modified files to carry prominent notices stating that You changed the files; and

You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any

character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is

intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

You must give any other recipients of the Work or Derivative Works a copy of this License; and

You must cause any modified files to carry prominent notices stating that You changed the files; and

You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of

the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License.

However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

Description

Data serialization system: Apache Avro is a data serialization system. Avro provides:

- Rich data structures.
- A compact, fast, binary data format.
- A container file, to store persistent data.
- Remote procedure call (RPC).
- Simple integration with dynamic languages.

Code generation is not required to read or write data files nor to use or implement RPC protocols. Code generation as an optional optimization, only worth implementing for statically typed languages.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

You must give any other recipients of the Work or Derivative Works a copy of this License; and
You must cause any modified files to carry prominent notices stating that You changed the files; and

You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions.

Notwithstanding the above, nothing herein shall supersede or modify the terms of any

separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution (s) alone or by combination of their Contribution(s) with the Work to which such Contribution (s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

You must give any other recipients of the Work or Derivative Works a copy of this License; and
You must cause any modified files to carry prominent notices stating that You changed the files; and

You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions.

Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any

character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is

intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

You must give any other recipients of the Work or Derivative Works a copy of this License; and

You must cause any modified files to carry prominent notices stating that You changed the files; and

You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of

the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License.

However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

You must give any other recipients of the Work or Derivative Works a copy of this License; and
You must cause any modified files to carry prominent notices stating that You changed the files; and

You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any

character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

You must give any other recipients of the Work or Derivative Works a copy of this License; and
You must cause any modified files to carry prominent notices stating that You changed the files; and

You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any

character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

You must give any other recipients of the Work or Derivative Works a copy of this License; and

You must cause any modified files to carry prominent notices stating that You changed the files; and

You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within

such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions.

Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. **Accepting Warranty or Additional Liability.** While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

You must give any other recipients of the Work or Derivative Works a copy of this License; and
You must cause any modified files to carry prominent notices stating that You changed the files; and

You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any

character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

Apache Hadoop

Copyright © 2012 The Apache Software Foundation.

<http://www.apache.org/licenses/>

Version 2.0, January 2004

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the

purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution (s) alone or by combination of their Contribution(s) with the Work to which such Contribution (s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

You must give any other recipients of the Work or Derivative Works a copy of this License; and

You must cause any modified files to carry prominent notices stating that You changed the files; and

You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such

third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify,

defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

Version 2.0, January 2004

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or

other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

You must give any other recipients of the Work or Derivative Works a copy of this License; and
You must cause any modified files to carry prominent notices stating that You changed the files; and

You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any

character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

You must give any other recipients of the Work or Derivative Works a copy of this License; and
You must cause any modified files to carry prominent notices stating that You changed the files; and

You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any

character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

You must give any other recipients of the Work or Derivative Works a copy of this License; and

You must cause any modified files to carry prominent notices stating that You changed the files; and

You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within

such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions.

Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. **Accepting Warranty or Additional Liability.** While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

Description

The smallest, fastest columnar storage for Hadoop workloads.

Apache License Version 2.0

<http://www.apache.org/licenses/>

Version 2.0, January 2004

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution (s) alone or by combination of their Contribution(s) with the Work to which such Contribution (s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

You must give any other recipients of the Work or Derivative Works a copy of this License; and

You must cause any modified files to carry prominent notices stating that You changed the files; and

You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. **Limitation of Liability.** In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. **Accepting Warranty or Additional Liability.** While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

Apache ORC Subcomponents

The Apache ORC project contains subcomponents with separate copyright notices and license terms. Your use of the source code for these subcomponents is subject to the terms and conditions of the following licenses.

Parts of the site formatting are licensed under the MIT License (MIT):

Permission is hereby granted, free of charge, to any person obtaining a copy of this software and associated documentation files (the "Software"), to deal in the Software without restriction, including without limitation the rights to use, copy, modify, merge, publish, distribute, sublicense, and/or sell copies of the Software, and to permit persons to whom the Software is furnished to do so, subject to the following conditions:

The above copyright notice and this permission notice shall be included in all copies or substantial portions of the Software.

THE SOFTWARE IS PROVIDED "AS IS", WITHOUT WARRANTY OF ANY KIND, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO THE WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE AND NONINFRINGEMENT. IN NO EVENT SHALL THE AUTHORS OR COPYRIGHT HOLDERS BE LIABLE FOR ANY CLAIM, DAMAGES OR OTHER LIABILITY, WHETHER IN AN ACTION OF CONTRACT, TORT OR OTHERWISE, ARISING FROM, OUT OF OR IN CONNECTION WITH THE SOFTWARE OR THE USE OR OTHER DEALINGS IN THE SOFTWARE.

Apache Parquet

Apache License 2.0, Parquet Component 2.3

Apache Parquet is a general-purpose columnar storage format, built for Hadoop. You can use Parquet with any data processing framework, data model, or programming language. The Apache Parquet library lets Vertica users read Parquet files efficiently. This work includes building an optimized reader in C++ for parquet files.

Description

<http://www.apache.org/licenses/>

Version 2.0, January 2004

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

You must give any other recipients of the Work or Derivative Works a copy of this License; and
You must cause any modified files to carry prominent notices stating that You changed the files; and

You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any

character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is

intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

You must give any other recipients of the Work or Derivative Works a copy of this License; and

You must cause any modified files to carry prominent notices stating that You changed the files; and

You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of

the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License.

However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

Description

<http://www.apache.org/licenses/>

Version 2.0, January 2004

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or

other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

You must give any other recipients of the Work or Derivative Works a copy of this License; and
You must cause any modified files to carry prominent notices stating that You changed the files; and

You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any

character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

BLAS

Version 3.6.0, updated November 2015

Basic Linear Algebra Subprograms (BLAS) are routines that provide standard building blocks for performing basic vector and matrix operations. The Level 1 BLAS perform scalar, vector and vector-vector operations, the Level 2 BLAS perform matrix-vector operations, and the Level 3 BLAS perform matrix-matrix operations. Because the BLAS are efficient, portable, and widely available, they are commonly used in the development of high quality linear algebra software, LAPACK for example.

License and Acknowledgments

This material is based upon work supported by the National Science Foundation under Grant No. ASC-9313958 and DOE Grant No. DE-FG03-94ER25219. Any opinions, findings and conclusions or recommendations expressed in this material are those of the author(s) and do not necessarily reflect the views of the National Science Foundation (NSF) or the Department of Energy (DOE).

The reference BLAS is a freely-available software package. It is available from netlib via anonymous ftp and the World Wide Web. Thus, it can be included in commercial software packages (and has been). We only ask that proper credit be given to the authors.

Like all software, it is copyrighted. It is not trademarked, but we do ask the following:

- If you modify the source for these routines we ask that you change the name of the routine and comment the changes made to the original.
- We will gladly answer any questions regarding the software. If a modification is done, however, it is the responsibility of the person who modified the routine to provide support.

Version 2.0, January 2004

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is

intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

You must give any other recipients of the Work or Derivative Works a copy of this License; and

You must cause any modified files to carry prominent notices stating that You changed the files; and

You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of

the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License.

However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

You must give any other recipients of the Work or Derivative Works a copy of this License; and

You must cause any modified files to carry prominent notices stating that You changed the files; and

You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of

the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License.

However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is

intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

You must give any other recipients of the Work or Derivative Works a copy of this License; and

You must cause any modified files to carry prominent notices stating that You changed the files; and

You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of

the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License.

However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

You must give any other recipients of the Work or Derivative Works a copy of this License; and
You must cause any modified files to carry prominent notices stating that You changed the files; and

You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any

character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution (s) alone or by combination of their Contribution(s) with the Work to which such Contribution (s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

You must give any other recipients of the Work or Derivative Works a copy of this License; and

You must cause any modified files to carry prominent notices stating that You changed the files; and

You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions.

Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT,

MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

You must give any other recipients of the Work or Derivative Works a copy of this License; and
You must cause any modified files to carry prominent notices stating that You changed the files; and

You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions.

Notwithstanding the above, nothing herein shall supersede or modify the terms of any

separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

Version 2.0, January 2004

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of

this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

You must give any other recipients of the Work or Derivative Works a copy of this License; and
You must cause any modified files to carry prominent notices stating that You changed the files; and

You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or

malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. **Accepting Warranty or Additional Liability.** While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

Version 2.0, January 2004

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

You must give any other recipients of the Work or Derivative Works a copy of this License; and

You must cause any modified files to carry prominent notices stating that You changed the files; and

You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. **Limitation of Liability.** In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. **Accepting Warranty or Additional Liability.** While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

FreeMarker Subcomponents with Different Copyright Owners

FreeMarker, both in its source code and binary form (freemarker.jar) includes a number of files that are licensed by the Apache Software Foundation under the Apache License, Version 2.0. This is the same license as the license of FreeMaker, but the copyright owner is the Apache Software Foundation. These files are:

- freemarker/ext/jsp/web-app_2_2.dtd
- freemarker/ext/jsp/web-app_2_3.dtd
- freemarker/ext/jsp/web-jsptaglibrary_1_1.dtd
- freemarker/ext/jsp/web-jsptaglibrary_1_2.dtd

Historical Notes

FreeMarker 1.x was released under the LGPL license. Later, by community consensus, we have switched over to a BSD-style license. As of FreeMarker 2.2pre1, the original author, Benjamin Geer, has relinquished the copyright in behalf of Visigoth Software Society. With FreeMarker 2.3.21 the license has changed to Apache License, Version 2.0, and the owner has changed from Visigoth Software Society to three of the FreeMarker 2.x developers, Attila Szegedi, Daniel Dekany, and Jonathan Revusky.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is

intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

You must give any other recipients of the Work or Derivative Works a copy of this License; and

You must cause any modified files to carry prominent notices stating that You changed the files; and

You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of

the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License.

However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

Guava Libraries

Version 18.0

<http://www.apache.org/licenses/>

Version 2.0, January 2004

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the

purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution (s) alone or by combination of their Contribution(s) with the Work to which such Contribution (s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

You must give any other recipients of the Work or Derivative Works a copy of this License; and

You must cause any modified files to carry prominent notices stating that You changed the files; and

You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such

third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions.

Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify,

defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

Version 2.0, January 2004

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is

intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

You must give any other recipients of the Work or Derivative Works a copy of this License; and

You must cause any modified files to carry prominent notices stating that You changed the files; and

You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of

the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License.

However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is

intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

You must give any other recipients of the Work or Derivative Works a copy of this License; and

You must cause any modified files to carry prominent notices stating that You changed the files; and

You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of

the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License.

However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is

intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

You must give any other recipients of the Work or Derivative Works a copy of this License; and

You must cause any modified files to carry prominent notices stating that You changed the files; and

You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of

the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License.

However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

Version 2.0, January 2004

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is

intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

You must give any other recipients of the Work or Derivative Works a copy of this License; and

You must cause any modified files to carry prominent notices stating that You changed the files; and

You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of

the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License.

However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of

this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

You must give any other recipients of the Work or Derivative Works a copy of this License; and
You must cause any modified files to carry prominent notices stating that You changed the files; and

You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or

malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. **Accepting Warranty or Additional Liability.** While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

javax.el.el-api

COMMON DEVELOPMENT AND DISTRIBUTION LICENSE (CDDL) Version 1.0

1. Definitions.

1.1. “Contributor” means each individual or entity that creates or contributes to the creation of Modifications.

1.2. “Contributor Version” means the combination of the Original Software, prior Modifications used by a Contributor (if any), and the Modifications made by that particular Contributor.

1.3. “Covered Software” means (a) the Original Software, or (b) Modifications, or (c) the combination of files containing Original Software with files containing Modifications, in each case including portions thereof.

1.4. “Executable” means the Covered Software in any form other than Source Code.

1.5. “Initial Developer” means the individual or entity that first makes Original Software available under this License.

1.6. “Larger Work” means a work which combines Covered Software or portions thereof with code not governed by the terms of this License.

1.7. “License” means this document.

1.8. “Licensable” means having the right to grant, to the maximum extent possible, whether at the time of the initial grant or subsequently acquired, any and all of the rights conveyed herein.

1.9. “Modifications” means the Source Code and Executable form of any of the following:

A. Any file that results from an addition to, deletion from or modification of the contents of a file containing Original Software or previous Modifications;

B. Any new file that contains any part of the Original Software or previous Modification; or

C. Any new file that is contributed or otherwise made available under the terms of this License.

1.10. “Original Software” means the Source Code and Executable form of computer software code that is originally released under this License.

1.11. “Patent Claims” means any patent claim(s), now owned or hereafter acquired, including without limitation, method, process, and apparatus claims, in any patent Licensable by grantor.

1.12. “Source Code” means (a) the common form of computer software code in which modifications are made and (b) associated documentation included in or with such code.

1.13. “You” (or “Your”) means an individual or a legal entity exercising rights under, and complying with all of the terms of, this License. For legal entities, “You” includes any entity which controls, is controlled by, or is under common control with You. For purposes of this

definition, “control” means (a) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (b) ownership of more than fifty percent (50%) of the outstanding shares or beneficial ownership of such entity.

2. License Grants.

2.1. The Initial Developer Grant.

Conditioned upon Your compliance with Section 3.1 below and subject to third party intellectual property claims, the Initial Developer hereby grants You a world-wide, royalty-free, non-exclusive license:

(a) under intellectual property rights (other than patent or trademark) Licensable by Initial Developer, to use, reproduce, modify, display, perform, sublicense and distribute the Original Software (or portions thereof), with or without Modifications, and/or as part of a Larger Work; and

(b) under Patent Claims infringed by the making, using or selling of Original Software, to make, have made, use, practice, sell, and offer for sale, and/or otherwise dispose of the Original Software (or portions thereof).

(c) The licenses granted in Sections 2.1(a) and (b) are effective on the date Initial Developer first distributes or otherwise makes the Original Software available to a third party under the terms of this License.

(d) Notwithstanding Section 2.1(b) above, no patent license is granted: (1) for code that You delete from the Original Software, or (2) for infringements caused by: (i) the modification of the Original Software, or (ii) the combination of the Original Software with other software or devices.

2.2. Contributor Grant.

Conditioned upon Your compliance with Section 3.1 below and subject to third party intellectual property claims, each Contributor hereby grants You a world-wide, royalty-free, non-exclusive license:

(a) under intellectual property rights (other than patent or trademark) Licensable by Contributor to use, reproduce, modify, display, perform, sublicense and distribute the Modifications created by such Contributor (or portions thereof), either on an unmodified basis, with other Modifications, as Covered Software and/or as part of a Larger Work; and

(b) under Patent Claims infringed by the making, using, or selling of Modifications made by that Contributor either alone and/or in combination with its Contributor Version (or portions of such combination), to make, use, sell, offer for sale, have made, and/or otherwise dispose of: (1) Modifications made by that Contributor (or portions thereof); and (2) the combination of Modifications made by that Contributor with its Contributor Version (or portions of such combination).

(c) The licenses granted in Sections 2.2(a) and 2.2(b) are effective on the date Contributor first distributes or otherwise makes the Modifications available to a third party.

(d) Notwithstanding Section 2.2(b) above, no patent license is granted: (1) for any code that Contributor has deleted from the Contributor Version; (2) for infringements caused by: (i) third party modifications of Contributor Version, or (ii) the combination of Modifications made by that Contributor with other software (except as part of the Contributor Version) or other devices; or (3) under Patent Claims infringed by Covered Software in the absence of Modifications made by that Contributor.

3. Distribution Obligations.

3.1. Availability of Source Code.

Any Covered Software that You distribute or otherwise make available in Executable form must also be made available in Source Code form and that Source Code form must be distributed only under the terms of this License. You must include a copy of this License with every copy of the Source Code form of the Covered Software You distribute or otherwise make available. You must inform recipients of any such Covered Software in Executable form as to how they can obtain such Covered Software in Source Code form in a reasonable manner on or through a medium customarily used for software exchange.

3.2. Modifications.

The Modifications that You create or to which You contribute are governed by the terms of this License. You represent that You believe Your Modifications are Your original creation(s) and/or You have sufficient rights to grant the rights conveyed by this License.

3.3. Required Notices.

You must include a notice in each of Your Modifications that identifies You as the Contributor of the Modification. You may not remove or alter any copyright, patent or trademark notices contained within the Covered Software, or any notices of licensing or any descriptive text giving attribution to any Contributor or the Initial Developer.

3.4. Application of Additional Terms.

You may not offer or impose any terms on any Covered Software in Source Code form that alters or restricts the applicable version of this License or the recipients' rights hereunder. You may choose to offer, and to charge a fee for, warranty, support, indemnity or liability obligations to one or more recipients of Covered Software. However, you may do so only on Your own behalf, and not on behalf of the Initial Developer or any Contributor. You must make it absolutely clear that any such warranty, support, indemnity or liability obligation is offered by You alone, and You hereby agree to indemnify the Initial Developer and every Contributor for any liability incurred by the Initial Developer or such Contributor as a result of warranty, support, indemnity or liability terms You offer.

3.5. Distribution of Executable Versions.

You may distribute the Executable form of the Covered Software under the terms of this License or under the terms of a license of Your choice, which may contain terms different from this License, provided that You are in compliance with the terms of this License and that the license for the Executable form does not attempt to limit or alter the recipient's rights in the Source Code form from the rights set forth in this License. If You distribute the Covered Software in Executable form under a different license, You must make it absolutely clear that any terms which differ from this License are offered by You alone, not by the Initial Developer or Contributor. You hereby agree to indemnify the Initial Developer and every Contributor for any liability incurred by the Initial Developer or such Contributor as a result of any such terms You offer.

3.6. Larger Works.

You may create a Larger Work by combining Covered Software with other code not governed by the terms of this License and distribute the Larger Work as a single product. In such a case, You must make sure the requirements of this License are fulfilled for the Covered Software.

4. Versions of the License.

4.1. New Versions.

Sun Microsystems, Inc. is the initial license steward and may publish revised and/or new versions of this License from time to time. Each version will be given a distinguishing version number. Except as provided in Section 4.3, no one other than the license steward has the right to modify this License.

4.2. Effect of New Versions.

You may always continue to use, distribute or otherwise make the Covered Software available under the terms of the version of the License under which You originally received the Covered Software. If the Initial Developer includes a notice in the Original Software prohibiting it from being distributed or otherwise made available under any subsequent version of the License, You must distribute and make the Covered Software available under the terms of the version of the License under which You originally received the Covered Software. Otherwise, You may also choose to use, distribute or otherwise make the Covered Software available under the terms of any subsequent version of the License published by the license steward.

4.3 Modified Versions.

When You are an Initial Developer and You want to create a new license for Your Original Software, You may create and use a modified version of this License if You: (a) rename the license and remove any references to the name of the license steward (except to note that the license differs from this License); and (b) otherwise make it clear that the license contains terms which differ from this License.

5. DISCLAIMER OF WARRANTY.

COVERED SOFTWARE IS PROVIDED UNDER THIS LICENSE ON AN “AS IS” BASIS, WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, WITHOUT LIMITATION, WARRANTIES THAT THE COVERED SOFTWARE IS FREE OF DEFECTS, MERCHANTABILITY, FIT FOR A PARTICULAR PURPOSE OR NON-INFRINGEMENT. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE COVERED SOFTWARE IS WITH YOU. SHOULD ANY COVERED SOFTWARE PROVE DEFECTIVE IN ANY RESPECT, YOU (NOT THE INITIAL DEVELOPER OR ANY OTHER CONTRIBUTOR) ASSUME THE COST OF ANY NECESSARY SERVICING, REPAIR OR CORRECTION. THIS DISCLAIMER OF WARRANTY CONSTITUTES AN ESSENTIAL PART OF THIS LICENSE. NO USE OF ANY COVERED SOFTWARE IS AUTHORIZED HEREUNDER EXCEPT UNDER THIS DISCLAIMER.

6. TERMINATION.

6.1. This License and the rights granted hereunder will terminate automatically if You fail to comply with terms herein and fail to cure such breach within 30 days of becoming aware of the breach. Provisions which, by their nature, must remain in effect beyond the termination of this License shall survive.

6.2. If You assert a patent infringement claim (excluding declaratory judgment actions) against Initial Developer or a Contributor (the Initial Developer or Contributor against whom You assert such claim is referred to as “Participant”) alleging that the Participant Software (meaning the Contributor Version where the Participant is a Contributor or the Original Software where the Participant is the Initial Developer) directly or indirectly infringes any patent, then any and all rights granted directly or indirectly to You by such Participant, the Initial Developer (if the Initial Developer is not the Participant) and all Contributors under Sections 2.1 and/or 2.2 of this License shall, upon 60 days notice from Participant terminate prospectively and automatically at the expiration of such 60 day notice period, unless if within such 60 day period You withdraw Your claim with respect to the Participant Software against such Participant either unilaterally or pursuant to a written agreement with Participant.

6.3. In the event of termination under Sections 6.1 or 6.2 above, all end user licenses that have been validly granted by You or any distributor hereunder prior to termination (excluding licenses granted to You by any distributor) shall survive termination.

7. LIMITATION OF LIABILITY.

UNDER NO CIRCUMSTANCES AND UNDER NO LEGAL THEORY, WHETHER TORT (INCLUDING NEGLIGENCE), CONTRACT, OR OTHERWISE, SHALL YOU, THE INITIAL DEVELOPER, ANY OTHER CONTRIBUTOR, OR ANY DISTRIBUTOR OF COVERED SOFTWARE, OR ANY SUPPLIER OF ANY OF SUCH PARTIES, BE LIABLE TO ANY PERSON FOR ANY INDIRECT, SPECIAL, INCIDENTAL, OR CONSEQUENTIAL DAMAGES OF ANY CHARACTER INCLUDING, WITHOUT LIMITATION, DAMAGES FOR LOST PROFITS, LOSS OF GOODWILL, WORK STOPPAGE, COMPUTER FAILURE OR MALFUNCTION, OR ANY AND ALL OTHER COMMERCIAL DAMAGES OR LOSSES, EVEN IF SUCH PARTY SHALL HAVE BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. THIS LIMITATION OF LIABILITY SHALL NOT APPLY TO LIABILITY FOR DEATH OR PERSONAL INJURY RESULTING FROM SUCH PARTY’S NEGLIGENCE TO THE EXTENT APPLICABLE LAW PROHIBITS

SUCH LIMITATION. SOME JURISDICTIONS DO NOT ALLOW THE EXCLUSION OR LIMITATION OF INCIDENTAL OR CONSEQUENTIAL DAMAGES, SO THIS EXCLUSION AND LIMITATION MAY NOT APPLY TO YOU.

8. U.S. GOVERNMENT END USERS.

The Covered Software is a “commercial item,” as that term is defined in 48 C.F.R. 2.101 (Oct. 1995), consisting of “commercial computer software” (as that term is defined at 48 C.F.R. § 252.227-7014(a)(1)) and “commercial computer software documentation” as such terms are used in 48 C.F.R. 12.212 (Sept. 1995). Consistent with 48 C.F.R. 12.212 and 48 C.F.R. 227.7202-1 through 227.7202-4 (June 1995), all U.S. Government End Users acquire Covered Software with only those rights set forth herein. This U.S. Government Rights clause is in lieu of, and supersedes, any other FAR, DFAR, or other clause or provision that addresses Government rights in computer software under this License.

9. MISCELLANEOUS.

This License represents the complete agreement concerning subject matter hereof. If any provision of this License is held to be unenforceable, such provision shall be reformed only to the extent necessary to make it enforceable. This License shall be governed by the law of the jurisdiction specified in a notice contained within the Original Software (except to the extent applicable law, if any, provides otherwise), excluding such jurisdiction’s conflict-of-law provisions. Any litigation relating to this License shall be subject to the jurisdiction of the courts located in the jurisdiction and venue specified in a notice contained within the Original Software, with the losing party responsible for costs, including, without limitation, court costs and reasonable attorneys’ fees and expenses. The application of the United Nations Convention on Contracts for the International Sale of Goods is expressly excluded. Any law or regulation which provides that the language of a contract shall be construed against the drafter shall not apply to this License. You agree that You alone are responsible for compliance with the United States export administration regulations (and the export control laws and regulation of any other countries) when You use, distribute or otherwise make available any Covered Software.

10. RESPONSIBILITY FOR CLAIMS.

As between Initial Developer and the Contributors, each party is responsible for claims and damages arising, directly or indirectly, out of its utilization of rights under this License and You agree to work with Initial Developer and Contributors to distribute such responsibility on an equitable basis. Nothing herein is intended or shall be deemed to constitute any admission of liability.

NOTICE PURSUANT TO SECTION 9 OF THE COMMON DEVELOPMENT AND DISTRIBUTION LICENSE (CDDL)

The code released under the CDDL shall be governed by the laws of the State of California (excluding conflict-of-law provisions). Any litigation relating to this License shall be subject to

the jurisdiction of the Federal Courts of the Northern District of California and the state courts of the State of California, with venue lying in Santa Clara County, California.

The GNU General Public License (GPL) Version 2, June 1991

Copyright (C) 1989, 1991 Free Software Foundation, Inc. 59 Temple Place, Suite 330, Boston, MA 02111-1307 USA

Everyone is permitted to copy and distribute verbatim copies of this license document, but changing it is not allowed.

Preamble

The licenses for most software are designed to take away your freedom to share and change it. By contrast, the GNU General Public License is intended to guarantee your freedom to share and change free software--to make sure the software is free for all its users. This General Public License applies to most of the Free Software Foundation's software and to any other program whose authors commit to using it. (Some other Free Software Foundation software is covered by the GNU Library General Public License instead.) You can apply it to your programs, too.

When we speak of free software, we are referring to freedom, not price. Our General Public Licenses are designed to make sure that you have the freedom to distribute copies of free software (and charge for this service if you wish), that you receive source code or can get it if you want it, that you can change the software or use pieces of it in new free programs; and that you know you can do these things.

To protect your rights, we need to make restrictions that forbid anyone to deny you these rights or to ask you to surrender the rights. These restrictions translate to certain responsibilities for you if you distribute copies of the software, or if you modify it.

For example, if you distribute copies of such a program, whether gratis or for a fee, you must give the recipients all the rights that you have. You must make sure that they, too, receive or can get the source code. And you must show them these terms so they know their rights.

We protect your rights with two steps: (1) copyright the software, and (2) offer you this license which gives you legal permission to copy, distribute and/or modify the software.

Also, for each author's protection and ours, we want to make certain that everyone understands that there is no warranty for this free software. If the software is modified by someone else and passed on, we want its recipients to know that what they have is not the original, so that any problems introduced by others will not reflect on the original authors' reputations.

Finally, any free program is threatened constantly by software patents. We wish to avoid the danger that redistributors of a free program will individually obtain patent licenses, in effect making the program proprietary. To prevent this, we have made it clear that any patent must be licensed for everyone's free use or not licensed at all.

The precise terms and conditions for copying, distribution and modification follow.

TERMS AND CONDITIONS FOR COPYING, DISTRIBUTION AND MODIFICATION

0. This License applies to any program or other work which contains a notice placed by the copyright holder saying it may be distributed under the terms of this General Public License. The "Program", below, refers to any such program or work, and a "work based on the Program" means either the Program or any derivative work under copyright law: that is to say, a work containing the Program or a portion of it, either verbatim or with modifications and/or translated into another language. (Hereinafter, translation is included without limitation in the term "modification".) Each licensee is addressed as "you".

Activities other than copying, distribution and modification are not covered by this License; they are outside its scope. The act of running the Program is not restricted, and the output from the Program is covered only if its contents constitute a work based on the Program (independent of having been made by running the Program). Whether that is true depends on what the Program does.

1. You may copy and distribute verbatim copies of the Program's source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice and disclaimer of warranty; keep intact all the notices that refer to this License and to the absence of any warranty; and give any other recipients of the Program a copy of this License along with the Program.

You may charge a fee for the physical act of transferring a copy, and you may at your option offer warranty protection in exchange for a fee.

2. You may modify your copy or copies of the Program or any portion of it, thus forming a work based on the Program, and copy and distribute such modifications or work under the terms of Section 1 above, provided that you also meet all of these conditions:

a) You must cause the modified files to carry prominent notices stating that you changed the files and the date of any change.

b) You must cause any work that you distribute or publish, that in whole or in part contains or is derived from the Program or any part thereof, to be licensed as a whole at no charge to all third parties under the terms of this License.

c) If the modified program normally reads commands interactively when run, you must cause it, when started running for such interactive use in the most ordinary way, to print or display an announcement including an appropriate copyright notice and a notice that there is no warranty (or else, saying that you provide a warranty) and that users may redistribute the program under these conditions, and telling the user how to view a copy of this License. (Exception: if the Program itself is interactive but does not normally print such an announcement, your work based on the Program is not required to print an announcement.)

These requirements apply to the modified work as a whole. If identifiable sections of that work are not derived from the Program, and can be reasonably considered independent and separate works in themselves, then this License, and its terms, do not apply to those sections

when you distribute them as separate works. But when you distribute the same sections as part of a whole which is a work based on the Program, the distribution of the whole must be on the terms of this License, whose permissions for other licensees extend to the entire whole, and thus to each and every part regardless of who wrote it.

Thus, it is not the intent of this section to claim rights or contest your rights to work written entirely by you; rather, the intent is to exercise the right to control the distribution of derivative or collective works based on the Program.

In addition, mere aggregation of another work not based on the Program with the Program (or with a work based on the Program) on a volume of a storage or distribution medium does not bring the other work under the scope of this License.

3. You may copy and distribute the Program (or a work based on it, under Section 2) in object code or executable form under the terms of Sections 1 and 2 above provided that you also do one of the following:

- a) Accompany it with the complete corresponding machine-readable source code, which must be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,
- b) Accompany it with a written offer, valid for at least three years, to give any third party, for a charge no more than your cost of physically performing source distribution, a complete machine-readable copy of the corresponding source code, to be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,
- c) Accompany it with the information you received as to the offer to distribute corresponding source code. (This alternative is allowed only for noncommercial distribution and only if you received the program in object code or executable form with such an offer, in accord with Subsection b above.)

The source code for a work means the preferred form of the work for making modifications to it. For an executable work, complete source code means all the source code for all modules it contains, plus any associated interface definition files, plus the scripts used to control compilation and installation of the executable. However, as a special exception, the source code distributed need not include anything that is normally distributed (in either source or binary form) with the major components (compiler, kernel, and so on) of the operating system on which the executable runs, unless that component itself accompanies the executable.

If distribution of executable or object code is made by offering access to copy from a designated place, then offering equivalent access to copy the source code from the same place counts as distribution of the source code, even though third parties are not compelled to copy the source along with the object code.

4. You may not copy, modify, sublicense, or distribute the Program except as expressly provided under this License. Any attempt otherwise to copy, modify, sublicense or distribute the Program is void, and will automatically terminate your rights under this License. However,

parties who have received copies, or rights, from you under this License will not have their licenses terminated so long as such parties remain in full compliance.

5. You are not required to accept this License, since you have not signed it. However, nothing else grants you permission to modify or distribute the Program or its derivative works. These actions are prohibited by law if you do not accept this License. Therefore, by modifying or distributing the Program (or any work based on the Program), you indicate your acceptance of this License to do so, and all its terms and conditions for copying, distributing or modifying the Program or works based on it.

6. Each time you redistribute the Program (or any work based on the Program), the recipient automatically receives a license from the original licensor to copy, distribute or modify the Program subject to these terms and conditions. You may not impose any further restrictions on the recipients' exercise of the rights granted herein. You are not responsible for enforcing compliance by third parties to this License.

7. If, as a consequence of a court judgment or allegation of patent infringement or for any other reason (not limited to patent issues), conditions are imposed on you (whether by court order, agreement or otherwise) that contradict the conditions of this License, they do not excuse you from the conditions of this License. If you cannot distribute so as to satisfy simultaneously your obligations under this License and any other pertinent obligations, then as a consequence you may not distribute the Program at all. For example, if a patent license would not permit royalty-free redistribution of the Program by all those who receive copies directly or indirectly through you, then the only way you could satisfy both it and this License would be to refrain entirely from distribution of the Program.

If any portion of this section is held invalid or unenforceable under any particular circumstance, the balance of the section is intended to apply and the section as a whole is intended to apply in other circumstances.

It is not the purpose of this section to induce you to infringe any patents or other property right claims or to contest validity of any such claims; this section has the sole purpose of protecting the integrity of the free software distribution system, which is implemented by public license practices. Many people have made generous contributions to the wide range of software distributed through that system in reliance on consistent application of that system; it is up to the author/donor to decide if he or she is willing to distribute software through any other system and a licensee cannot impose that choice.

This section is intended to make thoroughly clear what is believed to be a consequence of the rest of this License.

8. If the distribution and/or use of the Program is restricted in certain countries either by patents or by copyrighted interfaces, the original copyright holder who places the Program under this License may add an explicit geographical distribution limitation excluding those

countries, so that distribution is permitted only in or among countries not thus excluded. In such case, this License incorporates the limitation as if written in the body of this License.

9. The Free Software Foundation may publish revised and/or new versions of the General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns.

Each version is given a distinguishing version number. If the Program specifies a version number of this License which applies to it and "any later version", you have the option of following the terms and conditions either of that version or of any later version published by the Free Software Foundation. If the Program does not specify a version number of this License, you may choose any version ever published by the Free Software Foundation.

10. If you wish to incorporate parts of the Program into other free programs whose distribution conditions are different, write to the author to ask for permission. For software which is copyrighted by the Free Software Foundation, write to the Free Software Foundation; we sometimes make exceptions for this. Our decision will be guided by the two goals of preserving the free status of all derivatives of our free software and of promoting the sharing and reuse of software generally.

NO WARRANTY

11. BECAUSE THE PROGRAM IS LICENSED FREE OF CHARGE, THERE IS NO WARRANTY FOR THE PROGRAM, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES PROVIDE THE PROGRAM "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE PROGRAM IS WITH YOU. SHOULD THE PROGRAM PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION.

12. IN NO EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MAY MODIFY AND/OR REDISTRIBUTE THE PROGRAM AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE PROGRAM (INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRD PARTIES OR A FAILURE OF THE PROGRAM TO OPERATE WITH ANY OTHER PROGRAMS), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

You are entitled to receive the source code for such software. For no less than three years from the date you obtained this software package, you may download a copy of the source code for the software in this package licensed under the GPL at no charge by visiting:

Version 2.0, January 2004

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is

intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

You must give any other recipients of the Work or Derivative Works a copy of this License; and

You must cause any modified files to carry prominent notices stating that You changed the files; and

You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of

the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License.

However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

Java(TM) Transaction API (JTA) Specification ('Specification')

Version: 1.0.1B

Status: Maintenance Release

Release: November 5, 2002

Copyright 2002 Sun Microsystems, Inc.

4150 Network Circle, Santa Clara, California

95054, U.S.A

All rights reserved.

NOTICE; LIMITED LICENSE GRANTS

Sun Microsystems, Inc. ('Sun') hereby grants you a fully-paid, non-exclusive, non-transferable, worldwide, limited license (without the right to sublicense), under the Sun's applicable intellectual property rights to view, download, use and reproduce the Specification only for the purpose of internal evaluation, which shall be understood to include developing applications intended to run on an implementation of the Specification provided that such applications do not themselves implement any portion(s) of the Specification.

Sun also grants you a perpetual, non-exclusive, worldwide, fully paid-up, royalty free, limited license (without the right to sublicense) under any applicable copyrights or patent rights it may have in the Specification to create and/or distribute an Independent Implementation of the Specification that: (i) fully implements the Spec(s) including all its required interfaces and functionality; (ii) does not modify, subset, superset or otherwise extend the Licensor Name Space, or include any public or protected packages, classes, Java interfaces, fields or methods within the Licensor Name Space other than those required/authorized by the Specification or Specifications being implemented; and (iii) passes the TCK (including satisfying the requirements of the applicable TCK Users Guide) for such Specification. The foregoing license is expressly conditioned on your not acting outside its scope. No license is granted hereunder for any other purpose.

You need not include limitations (i)-(iii) from the previous paragraph or any other particular 'pass through' requirements in any license You grant concerning the use of your Independent Implementation or products derived from it. However, except with respect to implementations of the Specification (and products derived from them) that satisfy limitations (i)-(iii) from the previous paragraph, You may neither: (a) grant or otherwise pass through to your licensees any licenses under Sun's applicable intellectual property rights; nor (b) authorize your licensees to make any claims concerning their implementation's compliance with the Spec in question.

For the purposes of this Agreement: 'Independent Implementation' shall mean an implementation of the Specification that neither derives from any of Sun's source code or binary code materials nor, except with an appropriate and separate license from Sun, includes any of Sun's source code or binary code materials; and 'Licensor Name Space' shall mean the public class or interface declarations whose names begin with 'java', 'javax', 'com.sun' or their equivalents in any subsequent naming convention adopted by Sun through the Java Community Process, or any recognized successors or replacements thereof.

This Agreement will terminate immediately without notice from Sun if you fail to comply with any material provision of or act outside the scope of the licenses granted above.

TRADEMARKS

No right, title, or interest in or to any trademarks, service marks, or trade names of Sun or Sun's licensors is granted hereunder. Sun, Sun Microsystems, the Sun logo, Java, and the Java Coffee Cup logo are trademarks or registered trademarks of Sun Microsystems, Inc. in the U.S. and other countries.

DISCLAIMER OF WARRANTIES

THE SPECIFICATION IS PROVIDED 'AS IS'. SUN MAKES NO REPRESENTATIONS OR WARRANTIES, EITHER EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO, WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, OR NON-INFRINGEMENT, THAT THE CONTENTS OF THE SPECIFICATION ARE SUITABLE FOR ANY PURPOSE OR THAT ANY PRACTICE OR IMPLEMENTATION OF SUCH CONTENTS WILL NOT INFRINGE ANY THIRD PARTY PATENTS, COPYRIGHTS, TRADE SECRETS OR OTHER RIGHTS. This document does not represent any commitment to release or implement any portion of the Specification in any product.

THE SPECIFICATION COULD INCLUDE TECHNICAL INACCURACIES OR TYPOGRAPHICAL ERRORS. CHANGES ARE PERIODICALLY ADDED TO THE INFORMATION THEREIN; THESE CHANGES WILL BE INCORPORATED INTO NEW VERSIONS OF THE SPECIFICATION, IF ANY. SUN MAY MAKE IMPROVEMENTS AND/OR CHANGES TO THE PRODUCT(S) AND/OR THE PROGRAM(S) DESCRIBED IN THE SPECIFICATION AT ANY TIME. Any use of such changes in the Specification will be governed by the then-current license for the applicable version of the Specification.

LIMITATION OF LIABILITY

TO THE EXTENT NOT PROHIBITED BY LAW, IN NO EVENT WILL SUN OR ITS LICENSORS BE LIABLE FOR ANY DAMAGES, INCLUDING WITHOUT LIMITATION, LOST REVENUE, PROFITS OR DATA, OR FOR SPECIAL, INDIRECT, CONSEQUENTIAL, INCIDENTAL OR PUNITIVE DAMAGES, HOWEVER CAUSED AND REGARDLESS OF THE THEORY OF LIABILITY, ARISING OUT OF OR RELATED TO ANY FURNISHING, PRACTICING, MODIFYING OR ANY USE OF THE SPECIFICATION, EVEN IF SUN AND/OR ITS LICENSORS HAVE BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

You will indemnify, hold harmless, and defend Sun and its licensors from any claims arising or resulting from: (i) your use of the Specification; (ii) the use or distribution of your Java application, applet and/or clean room implementation; and/or (iii) any claims that later

versions or releases of any Specification furnished to you are incompatible with the Specification provided to you under this license.

RESTRICTED RIGHTS LEGEND

U.S. Government: If this Specification is being acquired by or on behalf of the U.S. Government or by a U.S. Government prime contractor or subcontractor (at any tier), then the Government's rights in the Software and accompanying documentation shall be only as set forth in this license; this is in accordance with 48 C.F.R. 227.7201 through 227.7202-4 (for Department of Defense (DoD) acquisitions) and with 48 C.F.R. 2.101 and 12.212 (for non-DoD acquisitions).

REPORT

You may wish to report any ambiguities, inconsistencies or inaccuracies you may find in connection with your use of the Specification ('Feedback'). To the extent that you provide Sun with any Feedback, you hereby: (i) agree that such Feedback is provided on a non-proprietary and non-confidential basis, and (ii) grant Sun a perpetual, non-exclusive, worldwide, fully paid-up, irrevocable license, with the right to sublicense through multiple levels of sublicensees, to incorporate, disclose, and use without limitation the Feedback for any purpose related to the Specification and future versions, implementations, and test suites thereof.

Version 2.0, January 2004

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is

intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

You must give any other recipients of the Work or Derivative Works a copy of this License; and

You must cause any modified files to carry prominent notices stating that You changed the files; and

You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of

the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License.

However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

Jetty

Copyright ©, Eclipse Foundation

THE ACCOMPANYING PROGRAM IS PROVIDED UNDER THE TERMS OF THIS ECLIPSE PUBLIC LICENSE ("AGREEMENT"). ANY USE, REPRODUCTION OR DISTRIBUTION OF THE PROGRAM CONSTITUTES RECIPIENT'S ACCEPTANCE OF THIS AGREEMENT.

1. DEFINITIONS

"Contribution" means:

a) in the case of the initial Contributor, the initial code and documentation distributed under this Agreement, and

b) in the case of each subsequent Contributor:

i) changes to the Program, and

ii) additions to the Program;

where such changes and/or additions to the Program originate from and are distributed by that particular Contributor. A Contribution 'originates' from a Contributor if it was added to the Program by such Contributor itself or anyone acting on such Contributor's behalf. Contributions do not include additions to the Program which: (i) are separate modules of software distributed in conjunction with the Program under their own license agreement, and (ii) are not derivative works of the Program.

"Contributor" means any person or entity that distributes the Program.

"Licensed Patents" mean patent claims licensable by a Contributor which are necessarily infringed by the use or sale of its Contribution alone or when combined with the Program.

"Program" means the Contributions distributed in accordance with this Agreement.

"Recipient" means anyone who receives the Program under this Agreement, including all Contributors.

2. GRANT OF RIGHTS

a) Subject to the terms of this Agreement, each Contributor hereby grants Recipient a non-exclusive, worldwide, royalty-free copyright license to reproduce, prepare derivative works of, publicly display, publicly perform, distribute and sublicense the Contribution of such Contributor, if any, and such derivative works, in source code and object code form.

b) Subject to the terms of this Agreement, each Contributor hereby grants Recipient a non-exclusive, worldwide, royalty-free patent license under Licensed Patents to make, use, sell, offer to sell, import and otherwise transfer the Contribution of such Contributor, if any, in source code and object code form. This patent license shall apply to the combination of the

Contribution and the Program if, at the time the Contribution is added by the Contributor, such addition of the Contribution causes such combination to be covered by the Licensed Patents. The patent license shall not apply to any other combinations which include the Contribution. No hardware per se is licensed hereunder.

c) Recipient understands that although each Contributor grants the licenses to its Contributions set forth herein, no assurances are provided by any Contributor that the Program does not infringe the patent or other intellectual property rights of any other entity. Each Contributor disclaims any liability to Recipient for claims brought by any other entity based on infringement of intellectual property rights or otherwise. As a condition to exercising the rights and licenses granted hereunder, each Recipient hereby assumes sole responsibility to secure any other intellectual property rights needed, if any. For example, if a third party patent license is required to allow Recipient to distribute the Program, it is Recipient's responsibility to acquire that license before distributing the Program.

d) Each Contributor represents that to its knowledge it has sufficient copyright rights in its Contribution, if any, to grant the copyright license set forth in this Agreement.

3. REQUIREMENTS

A Contributor may choose to distribute the Program in object code form under its own license agreement, provided that:

a) it complies with the terms and conditions of this Agreement; and

b) its license agreement:

i) effectively disclaims on behalf of all Contributors all warranties and conditions, express and implied, including warranties or conditions of title and non-infringement, and implied warranties or conditions of merchantability and fitness for a particular purpose;

ii) effectively excludes on behalf of all Contributors all liability for damages, including direct, indirect, special, incidental and consequential damages, such as lost profits;

iii) states that any provisions which differ from this Agreement are offered by that Contributor alone and not by any other party; and

iv) states that source code for the Program is available from such Contributor, and informs licensees how to obtain it in a reasonable manner on or through a medium customarily used for software exchange.

When the Program is made available in source code form:

a) it must be made available under this Agreement; and

b) a copy of this Agreement must be included with each copy of the Program.

Contributors may not remove or alter any copyright notices contained within the Program.

Each Contributor must identify itself as the originator of its Contribution, if any, in a manner that reasonably allows subsequent Recipients to identify the originator of the Contribution.

4. COMMERCIAL DISTRIBUTION

Commercial distributors of software may accept certain responsibilities with respect to end users, business partners and the like. While this license is intended to facilitate the commercial use of the Program, the Contributor who includes the Program in a commercial product offering should do so in a manner which does not create potential liability for other Contributors. Therefore, if a Contributor includes the Program in a commercial product offering, such Contributor ("Commercial Contributor") hereby agrees to defend and indemnify every other Contributor ("Indemnified Contributor") against any losses, damages and costs (collectively "Losses") arising from claims, lawsuits and other legal actions brought by a third party against the Indemnified Contributor to the extent caused by the acts or omissions of such Commercial Contributor in connection with its distribution of the Program in a commercial product offering. The obligations in this section do not apply to any claims or Losses relating to any actual or alleged intellectual property infringement. In order to qualify, an Indemnified Contributor must: a) promptly notify the Commercial Contributor in writing of such claim, and b) allow the Commercial Contributor to control, and cooperate with the Commercial Contributor in, the defense and any related settlement negotiations. The Indemnified Contributor may participate in any such claim at its own expense.

For example, a Contributor might include the Program in a commercial product offering, Product X. That Contributor is then a Commercial Contributor. If that Commercial Contributor then makes performance claims, or offers warranties related to Product X, those performance claims and warranties are such Commercial Contributor's responsibility alone. Under this section, the Commercial Contributor would have to defend claims against the other Contributors related to those performance claims and warranties, and if a court requires any other Contributor to pay any damages as a result, the Commercial Contributor must pay those damages.

5. NO WARRANTY

EXCEPT AS EXPRESSLY SET FORTH IN THIS AGREEMENT, THE PROGRAM IS PROVIDED ON AN "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, EITHER EXPRESS OR IMPLIED INCLUDING, WITHOUT LIMITATION, ANY WARRANTIES OR CONDITIONS OF TITLE, NON-INFRINGEMENT, MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. Each Recipient is solely responsible for determining the appropriateness of using and distributing the Program and assumes all risks associated with its exercise of rights under this Agreement, including but not limited to the risks and costs of program errors, compliance with applicable laws, damage to or loss of data, programs or equipment, and unavailability or interruption of operations.

6. DISCLAIMER OF LIABILITY

EXCEPT AS EXPRESSLY SET FORTH IN THIS AGREEMENT, NEITHER RECIPIENT NOR ANY CONTRIBUTORS SHALL HAVE ANY LIABILITY FOR ANY DIRECT, INDIRECT, INCIDENTAL, SPECIAL, EXEMPLARY, OR CONSEQUENTIAL DAMAGES (INCLUDING WITHOUT LIMITATION LOST PROFITS), HOWEVER CAUSED AND ON ANY THEORY OF LIABILITY, WHETHER IN CONTRACT, STRICT LIABILITY, OR TORT (INCLUDING NEGLIGENCE OR OTHERWISE) ARISING IN ANY WAY OUT OF THE USE OR DISTRIBUTION OF THE PROGRAM OR THE EXERCISE OF ANY RIGHTS GRANTED HEREUNDER, EVEN IF ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

7. GENERAL

If any provision of this Agreement is invalid or unenforceable under applicable law, it shall not affect the validity or enforceability of the remainder of the terms of this Agreement, and without further action by the parties hereto, such provision shall be reformed to the minimum extent necessary to make such provision valid and enforceable.

If Recipient institutes patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Program itself (excluding combinations of the Program with other software or hardware) infringes such Recipient's patent(s), then such Recipient's rights granted under Section 2(b) shall terminate as of the date such litigation is filed.

All Recipient's rights under this Agreement shall terminate if it fails to comply with any of the material terms or conditions of this Agreement and does not cure such failure in a reasonable period of time after becoming aware of such noncompliance. If all Recipient's rights under this Agreement terminate, Recipient agrees to cease use and distribution of the Program as soon as reasonably practicable. However, Recipient's obligations under this Agreement and any licenses granted by Recipient relating to the Program shall continue and survive.

Everyone is permitted to copy and distribute copies of this Agreement, but in order to avoid inconsistency the Agreement is copyrighted and may only be modified in the following manner. The Agreement Steward reserves the right to publish new versions (including revisions) of this Agreement from time to time. No one other than the Agreement Steward has the right to modify this Agreement. The Eclipse Foundation is the initial Agreement Steward. The Eclipse Foundation may assign the responsibility to serve as the Agreement Steward to a suitable separate entity. Each new version of the Agreement will be given a distinguishing version number. The Program (including Contributions) may always be distributed subject to the version of the Agreement under which it was received. In addition, after a new version of the Agreement is published, Contributor may elect to distribute the Program (including its Contributions) under the new version. Except as expressly stated in Sections 2(a) and 2(b) above, Recipient receives no rights or licenses to the intellectual property of any Contributor under this Agreement, whether expressly, by implication, estoppel or otherwise. All rights in the Program not expressly granted under this Agreement are reserved.

This Agreement is governed by the laws of the State of New York and the intellectual property laws of the United States of America. No party to this Agreement will bring a legal action under

this Agreement more than one year after the cause of action arose. Each party waives its rights to a jury trial in any resulting litigation.

Version 2.0, January 2004

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the

purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution (s) alone or by combination of their Contribution(s) with the Work to which such Contribution (s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

You must give any other recipients of the Work or Derivative Works a copy of this License; and

You must cause any modified files to carry prominent notices stating that You changed the files; and

You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such

third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify,

defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

LAPACK

Version: 3.4.0

Updated November 11, 2011

LAPACK is written in Fortran77 and provides routines for solving systems of simultaneous linear equations, least-squares solutions of linear systems of equations, eigenvalue problems, and singular value problems. The associated matrix factorizations (LU, Cholesky, QR, SVD, Schur, generalized Schur) are also provided, as are related computations such as reordering of the Schur factorizations and estimating condition numbers. Dense and banded matrices are handled, but not general sparse matrices. In all areas, similar functionality is provided for real and complex matrices, in both single and double precision. Vertica statically links this to other code (compiled code co-mingled in the same binary files).

libgfortran

Open source component version 4.8.2

Description

The libgfortran contains a Fortran shared library, needed to run Fortran dynamically-linked programs, required for the Vertica LAPACK library addition.

The GNU General Public License (GPL) with Special Library Exception

The author has provided an exception to the GPL allowing the library to be linked with other programs provided that some specific conditions are met. Refer to the license text.

Preamble

The licenses for most software are designed to take away your freedom to share and change it. By contrast, the GNU General Public License is intended to guarantee your freedom to share and change free software--to make sure the software is free for all its users. This General Public License applies to most of the Free Software Foundation's software and to any other program whose authors commit to using it. (Some other Free Software Foundation software is covered by the GNU Library General Public License instead.) You can apply it to your programs, too.

When we speak of free software, we are referring to freedom, not price. Our General Public Licenses are designed to make sure that you have the freedom to distribute copies of free software (and charge for this service if you wish), that you receive source code or can get it if you want it, that you can change the software or use pieces of it in new free programs; and that you know you can do these things.

To protect your rights, we need to make restrictions that forbid anyone to deny you these rights or to ask you to surrender the rights. These restrictions translate to certain responsibilities for you if you distribute copies of the software, or if you modify it.

For example, if you distribute copies of such a program, whether gratis or for a fee, you must give the recipients all the rights that you have. You must make sure that they, too, receive or can get the source code. And you must show them these terms so they know their rights.

We protect your rights with two steps: (1) copyright the software, and (2) offer you this license which gives you legal permission to copy, distribute and/or modify the software.

Also, for each author's protection and ours, we want to make certain that everyone understands that there is no warranty for this free software. If the software is modified by someone else and passed on, we want its recipients to know that what they have is not the

original, so that any problems introduced by others will not reflect on the original authors' reputations.

Finally, any free program is threatened constantly by software patents. We wish to avoid the danger that redistributors of a free program will individually obtain patent licenses, in effect making the program proprietary. To prevent this, we have made it clear that any patent must be licensed for everyone's free use or not licensed at all.

The precise terms and conditions for copying, distribution and modification follow.

TERMS AND CONDITIONS FOR COPYING, DISTRIBUTION AND MODIFICATION

0. This License applies to any program or other work which contains a notice placed by the copyright holder saying it may be distributed under the terms of this General Public License. The "Program", below, refers to any such program or work, and a "work based on the Program" means either the Program or any derivative work under copyright law: that is to say, a work containing the Program or a portion of it, either verbatim or with modifications and/or translated into another language. (Hereinafter, translation is included without limitation in the term "modification".) Each licensee is addressed as "you".

Activities other than copying, distribution and modification are not covered by this License; they are outside its scope. The act of running the Program is not restricted, and the output from the Program is covered only if its contents constitute a work based on the Program (independent of having been made by running the Program). Whether that is true depends on what the Program does.

1. You may copy and distribute verbatim copies of the Program's source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice and disclaimer of warranty; keep intact all the notices that refer to this License and to the absence of any warranty; and give any other recipients of the Program a copy of this License along with the Program.

You may charge a fee for the physical act of transferring a copy, and you may at your option offer warranty protection in exchange for a fee.

2. You may modify your copy or copies of the Program or any portion of it, thus forming a work based on the Program, and copy and distribute such modifications or work under the terms of Section 1 above, provided that you also meet all of these conditions:

a) You must cause the modified files to carry prominent notices stating that you changed the files and the date of any change.

b) You must cause any work that you distribute or publish, that in whole or in part contains or is derived from the Program or any part thereof, to be licensed as a whole at no charge to all third parties under the terms of this License.

c) If the modified program normally reads commands interactively when run, you must cause it, when started running for such interactive use in the most ordinary way, to print or display

an announcement including an appropriate copyright notice and a notice that there is no warranty (or else, saying that you provide a warranty) and that users may redistribute the program under these conditions, and telling the user how to view a copy of this License. (Exception: if the Program itself is interactive but does not normally print such an announcement, your work based on the Program is not required to print an announcement.)

These requirements apply to the modified work as a whole. If identifiable sections of that work are not derived from the Program, and can be reasonably considered independent and separate works in themselves, then this License, and its terms, do not apply to those sections when you distribute them as separate works. But when you distribute the same sections as part of a whole which is a work based on the Program, the distribution of the whole must be on the terms of this License, whose permissions for other licensees extend to the entire whole, and thus to each and every part regardless of who wrote it.

Thus, it is not the intent of this section to claim rights or contest your rights to work written entirely by you; rather, the intent is to exercise the right to control the distribution of derivative or collective works based on the Program.

In addition, mere aggregation of another work not based on the Program with the Program (or with a work based on the Program) on a volume of a storage or distribution medium does not bring the other work under the scope of this License.

3. You may copy and distribute the Program (or a work based on it, under Section 2) in object code or executable form under the terms of Sections 1 and 2 above provided that you also do one of the following:

- a) Accompany it with the complete corresponding machine-readable source code, which must be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,
- b) Accompany it with a written offer, valid for at least three years, to give any third party, for a charge no more than your cost of physically performing source distribution, a complete machine-readable copy of the corresponding source code, to be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,
- c) Accompany it with the information you received as to the offer to distribute corresponding source code. (This alternative is allowed only for noncommercial distribution and only if you received the program in object code or executable form with such an offer, in accord with Subsection b above.)

The source code for a work means the preferred form of the work for making modifications to it. For an executable work, complete source code means all the source code for all modules it contains, plus any associated interface definition files, plus the scripts used to control compilation and installation of the executable. However, as a special exception, the source code distributed need not include anything that is normally distributed (in either source or

binary form) with the major components (compiler, kernel, and so on) of the operating system on which the executable runs, unless that component itself accompanies the executable.

If distribution of executable or object code is made by offering access to copy from a designated place, then offering equivalent access to copy the source code from the same place counts as distribution of the source code, even though third parties are not compelled to copy the source along with the object code.

4. You may not copy, modify, sublicense, or distribute the Program except as expressly provided under this License. Any attempt otherwise to copy, modify, sublicense or distribute the Program is void, and will automatically terminate your rights under this License. However, parties who have received copies, or rights, from you under this License will not have their licenses terminated so long as such parties remain in full compliance.

5. You are not required to accept this License, since you have not signed it. However, nothing else grants you permission to modify or distribute the Program or its derivative works. These actions are prohibited by law if you do not accept this License. Therefore, by modifying or distributing the Program (or any work based on the Program), you indicate your acceptance of this License to do so, and all its terms and conditions for copying, distributing or modifying the Program or works based on it.

6. Each time you redistribute the Program (or any work based on the Program), the recipient automatically receives a license from the original licensor to copy, distribute or modify the Program subject to these terms and conditions. You may not impose any further restrictions on the recipients' exercise of the rights granted herein. You are not responsible for enforcing compliance by third parties to this License.

7. If, as a consequence of a court judgment or allegation of patent infringement or for any other reason (not limited to patent issues), conditions are imposed on you (whether by court order, agreement or otherwise) that contradict the conditions of this License, they do not excuse you from the conditions of this License. If you cannot distribute so as to satisfy simultaneously your obligations under this License and any other pertinent obligations, then as a consequence you may not distribute the Program at all. For example, if a patent license would not permit royalty-free redistribution of the Program by all those who receive copies directly or indirectly through you, then the only way you could satisfy both it and this License would be to refrain entirely from distribution of the Program.

If any portion of this section is held invalid or unenforceable under any particular circumstance, the balance of the section is intended to apply and the section as a whole is intended to apply in other circumstances.

It is not the purpose of this section to induce you to infringe any patents or other property right claims or to contest validity of any such claims; this section has the sole purpose of protecting the integrity of the free software distribution system, which is implemented by public license practices. Many people have made generous contributions to the wide range of

software distributed through that system in reliance on consistent application of that system; it is up to the author/donor to decide if he or she is willing to distribute software through any other system and a licensee cannot impose that choice.

This section is intended to make thoroughly clear what is believed to be a consequence of the rest of this License.

8. If the distribution and/or use of the Program is restricted in certain countries either by patents or by copyrighted interfaces, the original copyright holder who places the Program under this License may add an explicit geographical distribution limitation excluding those countries, so that distribution is permitted only in or among countries not thus excluded. In such case, this License incorporates the limitation as if written in the body of this License.

9. The Free Software Foundation may publish revised and/or new versions of the General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns.

Each version is given a distinguishing version number. If the Program specifies a version number of this License which applies to it and "any later version", you have the option of following the terms and conditions either of that version or of any later version published by the Free Software Foundation. If the Program does not specify a version number of this License, you may choose any version ever published by the Free Software Foundation.

10. If you wish to incorporate parts of the Program into other free programs whose distribution conditions are different, write to the author to ask for permission. For software which is copyrighted by the Free Software Foundation, write to the Free Software Foundation; we sometimes make exceptions for this. Our decision will be guided by the two goals of preserving the free status of all derivatives of our free software and of promoting the sharing and reuse of software generally.

NO WARRANTY

11. BECAUSE THE PROGRAM IS LICENSED FREE OF CHARGE, THERE IS NO WARRANTY FOR THE PROGRAM, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES PROVIDE THE PROGRAM "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE PROGRAM IS WITH YOU. SHOULD THE PROGRAM PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION.

12. IN NO EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MAY MODIFY AND/OR REDISTRIBUTE THE PROGRAM AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE PROGRAM (INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA

BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRD PARTIES OR A FAILURE OF THE PROGRAM TO OPERATE WITH ANY OTHER PROGRAMS), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

libio

Version 1.0

Copyright (c) 2013 Joos Kiener <Joos.Kiener@gmail.com>

Description

IO: Classe(s) for improving IO in Java. Currently there is only 1 class in this library.

OptimizedRandomAccessFile: java.io.RandomAccessFile has a readLine() method with terrible performance. It reads files byte per byte and that is very slow. OptimizedRandomAccessFile wraps java.io.RandomAccessFile and exposes all methods while having a readLine() method that performs similar to java.io.BufferedReader and hence about 100 times faster than that of java.io.RandomAccessFile while preserving correct random access.

This software consists of voluntary contributions made by many individuals (AUTHORS.txt, <http://jqueryui.com/about>) For exact contribution history, see the revision history and logs, available at <http://jquery-ui.googlecode.com/svn/>

Version 2.0, January 2004

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution (s) alone or by combination of their Contribution(s) with the Work to which such Contribution (s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

You must give any other recipients of the Work or Derivative Works a copy of this License; and

You must cause any modified files to carry prominent notices stating that You changed the files; and

You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions.

Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT,

MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

GNU GENERAL PUBLIC LICENSE Version 3, 29 June 2007

TERMS AND CONDITIONS

0. Definitions.

"This License" refers to version 3 of the GNU General Public License. "Copyright" also means copyright-like laws that apply to other kinds of works, such as semiconductor masks.

"The Program" refers to any copyrightable work licensed under this License. Each licensee is addressed as "you".

"Licensees" and "recipients" may be individuals or organizations. To "modify" a work means to copy from or adapt all or part of the work in a fashion requiring copyright permission, other than the making of an exact copy. The resulting work is called a "modified version" of the earlier work or a work "based on" the earlier work.

A "covered work" means either the unmodified Program or a work based on the Program.

To "propagate" a work means to do anything with it that, without permission, would make you directly or secondarily liable for infringement under applicable copyright law, except executing it on a computer or modifying a private copy. Propagation includes copying, distribution (with or without modification), making available to the public, and in some countries other activities as well.

To "convey" a work means any kind of propagation that enables other parties to make or receive copies. Mere interaction with a user through a computer network, with no transfer of a copy, is not conveying.

An interactive user interface displays "Appropriate Legal Notices" to the extent that it includes a convenient and prominently visible feature that (1) displays an appropriate copyright notice, and (2) tells the user that there is no warranty for the work (except to the extent that warranties are provided), that licensees may convey the work under this License, and how to view a copy of this License. If the interface presents a list of user commands or options, such as a menu, a prominent item in the list meets this criterion.

1. Source Code.

The "source code" for a work means the preferred form of the work for making modifications to it. "Object code" means any non-source form of a work.

A "Standard Interface" means an interface that either is an official standard defined by a recognized standards body, or, in the case of interfaces specified for a particular programming language, one that is widely used among developers working in that language.

The "System Libraries" of an executable work include anything, other than the work as a whole, that (a) is included in the normal form of packaging a Major Component, but which is not part of that Major Component, and (b) serves only to enable use of the work with that Major Component, or to implement a Standard Interface for which an implementation is available to the public in source code form. A "Major Component", in this context, means a major essential component (kernel, window system, and so on) of the specific operating system (if any) on which the executable work runs, or a compiler used to produce the work, or an object code interpreter used to run it.

The "Corresponding Source" for a work in object code form means all the source code needed to generate, install, and (for an executable work) run the object code and to modify the work, including scripts to control those activities. However, it does not include the work's System Libraries, or general-purpose tools or generally available free programs which are used unmodified in performing those activities but which are not part of the work. For example, Corresponding Source includes interface definition files associated with source files for the work, and the source code for shared libraries and dynamically linked subprograms that the work is specifically designed to require, such as by intimate data communication or control flow between those subprograms and other parts of the work.

The Corresponding Source need not include anything that users can regenerate automatically from other parts of the Corresponding Source. The Corresponding Source for a work in source code form is that same work.

2. Basic Permissions.

All rights granted under this License are granted for the term of copyright on the Program, and are irrevocable provided the stated conditions are met. This License explicitly affirms your unlimited permission to run the unmodified Program. The output from running a covered work is covered by this License only if the output, given its content, constitutes a covered work. This License acknowledges your rights of fair use or other equivalent, as provided by copyright law.

You may make, run and propagate covered works that you do not convey, without conditions so long as your license otherwise remains in force. You may convey covered works to others for the sole purpose of having them make modifications exclusively for you, or provide you with facilities for running those works, provided that you comply with the terms of this License in conveying all material for which you do not control copyright. Those thus making or running the covered works for you must do so exclusively on your behalf, under your direction and control, on terms that prohibit them from making any copies of your copyrighted material outside their relationship with you.

Conveying under any other circumstances is permitted solely under the conditions stated below. Sublicensing is not allowed; section 10 makes it unnecessary.

3. Protecting Users' Legal Rights From Anti-Circumvention Law.

No covered work shall be deemed part of an effective technological measure under any applicable law fulfilling obligations under article 11 of the WIPO copyright treaty adopted on 20 December 1996, or similar laws prohibiting or restricting circumvention of such measures. When you convey a covered work, you waive any legal power to forbid

circumvention of technological measures to the extent such circumvention is effected by exercising rights under this License with respect to the covered work, and you disclaim any intention to limit operation or modification of the work as a means of enforcing, against the work's users, your or third parties' legal rights to forbid circumvention of technological measures.

4. Conveying Verbatim Copies.

You may convey verbatim copies of the Program's source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice; keep intact all notices stating that this License and any non-permissive terms added in accord with section 7 apply to the code; keep intact all notices of the absence of any warranty; and give all recipients a copy of this License along with the Program.

You may charge any price or no price for each copy that you convey, and you may offer support or warranty protection for a fee.

5. Conveying Modified Source Versions.

You may convey a work based on the Program, or the modifications to produce it from the Program, in the form of source code under the terms of section 4, provided that you also meet all of these conditions:

- a) The work must carry prominent notices stating that you modified it, and giving a relevant date.
- b) The work must carry prominent notices stating that it is released under this License and any conditions added under section 7. This requirement modifies the requirement in section 4 to "keep intact all notices"
- c) You must license the entire work, as a whole, under this License to anyone who comes into possession of a copy. This License will therefore apply, along with any applicable section 7 additional terms, to the whole of the work, and all its parts, regardless of how they are packaged. This License gives no permission to license the work in any other way, but it does not invalidate such permission if you have separately received it.
- d) If the work has interactive user interfaces, each must display Appropriate Legal Notices; however, if the Program has interactive interfaces that do not display Appropriate Legal Notices, your work need not make them do so.

A compilation of a covered work with other separate and independent works, which are not by their nature extensions of the covered work, and which are not combined with it such as to form a larger program, in or on a volume of a storage or distribution medium, is called an "aggregate" if the compilation and its resulting copyright are not used to limit the access or legal rights of the compilation's users beyond what the individual works permit. Inclusion of a covered work in an aggregate does not cause this License to apply to the other parts of the aggregate.

6. Conveying Non-Source Forms.

You may convey a covered work in object code form under the terms of sections 4 and 5, provided that you also convey the machine-readable Corresponding Source under the terms of this License, in one of these ways:

- a) Convey the object code in, or embodied in, a physical product (including a physical distribution medium), accompanied by the Corresponding Source fixed on a durable physical medium customarily used for software interchange.
- b) Convey the object code in, or embodied in, a physical product (including a physical distribution medium), accompanied by a written offer, valid for at least three years and valid for as long as you offer spare parts or customer support for that product model, to give anyone who possesses the object code either (1) a copy of the Corresponding Source for all the

software in the product that is covered by this License, on a durable physical medium customarily used for software interchange, for a price no more than your reasonable cost of physically performing this conveying of source, or (2) access to copy the Corresponding Source from a network server at no charge.

c) Convey individual copies of the object code with a copy of the written offer to provide the Corresponding Source. This alternative is allowed only occasionally and noncommercially, and only if you received the object code with such an offer, in accord with subsection 6b.

d) Convey the object code by offering access from a designated place (gratis or for a charge), and offer equivalent access to the Corresponding Source in the same way through the same place at no further charge. You need not require recipients to copy the Corresponding Source along with the object code. If the place to copy the object code is a network server, the Corresponding Source may be on a different server (operated by you or a third party) that supports equivalent copying facilities, provided you maintain clear directions next to the object code saying where to find the Corresponding Source. Regardless of what server hosts the Corresponding Source, you remain obligated to ensure that it is available for as long as needed to satisfy these requirements.

e) Convey the object code using peer-to-peer transmission, provided you inform other peers where the object code and Corresponding Source of the work are being offered to the general public at no charge under subsection 6d. A separable portion of the object code, whose source code is excluded from the Corresponding Source as a System Library, need not be included in conveying the object code work.

A "User Product" is either (1) a "consumer product", which means any tangible personal property which is normally used for personal, family, or household purposes, or (2) anything designed or sold for incorporation into a dwelling. In determining whether a product is a consumer product, doubtful cases shall be resolved in favor of coverage. For a particular product received by a particular user, "normally used" refers to a typical or common use of that class of product, regardless of the status of the particular user or of the way in which the particular user actually uses, or expects or is expected to use, the product. A product is a consumer product regardless of whether the product has substantial commercial, industrial or non-consumer uses, unless such uses represent the only significant mode of use of the product.

"Installation Information" for a User Product means any methods, procedures, authorization keys, or other information required to install and execute modified versions of a covered work in that User Product from a modified version of its Corresponding Source. The information must suffice to ensure that the continued functioning of the modified object code is in no case prevented or interfered with solely because modification has been made.

If you convey an object code work under this section in, or with, or specifically for use in, a User Product, and the conveying occurs as part of a transaction in which the right of possession and use of the User Product is transferred to the recipient in perpetuity or for a fixed term

(regardless of how the transaction is characterized), the Corresponding Source conveyed under this section must be accompanied by the Installation Information. But this requirement does not apply if neither you nor any third party retains the ability to install modified object code on the User Product (for example, the work has been installed in ROM). The requirement to provide Installation Information does not include a requirement to continue to provide support service, warranty, or updates for a work that has been modified or installed by the recipient, or for the User Product in which it has been modified or installed. Access to a network may be denied when the modification itself materially and adversely affects the operation of the network or violates the rules and protocols for communication across the network.

Corresponding Source conveyed, and Installation Information provided, in accord with this section must be in a format that is publicly documented (and with an implementation available to the public in source code form), and must require no special password or key for unpacking, reading or copying.

7. Additional Terms.

"Additional permissions" are terms that supplement the terms of this License by making exceptions from one or more of its conditions. Additional permissions that are applicable to the entire Program shall be treated as though they were included in this License, to the extent that they are valid under applicable law. If additional permissions apply only to part of the Program, that part may be used separately under those permissions, but the entire Program remains governed by this License without regard to the additional permissions.

When you convey a copy of a covered work, you may at your option remove any additional permissions from that copy, or from any part of it. (Additional permissions may be written to require their own removal in certain cases when you modify the work.) You may place additional permissions on material, added by you to a covered work, for which you have or can give appropriate copyright permission. Notwithstanding any other provision of this License, for material you add to a covered work, you may (if authorized by the copyright holders of that material) supplement the terms of this License with terms.

- a) Disclaiming warranty or limiting liability differently from the terms of sections 15 and 16 of this License; or
- b) Requiring preservation of specified reasonable legal notices or author attributions in that material or in the Appropriate Legal Notices displayed by works containing it; or
- c) Prohibiting misrepresentation of the origin of that material, or requiring that modified versions of such material be marked in reasonable ways as different from the original version; or
- d) Limiting the use for publicity purposes of names of licensors or authors of the material; or
- e) Declining to grant rights under trademark law for use of some trade names, trademarks, or service marks; or

f) Requiring indemnification of licensors and authors of that material by anyone who conveys the material (or modified versions of it) with contractual assumptions of liability to the recipient, for any liability that these contractual assumptions directly impose on those licensors and authors.

All other non-permissive additional terms are considered "further restrictions" within the meaning of section 10. If the Program as you received it, or any part of it, contains a notice stating that it is governed by this License along with a term that is a further restriction, you may remove that term. If a license document contains a further restriction but permits relicensing or conveying under this License, you may add to a covered work material governed by the terms of that license document, provided that the further restriction does not survive such relicensing or conveying.

If you add terms to a covered work in accord with this section, you must place, in the relevant source files, a statement of the additional terms that apply to those files, or a notice indicating where to find the applicable terms.

Additional terms, permissive or non-permissive, may be stated in the form of a separately written license, or stated as exceptions; the above requirements apply either way.

8. Termination.

You may not propagate or modify a covered work except as expressly provided under this License. Any attempt otherwise to propagate or modify it is void, and will automatically terminate your rights under this License (including any patent licenses granted under the third paragraph of section 11).

However, if you cease all violation of this License, then your license from a particular copyright holder is reinstated (a) provisionally, unless and until the copyright holder explicitly and finally terminates your license, and (b) permanently, if the copyright holder fails to notify you of the violation by some reasonable means prior to 60 days after the cessation.

Moreover, your license from a particular copyright holder is reinstated permanently if the copyright holder notifies you of the violation by some reasonable means, this is the first time you have received notice of violation of this License (for any work) from that copyright holder, and you cure the violation prior to 30 days after your receipt of the notice.

Termination of your rights under this section does not terminate the licenses of parties who have received copies or rights from you under this License. If your rights have been terminated and not permanently reinstated, you do not qualify to receive new licenses for the same material under section 10.

9. Acceptance Not Required for Having Copies.

You are not required to accept this License in order to receive or run a copy of the Program. Ancillary propagation of a covered work occurring solely as a consequence of using peer-to-peer transmission to receive a copy likewise does not require acceptance. However, nothing

other than this License grants you permission to propagate or modify any covered work. These actions infringe copyright if you do not accept this License. Therefore, by modifying or propagating a covered work, you indicate your acceptance of this License to do so.

10. Automatic Licensing of Downstream Recipients.

Each time you convey a covered work, the recipient automatically receives a license from the original licensors, to run, modify and propagate that work, subject to this License. You are not responsible for enforcing compliance by third parties with this License.

An "entity transaction" is a transaction transferring control of an organization, or substantially all assets of one, or subdividing an organization, or merging organizations. If propagation of a covered work results from an entity transaction, each party to that transaction who receives a copy of the work also receives whatever licenses to the work the party's predecessor in interest had or could give under the previous paragraph, plus a right to possession of the Corresponding Source of the work from the predecessor in interest, if the predecessor has it or can get it with reasonable efforts.

You may not impose any further restrictions on the exercise of the rights granted or affirmed under this License. For example, you may not impose a license fee, royalty, or other charge for exercise of rights granted under this License, and you may not initiate litigation (including a cross-claim or counterclaim in a lawsuit) alleging that any patent claim is infringed by making, using, selling, offering for sale, or importing the Program or any portion of it

11. Patents.

A "contributor" is a copyright holder who authorizes use under this License of the Program or a work on which the Program is based. The work thus licensed is called the contributor's "contributor version".

A contributor's "essential patent claims" are all patent claims owned or controlled by the contributor, whether already acquired or hereafter acquired, that would be infringed by some manner, permitted by this License, of making, using, or selling its contributor version, but do not include claims that would be infringed only as a consequence of further modification of the contributor version. For purposes of this definition, "control" includes the right to grant patent sublicenses in a manner consistent with the requirements of this License.

Each contributor grants you a non-exclusive, worldwide, royalty-free patent license under the contributor's essential patent claims, to make, use, sell, offer for sale, import and otherwise run, modify and propagate the contents of its contributor version.

In the following three paragraphs, a "patent license" is any express agreement or commitment, however denominated, not to enforce a patent (such as an express permission to practice a patent or covenant not to sue for patent infringement). To "grant" such a patent license to a party means to make such an agreement or commitment not to enforce a patent against the party.

If you convey a covered work, knowingly relying on a patent license, and the Corresponding Source of the work is not available for anyone to copy, free of charge and under the terms of this License, through a publicly available network server or other readily accessible means, then you must either (1) cause the Corresponding Source to be so available, or (2) arrange to deprive yourself of the benefit of the patent license for this particular work, or (3) arrange, in a manner consistent with the requirements of this License, to extend the patent license to downstream recipients. "Knowingly relying" means you have actual knowledge that, but for the patent license, your conveying the covered work in a country, or your recipient's use of the covered work in a country, would infringe one or more identifiable patents in that country that you have reason to believe are valid.

If, pursuant to or in connection with a single transaction or arrangement, you convey, or propagate by procuring conveyance of, a covered work, and grant a patent license to some of the parties receiving the covered work authorizing them to use, propagate, modify or convey a specific copy of the covered work, then the patent license you grant is automatically extended to all recipients of the covered work and works based on it.

A patent license is "discriminatory" if it does not include within the scope of its coverage, prohibits the exercise of, or is conditioned on the non-exercise of one or more of the rights that are specifically granted under this License. You may not convey a covered work if you are a party to an arrangement with a third party that is in the business of distributing software, under which you make payment to the third party based on the extent of your activity of conveying the work, and under which the third party grants, to any of the parties who would receive the covered work from you, a discriminatory patent license (a) in connection with copies of the covered work conveyed by you (or copies made from those copies), or (b) primarily for and in connection with specific products or compilations that contain the covered work, unless you entered into that arrangement, or that patent license was granted, prior to 28 March 2007.

Nothing in this License shall be construed as excluding or limiting any implied license or other defenses to infringement that may otherwise be available to you under applicable patent law.

12. No Surrender of Others' Freedom.

If conditions are imposed on you (whether by court order, agreement or otherwise) that contradict the conditions of this License, they do not excuse you from the conditions of this License. If you cannot convey a covered work so as to satisfy simultaneously your obligations under this License and any other pertinent obligations, then as a consequence you may not convey it at all. For example, if you agree to terms that obligate you to collect a royalty for further conveying from those to whom you convey the Program, the only way you could satisfy both those terms and this License would be to refrain entirely from conveying the Program.

13. Use with the GNU Affero General Public License.

Notwithstanding any other provision of this License, you have permission to link or combine any covered work with a work licensed under version 3 of the GNU Affero General Public License into a single combined work, and to convey the resulting work. The terms of this License will continue to apply to the part which is the covered work, but the special requirements of the GNU Affero General Public License, section 13, concerning interaction through a network will apply to the combination as such.

14. Revised Versions of this License.

The Free Software Foundation may publish revised and/or new versions of the GNU General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns.

Each version is given a distinguishing version number. If the Program specifies that a certain numbered version of the GNU General Public License "or any later version" applies to it, you have the option of following the terms and conditions either of that numbered version or of any later version published by the Free Software Foundation. If the Program does not specify a version number of the GNU General Public License, you may choose any version ever published by the Free Software Foundation. If the Program specifies that a proxy can decide which future versions of the GNU General Public License can be used, that proxy's public statement of acceptance of a version permanently authorizes you to choose that version for the Program. Later license versions may give you additional or different permissions. However, no additional obligations are imposed on any author or copyright holder as a result of your choosing to follow a later version.

15. Disclaimer of Warranty.

THERE IS NO WARRANTY FOR THE PROGRAM, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES PROVIDE THE PROGRAM "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE PROGRAM IS WITH YOU. SHOULD THE PROGRAM PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION.

16. Limitation of Liability.

IN NO EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MODIFIES AND/OR CONVEYS THE PROGRAM AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE PROGRAM (INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRD PARTIES OR A FAILURE OF THE PROGRAM TO OPERATE WITH ANY OTHER PROGRAMS), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

17. Interpretation of Sections 15 and 16.

If the disclaimer of warranty and limitation of liability provided above cannot be given local legal effect according to their terms, reviewing courts shall apply local law that most closely approximates an absolute waiver of all civil liability in connection with the Program, unless a warranty or assumption of liability accompanies a copy of the Program in return for a fee.

Version 2.3

Description

opencsv - Library for reading and writing CSV in Java

Opencsv is a very simple csv (comma-separated values) parser library for Java. It supports all the basic csv-type things you're likely to want to do:

- Arbitrary numbers of values per line
- Ignoring commas in quoted elements
- Handling quoted entries with embedded carriage returns (ie entries that span multiple lines)
- Configurable separator and quote characters (or use sensible defaults)
- Read all the entries at once, or use an Iterator style model
- Creating csv files from String[] (ie. automatic escaping of embeddedquote chars)

<http://www.apache.org/licenses/>

Version 2.0, January 2004

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution

(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

You must give any other recipients of the Work or Derivative Works a copy of this License; and
You must cause any modified files to carry prominent notices stating that You changed the files; and

You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions.

Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

librdkafka-dev

Version 0.8.6

Copyright (c) 2015

Description

Library implementing the Apache Kafka protocol (development headers), librdkafka is a C implementation of the Apache Kafka protocol. It currently implements the 0.8 version of the protocol and can be used to develop both Producers and Consumers.

More information about Apache Kafka can be found at <http://kafka.apache.org/>

This package contains the development headers.

libsnappy1

Version 1.1.2

Copyright (c) 2015

Description

Snappy (libsnappy1) is a compression/decompression library. It does not aim for maximum compression, or compatibility with any other compression library; instead, it aims for very high speeds and reasonable compression. For instance, compared to the fastest mode of zlib, Snappy is an order of magnitude faster for most inputs, but the resulting compressed files are anywhere from 20% to 100% bigger. On a single core of a Core i7 processor in 64-bit mode, Snappy compresses at about 250 MB/sec or more and decompresses at about 500 MB/sec or more.

Snappy is widely used inside Google, in everything from BigTable and MapReduce to our internal RPC systems. (Snappy has previously been referred to as “Zippy” in some presentations and the likes.)

Version 4.1.2

<http://www.apache.org/licenses/>

Version 2.0, January 2004

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is

intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

You must give any other recipients of the Work or Derivative Works a copy of this License; and

You must cause any modified files to carry prominent notices stating that You changed the files; and

You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of

the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License.

However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is

intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

You must give any other recipients of the Work or Derivative Works a copy of this License; and

You must cause any modified files to carry prominent notices stating that You changed the files; and

You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of

the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License.

However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

Version 2.0, January 2004

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the

purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution (s) alone or by combination of their Contribution(s) with the Work to which such Contribution (s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

You must give any other recipients of the Work or Derivative Works a copy of this License; and

You must cause any modified files to carry prominent notices stating that You changed the files; and

You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such

third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify,

defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

Version 2.0, January 2004

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the

purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution (s) alone or by combination of their Contribution(s) with the Work to which such Contribution (s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

You must give any other recipients of the Work or Derivative Works a copy of this License; and

You must cause any modified files to carry prominent notices stating that You changed the files; and

You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such

third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify,

defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

Version 2.0, January 2004

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the

purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution (s) alone or by combination of their Contribution(s) with the Work to which such Contribution (s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

You must give any other recipients of the Work or Derivative Works a copy of this License; and

You must cause any modified files to carry prominent notices stating that You changed the files; and

You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such

third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify,

defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the

purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution (s) alone or by combination of their Contribution(s) with the Work to which such Contribution (s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

You must give any other recipients of the Work or Derivative Works a copy of this License; and

You must cause any modified files to carry prominent notices stating that You changed the files; and

You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such

third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify,

defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

Version 2.0, January 2004

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the

purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

You must give any other recipients of the Work or Derivative Works a copy of this License; and

You must cause any modified files to carry prominent notices stating that You changed the files; and

You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such

third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify,

defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

Version 2.0, January 2004

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

You must give any other recipients of the Work or Derivative Works a copy of this License; and

You must cause any modified files to carry prominent notices stating that You changed the files; and

You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within

such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions.

Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. **Accepting Warranty or Additional Liability.** While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

You must give any other recipients of the Work or Derivative Works a copy of this License; and

You must cause any modified files to carry prominent notices stating that You changed the files; and

You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within

such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions.

Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. **Accepting Warranty or Additional Liability.** While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify,

defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

org.aspectj.aspectjrt

Copyright © 2011 The Eclipse Foundation. All Rights Reserved.

THE ACCOMPANYING PROGRAM IS PROVIDED UNDER THE TERMS OF THIS ECLIPSE PUBLIC LICENSE ("AGREEMENT"). ANY USE, REPRODUCTION OR DISTRIBUTION OF THE PROGRAM CONSTITUTES RECIPIENT'S ACCEPTANCE OF THIS AGREEMENT.

1. DEFINITIONS

"Contribution" means:

a) in the case of the initial Contributor, the initial code and documentation distributed under this Agreement, and

b) in the case of each subsequent Contributor:

i) changes to the Program, and

ii) additions to the Program;

where such changes and/or additions to the Program originate from and are distributed by that particular Contributor. A Contribution 'originates' from a Contributor if it was added to the Program by such Contributor itself or anyone acting on such Contributor's behalf. Contributions do not include additions to the Program which: (i) are separate modules of software distributed in conjunction with the Program under their own license agreement, and (ii) are not derivative works of the Program.

"Contributor" means any person or entity that distributes the Program.

"Licensed Patents" mean patent claims licensable by a Contributor which are necessarily infringed by the use or sale of its Contribution alone or when combined with the Program.

"Program" means the Contributions distributed in accordance with this Agreement.

"Recipient" means anyone who receives the Program under this Agreement, including all Contributors.

2. GRANT OF RIGHTS

a) Subject to the terms of this Agreement, each Contributor hereby grants Recipient a non-exclusive, worldwide, royalty-free copyright license to reproduce, prepare derivative works of, publicly display, publicly perform, distribute and sublicense the Contribution of such Contributor, if any, and such derivative works, in source code and object code form.

b) Subject to the terms of this Agreement, each Contributor hereby grants Recipient a non-exclusive, worldwide, royalty-free patent license under Licensed Patents to make, use, sell, offer to sell, import and otherwise transfer the Contribution of such Contributor, if any, in source code and object code form. This patent license shall apply to the combination of the

Contribution and the Program if, at the time the Contribution is added by the Contributor, such addition of the Contribution causes such combination to be covered by the Licensed Patents. The patent license shall not apply to any other combinations which include the Contribution. No hardware per se is licensed hereunder.

c) Recipient understands that although each Contributor grants the licenses to its Contributions set forth herein, no assurances are provided by any Contributor that the Program does not infringe the patent or other intellectual property rights of any other entity. Each Contributor disclaims any liability to Recipient for claims brought by any other entity based on infringement of intellectual property rights or otherwise. As a condition to exercising the rights and licenses granted hereunder, each Recipient hereby assumes sole responsibility to secure any other intellectual property rights needed, if any. For example, if a third party patent license is required to allow Recipient to distribute the Program, it is Recipient's responsibility to acquire that license before distributing the Program.

d) Each Contributor represents that to its knowledge it has sufficient copyright rights in its Contribution, if any, to grant the copyright license set forth in this Agreement.

3. REQUIREMENTS

A Contributor may choose to distribute the Program in object code form under its own license agreement, provided that:

a) it complies with the terms and conditions of this Agreement; and

b) its license agreement:

i) effectively disclaims on behalf of all Contributors all warranties and conditions, express and implied, including warranties or conditions of title and non-infringement, and implied warranties or conditions of merchantability and fitness for a particular purpose;

ii) effectively excludes on behalf of all Contributors all liability for damages, including direct, indirect, special, incidental and consequential damages, such as lost profits;

iii) states that any provisions which differ from this Agreement are offered by that Contributor alone and not by any other party; and

iv) states that source code for the Program is available from such Contributor, and informs licensees how to obtain it in a reasonable manner on or through a medium customarily used for software exchange.

When the Program is made available in source code form:

a) it must be made available under this Agreement; and

b) a copy of this Agreement must be included with each copy of the Program.

Contributors may not remove or alter any copyright notices contained within the Program.

Each Contributor must identify itself as the originator of its Contribution, if any, in a manner that reasonably allows subsequent Recipients to identify the originator of the Contribution.

4. COMMERCIAL DISTRIBUTION

Commercial distributors of software may accept certain responsibilities with respect to end users, business partners and the like. While this license is intended to facilitate the commercial use of the Program, the Contributor who includes the Program in a commercial product offering should do so in a manner which does not create potential liability for other Contributors. Therefore, if a Contributor includes the Program in a commercial product offering, such Contributor ("Commercial Contributor") hereby agrees to defend and indemnify every other Contributor ("Indemnified Contributor") against any losses, damages and costs (collectively "Losses") arising from claims, lawsuits and other legal actions brought by a third party against the Indemnified Contributor to the extent caused by the acts or omissions of such Commercial Contributor in connection with its distribution of the Program in a commercial product offering. The obligations in this section do not apply to any claims or Losses relating to any actual or alleged intellectual property infringement. In order to qualify, an Indemnified Contributor must: a) promptly notify the Commercial Contributor in writing of such claim, and b) allow the Commercial Contributor to control, and cooperate with the Commercial Contributor in, the defense and any related settlement negotiations. The Indemnified Contributor may participate in any such claim at its own expense.

For example, a Contributor might include the Program in a commercial product offering, Product X. That Contributor is then a Commercial Contributor. If that Commercial Contributor then makes performance claims, or offers warranties related to Product X, those performance claims and warranties are such Commercial Contributor's responsibility alone. Under this section, the Commercial Contributor would have to defend claims against the other Contributors related to those performance claims and warranties, and if a court requires any other Contributor to pay any damages as a result, the Commercial Contributor must pay those damages.

5. NO WARRANTY

EXCEPT AS EXPRESSLY SET FORTH IN THIS AGREEMENT, THE PROGRAM IS PROVIDED ON AN "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, EITHER EXPRESS OR IMPLIED INCLUDING, WITHOUT LIMITATION, ANY WARRANTIES OR CONDITIONS OF TITLE, NON-INFRINGEMENT, MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. Each Recipient is solely responsible for determining the appropriateness of using and distributing the Program and assumes all risks associated with its exercise of rights under this Agreement, including but not limited to the risks and costs of program errors, compliance with applicable laws, damage to or loss of data, programs or equipment, and unavailability or interruption of operations.

6. DISCLAIMER OF LIABILITY

EXCEPT AS EXPRESSLY SET FORTH IN THIS AGREEMENT, NEITHER RECIPIENT NOR ANY CONTRIBUTORS SHALL HAVE ANY LIABILITY FOR ANY DIRECT, INDIRECT, INCIDENTAL, SPECIAL, EXEMPLARY, OR CONSEQUENTIAL DAMAGES (INCLUDING WITHOUT LIMITATION LOST PROFITS), HOWEVER CAUSED AND ON ANY THEORY OF LIABILITY, WHETHER IN CONTRACT, STRICT LIABILITY, OR TORT (INCLUDING NEGLIGENCE OR OTHERWISE) ARISING IN ANY WAY OUT OF THE USE OR DISTRIBUTION OF THE PROGRAM OR THE EXERCISE OF ANY RIGHTS GRANTED HEREUNDER, EVEN IF ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

7. GENERAL

If any provision of this Agreement is invalid or unenforceable under applicable law, it shall not affect the validity or enforceability of the remainder of the terms of this Agreement, and without further action by the parties hereto, such provision shall be reformed to the minimum extent necessary to make such provision valid and enforceable.

If Recipient institutes patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Program itself (excluding combinations of the Program with other software or hardware) infringes such Recipient's patent(s), then such Recipient's rights granted under Section 2(b) shall terminate as of the date such litigation is filed.

All Recipient's rights under this Agreement shall terminate if it fails to comply with any of the material terms or conditions of this Agreement and does not cure such failure in a reasonable period of time after becoming aware of such noncompliance. If all Recipient's rights under this Agreement terminate, Recipient agrees to cease use and distribution of the Program as soon as reasonably practicable. However, Recipient's obligations under this Agreement and any licenses granted by Recipient relating to the Program shall continue and survive.

Everyone is permitted to copy and distribute copies of this Agreement, but in order to avoid inconsistency the Agreement is copyrighted and may only be modified in the following manner. The Agreement Steward reserves the right to publish new versions (including revisions) of this Agreement from time to time. No one other than the Agreement Steward has the right to modify this Agreement. The Eclipse Foundation is the initial Agreement Steward. The Eclipse Foundation may assign the responsibility to serve as the Agreement Steward to a suitable separate entity. Each new version of the Agreement will be given a distinguishing version number. The Program (including Contributions) may always be distributed subject to the version of the Agreement under which it was received. In addition, after a new version of the Agreement is published, Contributor may elect to distribute the Program (including its Contributions) under the new version. Except as expressly stated in Sections 2(a) and 2(b) above, Recipient receives no rights or licenses to the intellectual property of any Contributor under this Agreement, whether expressly, by implication, estoppel or otherwise. All rights in the Program not expressly granted under this Agreement are reserved.

This Agreement is governed by the laws of the State of New York and the intellectual property laws of the United States of America. No party to this Agreement will bring a legal action under

this Agreement more than one year after the cause of action arose. Each party waives its rights to a jury trial in any resulting litigation.

THE ACCOMPANYING PROGRAM IS PROVIDED UNDER THE TERMS OF THIS ECLIPSE PUBLIC LICENSE ("AGREEMENT"). ANY USE, REPRODUCTION OR DISTRIBUTION OF THE PROGRAM CONSTITUTES RECIPIENT'S ACCEPTANCE OF THIS AGREEMENT.

1. DEFINITIONS

"Contribution" means:

a) in the case of the initial Contributor, the initial code and documentation distributed under this Agreement, and

b) in the case of each subsequent Contributor:

i) changes to the Program, and

ii) additions to the Program;

where such changes and/or additions to the Program originate from and are distributed by that particular Contributor. A Contribution 'originates' from a Contributor if it was added to the Program by such Contributor itself or anyone acting on such Contributor's behalf. Contributions do not include additions to the Program which: (i) are separate modules of software distributed in conjunction with the Program under their own license agreement, and (ii) are not derivative works of the Program.

"Contributor" means any person or entity that distributes the Program.

"Licensed Patents" mean patent claims licensable by a Contributor which are necessarily infringed by the use or sale of its Contribution alone or when combined with the Program.

"Program" means the Contributions distributed in accordance with this Agreement.

"Recipient" means anyone who receives the Program under this Agreement, including all Contributors.

2. GRANT OF RIGHTS

a) Subject to the terms of this Agreement, each Contributor hereby grants Recipient a non-exclusive, worldwide, royalty-free copyright license to reproduce, prepare derivative works of, publicly display, publicly perform, distribute and sublicense the Contribution of such Contributor, if any, and such derivative works, in source code and object code form.

b) Subject to the terms of this Agreement, each Contributor hereby grants Recipient a non-exclusive, worldwide, royalty-free patent license under Licensed Patents to make, use, sell, offer to sell, import and otherwise transfer the Contribution of such Contributor, if any, in source code and object code form. This patent license shall apply to the combination of the

Contribution and the Program if, at the time the Contribution is added by the Contributor, such addition of the Contribution causes such combination to be covered by the Licensed Patents. The patent license shall not apply to any other combinations which include the Contribution. No hardware per se is licensed hereunder.

c) Recipient understands that although each Contributor grants the licenses to its Contributions set forth herein, no assurances are provided by any Contributor that the Program does not infringe the patent or other intellectual property rights of any other entity. Each Contributor disclaims any liability to Recipient for claims brought by any other entity based on infringement of intellectual property rights or otherwise. As a condition to exercising the rights and licenses granted hereunder, each Recipient hereby assumes sole responsibility to secure any other intellectual property rights needed, if any. For example, if a third party patent license is required to allow Recipient to distribute the Program, it is Recipient's responsibility to acquire that license before distributing the Program.

d) Each Contributor represents that to its knowledge it has sufficient copyright rights in its Contribution, if any, to grant the copyright license set forth in this Agreement.

3. REQUIREMENTS

A Contributor may choose to distribute the Program in object code form under its own license agreement, provided that:

a) it complies with the terms and conditions of this Agreement; and

b) its license agreement:

i) effectively disclaims on behalf of all Contributors all warranties and conditions, express and implied, including warranties or conditions of title and non-infringement, and implied warranties or conditions of merchantability and fitness for a particular purpose;

ii) effectively excludes on behalf of all Contributors all liability for damages, including direct, indirect, special, incidental and consequential damages, such as lost profits;

iii) states that any provisions which differ from this Agreement are offered by that Contributor alone and not by any other party; and

iv) states that source code for the Program is available from such Contributor, and informs licensees how to obtain it in a reasonable manner on or through a medium customarily used for software exchange.

When the Program is made available in source code form:

a) it must be made available under this Agreement; and

b) a copy of this Agreement must be included with each copy of the Program.

Contributors may not remove or alter any copyright notices contained within the Program.

Each Contributor must identify itself as the originator of its Contribution, if any, in a manner that reasonably allows subsequent Recipients to identify the originator of the Contribution.

4. COMMERCIAL DISTRIBUTION

Commercial distributors of software may accept certain responsibilities with respect to end users, business partners and the like. While this license is intended to facilitate the commercial use of the Program, the Contributor who includes the Program in a commercial product offering should do so in a manner which does not create potential liability for other Contributors. Therefore, if a Contributor includes the Program in a commercial product offering, such Contributor ("Commercial Contributor") hereby agrees to defend and indemnify every other Contributor ("Indemnified Contributor") against any losses, damages and costs (collectively "Losses") arising from claims, lawsuits and other legal actions brought by a third party against the Indemnified Contributor to the extent caused by the acts or omissions of such Commercial Contributor in connection with its distribution of the Program in a commercial product offering. The obligations in this section do not apply to any claims or Losses relating to any actual or alleged intellectual property infringement. In order to qualify, an Indemnified Contributor must: a) promptly notify the Commercial Contributor in writing of such claim, and b) allow the Commercial Contributor to control, and cooperate with the Commercial Contributor in, the defense and any related settlement negotiations. The Indemnified Contributor may participate in any such claim at its own expense.

For example, a Contributor might include the Program in a commercial product offering, Product X. That Contributor is then a Commercial Contributor. If that Commercial Contributor then makes performance claims, or offers warranties related to Product X, those performance claims and warranties are such Commercial Contributor's responsibility alone. Under this section, the Commercial Contributor would have to defend claims against the other Contributors related to those performance claims and warranties, and if a court requires any other Contributor to pay any damages as a result, the Commercial Contributor must pay those damages.

5. NO WARRANTY

EXCEPT AS EXPRESSLY SET FORTH IN THIS AGREEMENT, THE PROGRAM IS PROVIDED ON AN "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, EITHER EXPRESS OR IMPLIED INCLUDING, WITHOUT LIMITATION, ANY WARRANTIES OR CONDITIONS OF TITLE, NON-INFRINGEMENT, MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. Each Recipient is solely responsible for determining the appropriateness of using and distributing the Program and assumes all risks associated with its exercise of rights under this Agreement, including but not limited to the risks and costs of program errors, compliance with applicable laws, damage to or loss of data, programs or equipment, and unavailability or interruption of operations.

6. DISCLAIMER OF LIABILITY

EXCEPT AS EXPRESSLY SET FORTH IN THIS AGREEMENT, NEITHER RECIPIENT NOR ANY CONTRIBUTORS SHALL HAVE ANY LIABILITY FOR ANY DIRECT, INDIRECT, INCIDENTAL, SPECIAL, EXEMPLARY, OR CONSEQUENTIAL DAMAGES (INCLUDING WITHOUT LIMITATION LOST PROFITS), HOWEVER CAUSED AND ON ANY THEORY OF LIABILITY, WHETHER IN CONTRACT, STRICT LIABILITY, OR TORT (INCLUDING NEGLIGENCE OR OTHERWISE) ARISING IN ANY WAY OUT OF THE USE OR DISTRIBUTION OF THE PROGRAM OR THE EXERCISE OF ANY RIGHTS GRANTED HEREUNDER, EVEN IF ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

7. GENERAL

If any provision of this Agreement is invalid or unenforceable under applicable law, it shall not affect the validity or enforceability of the remainder of the terms of this Agreement, and without further action by the parties hereto, such provision shall be reformed to the minimum extent necessary to make such provision valid and enforceable.

If Recipient institutes patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Program itself (excluding combinations of the Program with other software or hardware) infringes such Recipient's patent(s), then such Recipient's rights granted under Section 2(b) shall terminate as of the date such litigation is filed.

All Recipient's rights under this Agreement shall terminate if it fails to comply with any of the material terms or conditions of this Agreement and does not cure such failure in a reasonable period of time after becoming aware of such noncompliance. If all Recipient's rights under this Agreement terminate, Recipient agrees to cease use and distribution of the Program as soon as reasonably practicable. However, Recipient's obligations under this Agreement and any licenses granted by Recipient relating to the Program shall continue and survive.

Everyone is permitted to copy and distribute copies of this Agreement, but in order to avoid inconsistency the Agreement is copyrighted and may only be modified in the following manner. The Agreement Steward reserves the right to publish new versions (including revisions) of this Agreement from time to time. No one other than the Agreement Steward has the right to modify this Agreement. The Eclipse Foundation is the initial Agreement Steward. The Eclipse Foundation may assign the responsibility to serve as the Agreement Steward to a suitable separate entity. Each new version of the Agreement will be given a distinguishing version number. The Program (including Contributions) may always be distributed subject to the version of the Agreement under which it was received. In addition, after a new version of the Agreement is published, Contributor may elect to distribute the Program (including its Contributions) under the new version. Except as expressly stated in Sections 2(a) and 2(b) above, Recipient receives no rights or licenses to the intellectual property of any Contributor under this Agreement, whether expressly, by implication, estoppel or otherwise. All rights in the Program not expressly granted under this Agreement are reserved.

This Agreement is governed by the laws of the State of New York and the intellectual property laws of the United States of America. No party to this Agreement will bring a legal action under

this Agreement more than one year after the cause of action arose. Each party waives its rights to a jury trial in any resulting litigation.

Version 2.0, January 2004

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the

purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution (s) alone or by combination of their Contribution(s) with the Work to which such Contribution (s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

You must give any other recipients of the Work or Derivative Works a copy of this License; and

You must cause any modified files to carry prominent notices stating that You changed the files; and

You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such

third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions.

Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify,

defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

Version 2.0, January 2004

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

You must give any other recipients of the Work or Derivative Works a copy of this License; and

You must cause any modified files to carry prominent notices stating that You changed the files; and

You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within

such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions.

Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. **Accepting Warranty or Additional Liability.** While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

org.eclipse.jdt.core.compiler.ecj

Copyright © 2011 The Eclipse Foundation. All Rights Reserved.

THE ACCOMPANYING PROGRAM IS PROVIDED UNDER THE TERMS OF THIS ECLIPSE PUBLIC LICENSE ("AGREEMENT"). ANY USE, REPRODUCTION OR DISTRIBUTION OF THE PROGRAM CONSTITUTES RECIPIENT'S ACCEPTANCE OF THIS AGREEMENT.

1. DEFINITIONS

"Contribution" means:

a) in the case of the initial Contributor, the initial code and documentation distributed under this Agreement, and

b) in the case of each subsequent Contributor:

i) changes to the Program, and

ii) additions to the Program;

where such changes and/or additions to the Program originate from and are distributed by that particular Contributor. A Contribution 'originates' from a Contributor if it was added to the Program by such Contributor itself or anyone acting on such Contributor's behalf. Contributions do not include additions to the Program which: (i) are separate modules of software distributed in conjunction with the Program under their own license agreement, and (ii) are not derivative works of the Program.

"Contributor" means any person or entity that distributes the Program.

"Licensed Patents" mean patent claims licensable by a Contributor which are necessarily infringed by the use or sale of its Contribution alone or when combined with the Program.

"Program" means the Contributions distributed in accordance with this Agreement.

"Recipient" means anyone who receives the Program under this Agreement, including all Contributors.

2. GRANT OF RIGHTS

a) Subject to the terms of this Agreement, each Contributor hereby grants Recipient a non-exclusive, worldwide, royalty-free copyright license to reproduce, prepare derivative works of, publicly display, publicly perform, distribute and sublicense the Contribution of such Contributor, if any, and such derivative works, in source code and object code form.

b) Subject to the terms of this Agreement, each Contributor hereby grants Recipient a non-exclusive, worldwide, royalty-free patent license under Licensed Patents to make, use, sell, offer to sell, import and otherwise transfer the Contribution of such Contributor, if any, in source code and object code form. This patent license shall apply to the combination of the

Contribution and the Program if, at the time the Contribution is added by the Contributor, such addition of the Contribution causes such combination to be covered by the Licensed Patents. The patent license shall not apply to any other combinations which include the Contribution. No hardware per se is licensed hereunder.

c) Recipient understands that although each Contributor grants the licenses to its Contributions set forth herein, no assurances are provided by any Contributor that the Program does not infringe the patent or other intellectual property rights of any other entity. Each Contributor disclaims any liability to Recipient for claims brought by any other entity based on infringement of intellectual property rights or otherwise. As a condition to exercising the rights and licenses granted hereunder, each Recipient hereby assumes sole responsibility to secure any other intellectual property rights needed, if any. For example, if a third party patent license is required to allow Recipient to distribute the Program, it is Recipient's responsibility to acquire that license before distributing the Program.

d) Each Contributor represents that to its knowledge it has sufficient copyright rights in its Contribution, if any, to grant the copyright license set forth in this Agreement.

3. REQUIREMENTS

A Contributor may choose to distribute the Program in object code form under its own license agreement, provided that:

a) it complies with the terms and conditions of this Agreement; and

b) its license agreement:

i) effectively disclaims on behalf of all Contributors all warranties and conditions, express and implied, including warranties or conditions of title and non-infringement, and implied warranties or conditions of merchantability and fitness for a particular purpose;

ii) effectively excludes on behalf of all Contributors all liability for damages, including direct, indirect, special, incidental and consequential damages, such as lost profits;

iii) states that any provisions which differ from this Agreement are offered by that Contributor alone and not by any other party; and

iv) states that source code for the Program is available from such Contributor, and informs licensees how to obtain it in a reasonable manner on or through a medium customarily used for software exchange.

When the Program is made available in source code form:

a) it must be made available under this Agreement; and

b) a copy of this Agreement must be included with each copy of the Program.

Contributors may not remove or alter any copyright notices contained within the Program.

Each Contributor must identify itself as the originator of its Contribution, if any, in a manner that reasonably allows subsequent Recipients to identify the originator of the Contribution.

4. COMMERCIAL DISTRIBUTION

Commercial distributors of software may accept certain responsibilities with respect to end users, business partners and the like. While this license is intended to facilitate the commercial use of the Program, the Contributor who includes the Program in a commercial product offering should do so in a manner which does not create potential liability for other Contributors. Therefore, if a Contributor includes the Program in a commercial product offering, such Contributor ("Commercial Contributor") hereby agrees to defend and indemnify every other Contributor ("Indemnified Contributor") against any losses, damages and costs (collectively "Losses") arising from claims, lawsuits and other legal actions brought by a third party against the Indemnified Contributor to the extent caused by the acts or omissions of such Commercial Contributor in connection with its distribution of the Program in a commercial product offering. The obligations in this section do not apply to any claims or Losses relating to any actual or alleged intellectual property infringement. In order to qualify, an Indemnified Contributor must: a) promptly notify the Commercial Contributor in writing of such claim, and b) allow the Commercial Contributor to control, and cooperate with the Commercial Contributor in, the defense and any related settlement negotiations. The Indemnified Contributor may participate in any such claim at its own expense.

For example, a Contributor might include the Program in a commercial product offering, Product X. That Contributor is then a Commercial Contributor. If that Commercial Contributor then makes performance claims, or offers warranties related to Product X, those performance claims and warranties are such Commercial Contributor's responsibility alone. Under this section, the Commercial Contributor would have to defend claims against the other Contributors related to those performance claims and warranties, and if a court requires any other Contributor to pay any damages as a result, the Commercial Contributor must pay those damages.

5. NO WARRANTY

EXCEPT AS EXPRESSLY SET FORTH IN THIS AGREEMENT, THE PROGRAM IS PROVIDED ON AN "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, EITHER EXPRESS OR IMPLIED INCLUDING, WITHOUT LIMITATION, ANY WARRANTIES OR CONDITIONS OF TITLE, NON-INFRINGEMENT, MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. Each Recipient is solely responsible for determining the appropriateness of using and distributing the Program and assumes all risks associated with its exercise of rights under this Agreement, including but not limited to the risks and costs of program errors, compliance with applicable laws, damage to or loss of data, programs or equipment, and unavailability or interruption of operations.

6. DISCLAIMER OF LIABILITY

EXCEPT AS EXPRESSLY SET FORTH IN THIS AGREEMENT, NEITHER RECIPIENT NOR ANY CONTRIBUTORS SHALL HAVE ANY LIABILITY FOR ANY DIRECT, INDIRECT, INCIDENTAL, SPECIAL, EXEMPLARY, OR CONSEQUENTIAL DAMAGES (INCLUDING WITHOUT LIMITATION LOST PROFITS), HOWEVER CAUSED AND ON ANY THEORY OF LIABILITY, WHETHER IN CONTRACT, STRICT LIABILITY, OR TORT (INCLUDING NEGLIGENCE OR OTHERWISE) ARISING IN ANY WAY OUT OF THE USE OR DISTRIBUTION OF THE PROGRAM OR THE EXERCISE OF ANY RIGHTS GRANTED HEREUNDER, EVEN IF ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

7. GENERAL

If any provision of this Agreement is invalid or unenforceable under applicable law, it shall not affect the validity or enforceability of the remainder of the terms of this Agreement, and without further action by the parties hereto, such provision shall be reformed to the minimum extent necessary to make such provision valid and enforceable.

If Recipient institutes patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Program itself (excluding combinations of the Program with other software or hardware) infringes such Recipient's patent(s), then such Recipient's rights granted under Section 2(b) shall terminate as of the date such litigation is filed.

All Recipient's rights under this Agreement shall terminate if it fails to comply with any of the material terms or conditions of this Agreement and does not cure such failure in a reasonable period of time after becoming aware of such noncompliance. If all Recipient's rights under this Agreement terminate, Recipient agrees to cease use and distribution of the Program as soon as reasonably practicable. However, Recipient's obligations under this Agreement and any licenses granted by Recipient relating to the Program shall continue and survive.

Everyone is permitted to copy and distribute copies of this Agreement, but in order to avoid inconsistency the Agreement is copyrighted and may only be modified in the following manner. The Agreement Steward reserves the right to publish new versions (including revisions) of this Agreement from time to time. No one other than the Agreement Steward has the right to modify this Agreement. The Eclipse Foundation is the initial Agreement Steward. The Eclipse Foundation may assign the responsibility to serve as the Agreement Steward to a suitable separate entity. Each new version of the Agreement will be given a distinguishing version number. The Program (including Contributions) may always be distributed subject to the version of the Agreement under which it was received. In addition, after a new version of the Agreement is published, Contributor may elect to distribute the Program (including its Contributions) under the new version. Except as expressly stated in Sections 2(a) and 2(b) above, Recipient receives no rights or licenses to the intellectual property of any Contributor under this Agreement, whether expressly, by implication, estoppel or otherwise. All rights in the Program not expressly granted under this Agreement are reserved.

This Agreement is governed by the laws of the State of New York and the intellectual property laws of the United States of America. No party to this Agreement will bring a legal action under

this Agreement more than one year after the cause of action arose. Each party waives its rights to a jury trial in any resulting litigation.

Version 2.0, January 2004

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the

purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution (s) alone or by combination of their Contribution(s) with the Work to which such Contribution (s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

You must give any other recipients of the Work or Derivative Works a copy of this License; and

You must cause any modified files to carry prominent notices stating that You changed the files; and

You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such

third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify,

defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

Perl Artistic License

Copyright © August 15, 1997

Preamble

The intent of this document is to state the conditions under which a Package may be copied, such that the Copyright Holder maintains some semblance of artistic control over the development of the package, while giving the users of the package the right to use and distribute the Package in a more-or-less customary fashion, plus the right to make reasonable modifications.

Definitions

"Package" refers to the collection of files distributed by the Copyright Holder, and derivatives of that collection of files created through textual modification.

"Standard Version" refers to such a Package if it has not been modified, or has been modified in accordance with the wishes of the Copyright Holder as specified below.

"Copyright Holder" is whoever is named in the copyright or copyrights for the package.

"You" is you, if you're thinking about copying or distributing this Package.

"Reasonable copying fee" is whatever you can justify on the basis of media cost, duplication charges, time of people involved, and so on. (You will not be required to justify it to the Copyright Holder, but only to the computing community at large as a market that must bear the fee.)

"Freely Available" means that no fee is charged for the item itself, though there may be fees involved in handling the item. It also means that recipients of the item may redistribute it under the same conditions they received it.

1. You may make and give away verbatim copies of the source form of the Standard Version of this Package without restriction, provided that you duplicate all of the original copyright notices and associated disclaimers.
2. You may apply bug fixes, portability fixes and other modifications derived from the Public Domain or from the Copyright Holder. A Package modified in such a way shall still be considered the Standard Version.
3. You may otherwise modify your copy of this Package in any way, provided that you insert a prominent notice in each changed file stating how and when you changed that file, and provided that you do at least ONE of the following:

4. place your modifications in the Public Domain or otherwise make them Freely Available, such as by posting said modifications to Usenet or an equivalent medium, or placing the modifications on a major archive site such as uunet.uu.net, or by allowing the Copyright Holder to include your modifications in the Standard Version of the Package.
 - a. use the modified Package only within your corporation or organization.
 - b. rename any nonstandard executables so the names do not conflict with standard executables, which must also be provided, and provide a separate manual page for each nonstandard executable that clearly documents how it differs from the Standard Version.
 - c. make other distribution arrangements with the Copyright Holder.
5. You may distribute the programs of this Package in object code or executable form, provided that you do at least ONE of the following:
 - a. distribute a Standard Version of the executables and library files, together with instructions (in the manual page or equivalent) on where to get the Standard Version.
 - b. accompany the distribution with the machine-readable source of the Package with your modifications.
 - c. give nonstandard executables nonstandard names, and clearly document the differences in manual pages (or equivalent), together with instructions on where to get the Standard Version.
 - d. make other distribution arrangements with the Copyright Holder.
6. You may charge a reasonable copying fee for any distribution of this Package. You may charge any fee you choose for support of this Package. You may not charge a fee for this Package itself. However, you may distribute this Package in aggregate with other (possibly commercial) programs as part of a larger (possibly commercial) software distribution provided that you do not advertise this Package as a product of your own. You may embed this Package's interpreter within an executable of yours (by linking); this shall be construed as a mere form of aggregation, provided that the complete Standard Version of the interpreter is so embedded.
7. The scripts and library files supplied as input to or produced as output from the programs of this Package do not automatically fall under the copyright of this Package, but belong to whomever generated them, and may be sold commercially, and may be aggregated with this Package. If such scripts or library files are aggregated with this Package via the so-

called "undump" or "unexec" methods of producing a binary executable image, then distribution of such an image shall neither be construed as a distribution of this Package nor shall it fall under the restrictions of Paragraphs 3 and 4, provided that you do not represent such an executable image as a Standard Version of this Package.

8. C subroutines (or comparably compiled subroutines in other languages) supplied by you and linked into this Package in order to emulate subroutines and variables of the language defined by this Package shall not be considered part of this Package, but are the equivalent of input as in Paragraph 6, provided these subroutines do not change the language in any way that would cause it to fail the regression tests for the language.
9. Aggregation of this Package with a commercial distribution is always permitted provided that the use of this Package is embedded; that is, when no overt attempt is made to make this Package's interfaces visible to the end user of the commercial distribution. Such use shall not be construed as a distribution of this Package.
10. The name of the Copyright Holder may not be used to endorse or promote products derived from this software without specific prior written permission.

THIS PACKAGE IS PROVIDED "AS IS" AND WITHOUT ANY EXPRESS OR IMPLIED WARRANTIES, INCLUDING, WITHOUT LIMITATION, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE.

The End

Python

Copyright © 2001- 2012 Python Software Foundation; All Rights Reserved

This is the official license for the Python 2.7.* release.

Description

Interactive high-level object-oriented language (default version).

Python, the high-level, interactive object oriented language, includes an extensive class library with lots of goodies for network programming, system administration, sounds and graphics.

This package is a dependency package, which depends on Debian's default Python version (currently v2.7).

History of the Software

Python was created in the early 1990s by Guido van Rossum at Stichting Mathematisch Centrum (CWI, see <http://www.cwi.nl/>) in the Netherlands as a successor of a language called ABC. Guido remains Python's principal author, although it includes many contributions from others.

In 1995, Guido continued his work on Python at the Corporation for National Research Initiatives (CNRI, see <http://www.cnri.reston.va.us/>) in Reston, Virginia where he released several versions of the software.

In May 2000, Guido and the Python core development team moved to BeOpen.com to form the BeOpen PythonLabs team. In October of the same year, the PythonLabs team moved to Digital Creations (now Zope Corporation; see <http://www.zope.com/>). In 2001, the Python Software Foundation (PSF, see <http://www.python.org/psf/>) was formed, a non-profit organization created specifically to own Python-related Intellectual Property. Zope Corporation is a sponsoring member of the PSF.

All Python releases are Open Source (see <http://www.opensource.org/> for the Open Source Definition). Historically, most, but not all, Python releases have also been GPL-compatible; the table below summarizes the various releases.

Release	Derived from	Year	Owner	GPL-compatible? (1)
---------	--------------	------	-------	---------------------

0.9.0 thru 1.2		1991-1995	CWI	yes
1.3 thru 1.5.2	1.2	1995-1999	CNRI	yes
1.6	1.5.2	2000	CNRI	no
2.0	1.6	2000	BeOpen.com	no
1.6.1	1.6	2001	CNRI	yes (2)
2.1	2.0+1.6.1	2001	PSF	no
2.0.1	2.0+1.6.1	2001	PSF	yes
2.1.1	2.1+2.0.1	2001	PSF	yes
2.2	2.1.1	2001	PSF	yes
2.1.2	2.1.1	2002	PSF	yes
2.1.3	2.1.2	2002	PSF	yes
2.2.1	2.2	2002	PSF	yes
2.2.2	2.2.1	2002	PSF	yes
2.2.3	2.2.2	2003	PSF	yes
2.3	2.2.2	2002-2003	PSF	yes
2.3.1	2.3	2002-2003	PSF	yes
2.3.2	2.3.1	2002-2003	PSF	yes
2.3.3	2.3.2	2002-2003	PSF	yes
2.3.4	2.3.3	2004	PSF	yes
2.3.5	2.3.4	2005	PSF	yes
2.4	2.3	2004	PSF	yes
2.4.1	2.4	2005	PSF	yes
2.4.2	2.4.1	2005	PSF	yes
2.4.3	2.4.2	2006	PSF	yes
2.5	2.4	2006	PSF	yes
2.7	2.6	2010	PSF	yes

Note: 1. GPL-compatible doesn't mean that we're distributing Python under the GPL. All Python licenses, unlike the GPL, let you distribute a modified version without making your changes open source. The GPL-compatible licenses make it possible to combine Python with other software that is released under the GPL; the others don't.

2. According to Richard Stallman, 1.6.1 is not GPL-compatible, because its license has a choice of law clause. According to CNRI, however, Stallman's lawyer has told CNRI's lawyer that 1.6.1 is "not incompatible" with the GPL.

Thanks to the many outside volunteers who have worked under Guido's direction to make these releases possible.

Terms and Conditions for Accessing or Otherwise Using Python

PYTHON SOFTWARE FOUNDATION LICENSE VERSION 2

1. This LICENSE AGREEMENT is between the Python Software Foundation ("PSF"), and the Individual or Organization ("Licensee") accessing and otherwise using this software ("Python") in source or binary form and its associated documentation.
2. Subject to the terms and conditions of this License Agreement, PSF hereby grants Licensee a nonexclusive, royalty-free, world-wide license to reproduce, analyze, test, perform and/or display publicly, prepare derivative works, distribute, and otherwise use Python alone or in any derivative version, provided, however, that PSF's License Agreement and PSF's notice of copyright, i.e., "Copyright (c) 2001, 2002, 2003, 2004, 2005, 2006 Python Software Foundation; All Rights Reserved" are retained in Python alone or in any derivative version prepared by Licensee.
3. In the event Licensee prepares a derivative work that is based on or incorporates Python or any part thereof, and wants to make the derivative work available to others as provided herein, then Licensee hereby agrees to include in any such work a brief summary of the changes made to Python.
4. PSF is making Python available to Licensee on an "AS IS" basis. PSF MAKES NO REPRESENTATIONS OR WARRANTIES, EXPRESS OR IMPLIED. BY WAY OF EXAMPLE, BUT NOT LIMITATION, PSF MAKES NO AND DISCLAIMS ANY REPRESENTATION OR WARRANTY OF MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE OR THAT THE USE OF PYTHON WILL NOT INFRINGE ANY THIRD PARTY RIGHTS.
5. PSF SHALL NOT BE LIABLE TO LICENSEE OR ANY OTHER USERS OF PYTHON FOR ANY INCIDENTAL, SPECIAL, OR CONSEQUENTIAL DAMAGES OR LOSS AS A RESULT OF MODIFYING, DISTRIBUTING, OR OTHERWISE USING PYTHON, OR ANY DERIVATIVE THEREOF, EVEN IF ADVISED OF THE POSSIBILITY THEREOF.
6. This License Agreement will automatically terminate upon a material breach of its terms and conditions.
7. Nothing in this License Agreement shall be deemed to create any relationship of agency, partnership, or joint venture between PSF and Licensee. This License Agreement does not grant permission to use PSF trademarks or trade name in a trademark sense to endorse or promote products or services of Licensee, or any third party.
8. By copying, installing or otherwise using Python, Licensee agrees to be bound by the terms and conditions of this License Agreement.

BEOPEN.COM LICENSE AGREEMENT FOR PYTHON 2.0

BEOPEN PYTHON OPEN SOURCE LICENSE AGREEMENT VERSION 1

1. This LICENSE AGREEMENT is between BeOpen.com (“BeOpen”), having an office at 160 Saratoga Avenue, Santa Clara, CA 95051, and the Individual or Organization (“Licensee”) accessing and otherwise using this software in source or binary form and its associated documentation (“the Software”).
2. Subject to the terms and conditions of this BeOpen Python License Agreement, BeOpen hereby grants Licensee a non-exclusive, royalty-free, world-wide license to reproduce, analyze, test, perform and/or display publicly, prepare derivative works, distribute, and otherwise use the Software alone or in any derivative version, provided, however, that the BeOpen Python License is retained in the Software, alone or in any derivative version prepared by Licensee.
3. BeOpen is making the Software available to Licensee on an “AS IS” basis. BEOPEN MAKES NO REPRESENTATIONS OR WARRANTIES, EXPRESS OR IMPLIED. BY WAY OF EXAMPLE, BUT NOT LIMITATION, BEOPEN MAKES NO AND DISCLAIMS ANY REPRESENTATION OR WARRANTY OF MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE OR THAT THE USE OF THE SOFTWARE WILL NOT INFRINGE ANY THIRD PARTY RIGHTS.
4. BEOPEN SHALL NOT BE LIABLE TO LICENSEE OR ANY OTHER USERS OF THE SOFTWARE FOR ANY INCIDENTAL, SPECIAL, OR CONSEQUENTIAL DAMAGES OR LOSS AS A RESULT OF USING, MODIFYING OR DISTRIBUTING THE SOFTWARE, OR ANY DERIVATIVE THEREOF, EVEN IF ADVISED OF THE POSSIBILITY THEREOF.
5. This License Agreement will automatically terminate upon a material breach of its terms and conditions.
6. This License Agreement shall be governed by and interpreted in all respects by the law of the State of California, excluding conflict of law provisions. Nothing in this License Agreement shall be deemed to create any relationship of agency, partnership, or joint venture between BeOpen and Licensee. This License Agreement does not grant permission to use BeOpen trademarks or trade names in a trademark sense to endorse or promote products or services of Licensee, or any third party. As an exception, the “BeOpen Python”

logos available at <http://www.pythonlabs.com/logos.html> may be used according to the permissions granted on that web page.

7. By copying, installing or otherwise using the software, Licensee agrees to be bound by the terms and conditions of this License Agreement.

CNRI LICENSE AGREEMENT FOR PYTHON 1.6.1

1. This LICENSE AGREEMENT is between the Corporation for National Research Initiatives, having an office at 1895 Preston White Drive, Reston, VA 20191 (“CNRI”), and the Individual or Organization (“Licensee”) accessing and otherwise using Python 1.6.1 software in source or binary form and its associated documentation.
2. Subject to the terms and conditions of this License Agreement, CNRI hereby grants Licensee a nonexclusive, royalty-free, world-wide license to reproduce, analyze, test, perform and/or display publicly, prepare derivative works, distribute, and otherwise use Python 1.6.1 alone or in any derivative version, provided, however, that CNRI’s License Agreement and CNRI’s notice of copyright, i.e., “Copyright © 1995-2001 Corporation for National Research Initiatives; All Rights Reserved” are retained in Python 1.6.1 alone or in any derivative version prepared by Licensee. Alternately, in lieu of CNRI’s License Agreement, Licensee may substitute the following text (omitting the quotes): “Python 1.6.1 is made available subject to the terms and conditions in CNRI’s License Agreement. This Agreement together with Python 1.6.1 may be located on the Internet using the following unique, persistent identifier (known as a handle): 1895.22/1013. This Agreement may also be obtained from a proxy server on the Internet using the following URL: <http://hdl.handle.net/1895.22/1013>.”
3. In the event Licensee prepares a derivative work that is based on or incorporates Python 1.6.1 or any part thereof, and wants to make the derivative work available to others as provided herein, then Licensee hereby agrees to include in any such work a brief summary of the changes made to Python 1.6.1.
4. CNRI is making Python 1.6.1 available to Licensee on an “AS IS” basis. CNRI MAKES NO REPRESENTATIONS OR WARRANTIES, EXPRESS OR IMPLIED. BY WAY OF EXAMPLE, BUT NOT LIMITATION, CNRI MAKES NO AND DISCLAIMS ANY REPRESENTATION OR WARRANTY OF MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE OR THAT THE USE OF PYTHON 1.6.1 WILL NOT INFRINGE ANY THIRD PARTY RIGHTS.

5. CNRI SHALL NOT BE LIABLE TO LICENSEE OR ANY OTHER USERS OF PYTHON 1.6.1 FOR ANY INCIDENTAL, SPECIAL, OR CONSEQUENTIAL DAMAGES OR LOSS AS A RESULT OF MODIFYING, DISTRIBUTING, OR OTHERWISE USING PYTHON 1.6.1, OR ANY DERIVATIVE THEREOF, EVEN IF ADVISED OF THE POSSIBILITY THEREOF.
6. This License Agreement will automatically terminate upon a material breach of its terms and conditions.
7. This License Agreement shall be governed by the federal intellectual property law of the United States, including without limitation the federal copyright law, and, to the extent such U.S. federal law does not apply, by the law of the Commonwealth of Virginia, excluding Virginia's conflict of law provisions. Notwithstanding the foregoing, with regard to derivative works based on Python 1.6.1 that incorporate non-separable material that was previously distributed under the GNU General Public License (GPL), the law of the Commonwealth of Virginia shall govern this License Agreement only as to issues arising under or with respect to Paragraphs 4, 5, and 7 of this License Agreement. Nothing in this License Agreement shall be deemed to create any relationship of agency, partnership, or joint venture between CNRI and Licensee. This License Agreement does not grant permission to use CNRI trademarks or trade name in a trademark sense to endorse or promote products or services of Licensee, or any third party.
8. By clicking on the "ACCEPT" button where indicated, or by copying, installing or otherwise using Python 1.6.1, Licensee agrees to be bound by the terms and conditions of this License Agreement.

ACCEPT

CWI LICENSE AGREEMENT FOR PYTHON 0.9.0 THROUGH 1.2

Copyright © 1991 - 1995, Stichting Mathematisch Centrum Amsterdam, The Netherlands. All rights reserved.

Permission to use, copy, modify, and distribute this software and its documentation for any purpose and without fee is hereby granted, provided that the above copyright notice appear in all copies and that both that copyright notice and this permission notice appear in supporting documentation, and that the name of Stichting Mathematisch Centrum or CWI not be used in advertising or publicity pertaining to distribution of the software without specific, written prior permission.

STICHTING MATHEMATISCH CENTRUM DISCLAIMS ALL WARRANTIES WITH REGARD TO THIS SOFTWARE, INCLUDING ALL IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS, IN NO EVENT SHALL STICHTING MATHEMATISCH CENTRUM BE LIABLE FOR ANY SPECIAL, INDIRECT OR CONSEQUENTIAL DAMAGES OR ANY DAMAGES WHATSOEVER RESULTING FROM LOSS OF USE, DATA OR PROFITS, WHETHER IN AN ACTION OF CONTRACT, NEGLIGENCE OR OTHER TORTIOUS ACTION, ARISING OUT OF OR IN CONNECTION WITH THE USE OR PERFORMANCE OF THIS SOFTWARE.

Python3

A. HISTORY OF THE SOFTWARE

=====

Python was created in the early 1990s by Guido van Rossum at Stichting Mathematisch Centrum (CWI, see <http://www.cwi.nl>) in the Netherlands as a successor of a language called ABC. Guido remains Python's principal author, although it includes many contributions from others.

In 1995, Guido continued his work on Python at the Corporation for National Research Initiatives (CNRI, see <http://www.cnri.reston.va.us>) in Reston, Virginia where he released several versions of the software.

In May 2000, Guido and the Python core development team moved to BeOpen.com to form the BeOpen PythonLabs team. In October of the same year, the PythonLabs team moved to Digital Creations (now Zope Corporation, see <http://www.zope.com>). In 2001, the Python Software Foundation (PSF, see <http://www.python.org/psf/>) was formed, a non-profit organization created specifically to own Python-related Intellectual Property. Zope Corporation is a sponsoring member of the PSF.

All Python releases are Open Source (see <http://www.opensource.org> for the Open Source Definition). Historically, most, but not all, Python releases have also been GPL-compatible; the table below summarizes the various releases.

Release Derived Year Owner GPL-from compatible? (1)

0.9.0 thru 1.2	1991-1995	CWI	yes	
1.3 thru 1.5.2	1.2	1995-1999	CNRI	yes
1.6	1.5.2	2000	CNRI	no
2.0	1.6	2000	BeOpen.com	no
1.6.1	1.6	2001	CNRI	yes (2)
2.1	2.0+1.6.1	2001	PSF	no
2.0.1	2.0+1.6.1	2001	PSF	yes
2.1.1	2.1+2.0.1	2001	PSF	yes
2.1.2	2.1.1	2002	PSF	yes
2.1.3	2.1.2	2002	PSF	yes
2.2 and above	2.1.1	2001-now	PSF	yes

Footnotes:

(1) GPL-compatible doesn't mean that we're distributing Python under the GPL. All Python licenses, unlike the GPL, let you distribute a modified version without making your changes open source. The GPL-compatible licenses make it possible to combine Python with othersoftware that is released under the GPL; the others don't.

(2) According to Richard Stallman, 1.6.1 is not GPL-compatible, because its license has a choice of law clause. According to CNRI, however, Stallman's lawyer has told CNRI's lawyer that 1.6.1 is "not incompatible" with the GPL.

Thanks to the many outside volunteers who have worked under Guido's direction to make these releases possible.

B. TERMS AND CONDITIONS FOR ACCESSING OR OTHERWISE USING PYTHON

=====

PYTHON SOFTWARE FOUNDATION LICENSE VERSION 2

1. This LICENSE AGREEMENT is between the Python Software Foundation ("PSF"), and the Individual or Organization ("Licensee") accessing and otherwise using this software ("Python") in source or binary form and its associated documentation.

2. Subject to the terms and conditions of this License Agreement, PSF hereby grants Licensee a nonexclusive, royalty-free, world-wide license to reproduce, analyze, test, perform and/or display publicly, prepare derivative works, distribute, and otherwise use Python alone or in any derivative version, provided, however, that PSF's License Agreement and PSF's notice of copyright, i.e., "Copyright (c) 2001, 2002, 2003, 2004, 2005, 2006, 2007, 2008, 2009, 2010, 2011, 2012, 2013, 2014, 2015 Python Software Foundation; All Rights Reserved" are retained in Python alone or in any derivative version prepared by Licensee.

3. In the event Licensee prepares a derivative work that is based on or incorporates Python or any part thereof, and wants to make the derivative work available to others as provided herein, then Licensee hereby agrees to include in any such work a brief summary of the changes made to Python.

4. PSF is making Python available to Licensee on an "AS IS" basis. PSF MAKES NO REPRESENTATIONS OR WARRANTIES, EXPRESS OR IMPLIED. BY WAY OF EXAMPLE, BUT NOT LIMITATION, PSF MAKES NO AND DISCLAIMS ANY REPRESENTATION OR WARRANTY OF MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE OR THAT THE USE OF PYTHON WILL NOT INFRINGE ANY THIRD PARTY RIGHTS.

5. PSF SHALL NOT BE LIABLE TO LICENSEE OR ANY OTHER USERS OF PYTHON FOR ANY INCIDENTAL, SPECIAL, OR CONSEQUENTIAL DAMAGES OR LOSS AS A RESULT OF MODIFYING, DISTRIBUTING, OR OTHERWISE USING PYTHON, OR ANY DERIVATIVE THEREOF, EVEN IF ADVISED OF THE POSSIBILITY THEREOF.

6. This License Agreement will automatically terminate upon a material breach of its terms and conditions.

7. Nothing in this License Agreement shall be deemed to create any relationship of agency, partnership, or joint venture between PSF and Licensee. This License Agreement does not grant permission to use PSF trademarks or trade name in a trademark sense to endorse or promote products or services of Licensee, or any third party.

8. By copying, installing or otherwise using Python, Licensee agrees to be bound by the terms and conditions of this License Agreement.

BEOPEN.COM LICENSE AGREEMENT FOR PYTHON 2.0

BEOPEN PYTHON OPEN SOURCE LICENSE AGREEMENT VERSION 1

1. This LICENSE AGREEMENT is between BeOpen.com ("BeOpen"), having an office at 160 Saratoga Avenue, Santa Clara, CA 95051, and the Individual or Organization ("Licensee") accessing and otherwise using this software in source or binary form and its associated documentation ("the Software").

2. Subject to the terms and conditions of this BeOpen Python License Agreement, BeOpen hereby grants Licensee a non-exclusive, royalty-free, world-wide license to reproduce, analyze, test, perform and/or display publicly, prepare derivative works, distribute, and otherwise use the Software alone or in any derivative version, provided, however, that the BeOpen Python License is retained in the Software, alone or in any derivative version prepared by Licensee.

3. BeOpen is making the Software available to Licensee on an "AS IS" basis. BEOPEN MAKES NO REPRESENTATIONS OR WARRANTIES, EXPRESS OR IMPLIED. BY WAY OF EXAMPLE, BUT NOT LIMITATION, BEOPEN MAKES NO AND DISCLAIMS ANY REPRESENTATION OR WARRANTY OF MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE OR THAT THE USE OF THE SOFTWARE WILL NOT INFRINGE ANY THIRD PARTY RIGHTS.

4. BEOPEN SHALL NOT BE LIABLE TO LICENSEE OR ANY OTHER USERS OF THE SOFTWARE FOR ANY INCIDENTAL, SPECIAL, OR CONSEQUENTIAL DAMAGES OR LOSS AS A RESULT OF USING, MODIFYING OR DISTRIBUTING THE SOFTWARE, OR ANY DERIVATIVE THEREOF, EVEN IF ADVISED OF THE POSSIBILITY THEREOF.

5. This License Agreement will automatically terminate upon a material breach of its terms and conditions.

6. This License Agreement shall be governed by and interpreted in all respects by the law of the State of California, excluding conflict of law provisions. Nothing in this License Agreement shall be deemed to create any relationship of agency, partnership, or joint venture between BeOpen and Licensee. This License Agreement does not grant permission to use BeOpen trademarks or trade names in a trademark sense to endorse or promote products or services of Licensee, or any third party. As an exception, the "BeOpen Python" logos available at

<http://www.pythonlabs.com/logos.html> may be used according to the permissions granted on that web page.

7. By copying, installing or otherwise using the software, Licensee agrees to be bound by the terms and conditions of this License Agreement.

CNRI LICENSE AGREEMENT FOR PYTHON 1.6.1

1. This LICENSE AGREEMENT is between the Corporation for National Research Initiatives, having an office at 1895 Preston White Drive, Reston, VA 20191 ("CNRI"), and the Individual or Organization ("Licensee") accessing and otherwise using Python 1.6.1 software in source or binary form and its associated documentation.

2. Subject to the terms and conditions of this License Agreement, CNRI hereby grants Licensee a nonexclusive, royalty-free, world-wide license to reproduce, analyze, test, perform and/or display publicly, prepare derivative works, distribute, and otherwise use Python 1.6.1

alone or in any derivative version, provided, however, that CNRI's License Agreement and CNRI's notice of copyright, i.e., "Copyright (c) 1995-2001 Corporation for National Research Initiatives; All Rights Reserved" are retained in Python 1.6.1 alone or in any derivative version prepared by Licensee. Alternately, in lieu of CNRI's License Agreement, Licensee may substitute the following text (omitting the quotes): "Python 1.6.1 is made available subject to the terms and conditions in CNRI's License Agreement. This Agreement together with Python 1.6.1 may be located on the Internet using the following unique, persistent identifier (known as a handle): 1895.22/1013. This Agreement may also be obtained from a proxy server on the Internet using the following URL: <http://hdl.handle.net/1895.22/1013>".

3. In the event Licensee prepares a derivative work that is based on or incorporates Python 1.6.1 or any part thereof, and wants to make the derivative work available to others as provided herein, then Licensee hereby agrees to include in any such work a brief summary of the changes made to Python 1.6.1.

4. CNRI is making Python 1.6.1 available to Licensee on an "AS IS" basis. CNRI MAKES NO REPRESENTATIONS OR WARRANTIES, EXPRESS OR IMPLIED. BY WAY OF EXAMPLE, BUT NOT LIMITATION, CNRI MAKES NO AND DISCLAIMS ANY REPRESENTATION OR WARRANTY OF MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE OR THAT THE USE OF PYTHON 1.6.1 WILL NOT INFRINGE ANY THIRD PARTY RIGHTS.

5. CNRI SHALL NOT BE LIABLE TO LICENSEE OR ANY OTHER USERS OF PYTHON 1.6.1 FOR ANY INCIDENTAL, SPECIAL, OR CONSEQUENTIAL DAMAGES OR LOSS AS A RESULT OF MODIFYING, DISTRIBUTING, OR OTHERWISE USING PYTHON 1.6.1, OR ANY DERIVATIVE THEREOF, EVEN IF ADVISED OF THE POSSIBILITY THEREOF.

6. This License Agreement will automatically terminate upon a material breach of its terms and conditions.

7. This License Agreement shall be governed by the federal intellectual property law of the United States, including without limitation the federal copyright law, and, to the extent such U.S. federal law does not apply, by the law of the Commonwealth of Virginia, excluding Virginia's conflict of law provisions. Notwithstanding the foregoing, with regard to derivative works based on Python 1.6.1 that incorporate non-separable material that was previously distributed under the GNU General Public License (GPL), the law of the Commonwealth of Virginia shall govern this License Agreement only as to issues arising under or with respect to Paragraphs 4, 5, and 7 of this License Agreement. Nothing in this License Agreement shall be deemed to create any relationship of agency, partnership, or joint venture between CNRI and Licensee. This License Agreement does not grant permission to use CNRI trademarks or trade name in a trademark sense to endorse or promote products or services of Licensee, or any third party.

8. By clicking on the "ACCEPT" button where indicated, or by copying, installing or otherwise using Python 1.6.1, Licensee agrees to be bound by the terms and conditions of this License Agreement.

Description

<http://www.apache.org/licenses/>

Version 2.0, January 2004

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of

this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

You must give any other recipients of the Work or Derivative Works a copy of this License; and
You must cause any modified files to carry prominent notices stating that You changed the files; and

You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or

malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

Quartz-scheduler-quartz

Code for Quartz scheduler

Version 1.8.5

Description

<http://www.apache.org/licenses/>

Version 2.0, January 2004

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of

this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

You must give any other recipients of the Work or Derivative Works a copy of this License; and
You must cause any modified files to carry prominent notices stating that You changed the files; and

You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or

malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

R

R version 3.0.0 (2013-04-03) -- "Masked Marvel"

Copyright (C) 2013 The R Foundation for Statistical Computing

GNU GENERAL PUBLIC LICENSE Version 3, 29 June 2007

TERMS AND CONDITIONS

0. Definitions.

"This License" refers to version 3 of the GNU General Public License. "Copyright" also means copyright-like laws that apply to other kinds of works, such as semiconductor masks.

"The Program" refers to any copyrightable work licensed under this License. Each licensee is addressed as "you".

"Licensees" and "recipients" may be individuals or organizations. To "modify" a work means to copy from or adapt all or part of the work in a fashion requiring copyright permission, other than the making of an exact copy. The resulting work is called a "modified version" of the earlier work or a work "based on" the earlier work.

A "covered work" means either the unmodified Program or a work based on the Program.

To "propagate" a work means to do anything with it that, without permission, would make you directly or secondarily liable for infringement under applicable copyright law, except executing it on a computer or modifying a private copy. Propagation includes copying, distribution (with or without modification), making available to the public, and in some countries other activities as well.

To "convey" a work means any kind of propagation that enables other parties to make or receive copies. Mere interaction with a user through a computer network, with no transfer of a copy, is not conveying.

An interactive user interface displays "Appropriate Legal Notices" to the extent that it includes a convenient and prominently visible feature that (1) displays an appropriate copyright notice, and (2) tells the user that there is no warranty for the work (except to the extent that warranties are provided), that licensees may convey the work under this License, and how to view a copy of this License. If the interface presents a list of user commands or options, such as a menu, a prominent item in the list meets this criterion.

1. Source Code.

The "source code" for a work means the preferred form of the work for making modifications to it. "Object code" means any non-source form of a work.

A "Standard Interface" means an interface that either is an official standard defined by a recognized standards body, or, in the case of interfaces specified for a particular programming language, one that is widely used among developers working in that language.

The "System Libraries" of an executable work include anything, other than the work as a whole, that (a) is included in the normal form of packaging a Major Component, but which is not part of that Major Component, and (b) serves only to enable use of the work with that Major Component, or to implement a Standard Interface for which an implementation is available to the public in source code form. A "Major Component", in this context, means a major essential component (kernel, window system, and so on) of the specific operating system (if any) on which the executable work runs, or a compiler used to produce the work, or an object code interpreter used to run it.

The "Corresponding Source" for a work in object code form means all the source code needed to generate, install, and (for an executable work) run the object code and to modify the work, including scripts to control those activities. However, it does not include the work's System Libraries, or general-purpose tools or generally available free programs which are used unmodified in performing those activities but which are not part of the work. For example, Corresponding Source includes interface definition files associated with source files for the work, and the source code for shared libraries and dynamically linked subprograms that the work is specifically designed to require, such as by intimate data communication or control flow between those subprograms and other parts of the work.

The Corresponding Source need not include anything that users can regenerate automatically from other parts of the Corresponding Source. The Corresponding Source for a work in source code form is that same work.

2. Basic Permissions.

All rights granted under this License are granted for the term of copyright on the Program, and are irrevocable provided the stated conditions are met. This License explicitly affirms your unlimited permission to run the unmodified Program. The output from running a covered work is covered by this License only if the output, given its content, constitutes a covered work. This License acknowledges your rights of fair use or other equivalent, as provided by copyright law.

You may make, run and propagate covered works that you do not convey, without conditions so long as your license otherwise remains in force. You may convey covered works to others for the sole purpose of having them make modifications exclusively for you, or provide you with facilities for running those works, provided that you comply with the terms of this License in conveying all material for which you do not control copyright. Those thus making or running the covered works for you must do so exclusively on your behalf, under your direction and control, on terms that prohibit them from making any copies of your copyrighted material outside their relationship with you.

Conveying under any other circumstances is permitted solely under the conditions stated below. Sublicensing is not allowed; section 10 makes it unnecessary.

3. Protecting Users' Legal Rights From Anti-Circumvention Law.

No covered work shall be deemed part of an effective technological measure under any applicable law fulfilling obligations under article 11 of the WIPO copyright treaty adopted on 20 December 1996, or similar laws prohibiting or restricting circumvention of such measures. When you convey a covered work, you waive any legal power to forbid

circumvention of technological measures to the extent such circumvention is effected by exercising rights under this License with respect to the covered work, and you disclaim any intention to limit operation or modification of the work as a means of enforcing, against the work's users, your or third parties' legal rights to forbid circumvention of technological measures.

4. Conveying Verbatim Copies.

You may convey verbatim copies of the Program's source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice; keep intact all notices stating that this License and any non-permissive terms added in accord with section 7 apply to the code; keep intact all notices of the absence of any warranty; and give all recipients a copy of this License along with the Program.

You may charge any price or no price for each copy that you convey, and you may offer support or warranty protection for a fee.

5. Conveying Modified Source Versions.

You may convey a work based on the Program, or the modifications to produce it from the Program, in the form of source code under the terms of section 4, provided that you also meet all of these conditions:

- a) The work must carry prominent notices stating that you modified it, and giving a relevant date.
- b) The work must carry prominent notices stating that it is released under this License and any conditions added under section 7. This requirement modifies the requirement in section 4 to "keep intact all notices"
- c) You must license the entire work, as a whole, under this License to anyone who comes into possession of a copy. This License will therefore apply, along with any applicable section 7 additional terms, to the whole of the work, and all its parts, regardless of how they are packaged. This License gives no permission to license the work in any other way, but it does not invalidate such permission if you have separately received it.

d) If the work has interactive user interfaces, each must display Appropriate Legal Notices; however, if the Program has interactive interfaces that do not display Appropriate Legal Notices, your work need not make them do so.

A compilation of a covered work with other separate and independent works, which are not by their nature extensions of the covered work, and which are not combined with it such as to form a larger program, in or on a volume of a storage or distribution medium, is called an "aggregate" if the compilation and its resulting copyright are not used to limit the access or legal rights of the compilation's users beyond what the individual works permit. Inclusion of a covered work in an aggregate does not cause this License to apply to the other parts of the aggregate.

6. Conveying Non-Source Forms.

You may convey a covered work in object code form under the terms of sections 4 and 5, provided that you also convey the machine-readable Corresponding Source under the terms of this License, in one of these ways:

- a) Convey the object code in, or embodied in, a physical product (including a physical distribution medium), accompanied by the Corresponding Source fixed on a durable physical medium customarily used for software interchange.
- b) Convey the object code in, or embodied in, a physical product (including a physical distribution medium), accompanied by a written offer, valid for at least three years and valid for as long as you offer spare parts or customer support for that product model, to give anyone who possesses the object code either (1) a copy of the Corresponding Source for all the software in the product that is covered by this License, on a durable physical medium customarily used for software interchange, for a price no more than your reasonable cost of physically performing this conveying of source, or (2) access to copy the Corresponding Source from a network server at no charge.
- c) Convey individual copies of the object code with a copy of the written offer to provide the Corresponding Source. This alternative is allowed only occasionally and noncommercially, and only if you received the object code with such an offer, in accord with subsection 6b.
- d) Convey the object code by offering access from a designated place (gratis or for a charge), and offer equivalent access to the Corresponding Source in the same way through the same place at no further charge. You need not require recipients to copy the Corresponding Source along with the object code. If the place to copy the object code is a network server, the Corresponding Source may be on a different server (operated by you or a third party) that supports equivalent copying facilities, provided you maintain clear directions next to the object code saying where to find the Corresponding Source. Regardless of what server hosts the Corresponding Source, you remain obligated to ensure that it is available for as long as needed to satisfy these requirements.

e) Convey the object code using peer-to-peer transmission, provided you inform other peers where the object code and Corresponding Source of the work are being offered to the general public at nocharge under subsection 6d. A separable portion of the object code, whose source code is excluded from the Corresponding Source as a System Library, need not be included in conveying the object code work.

A "User Product" is either (1) a "consumer product", which means any tangible personal property which is normally used for personal, family, or household purposes, or (2) anything designed or sold for incorporation into a dwelling. In determining whether a product is a consumer product, doubtful cases shall be resolved in favor of coverage. For a particular product received by a particular user, "normally used" refers to a typical or common use of that class of product, regardless of the status of the particular user or of the way in which the particular user actually uses, or expects or is expected to use, the product. A product is a consumer product regardless of whether the product has substantial commercial, industrial or non-consumer uses, unless such uses represent the only significant mode of use of the product.

"Installation Information" for a User Product means any methods, procedures, authorization keys, or other information required to install and execute modified versions of a covered work in that User Product from a modified version of its Corresponding Source. The information must suffice to ensure that the continued functioning of the modified object code is in no case prevented or interfered with solely because modification has been made.

If you convey an object code work under this section in, or with, or specifically for use in, a User Product, and the conveying occurs as part of a transaction in which the right of possession and use of the User Product is transferred to the recipient in perpetuity or for a fixed term (regardless of how the transaction is characterized), the Corresponding Source conveyed under this section must be accompanied by the Installation Information. But this requirement does not apply if neither you nor any third party retains the ability to install modified object code on the User Product (for example, the work has been installed in ROM). The requirement to provide Installation Information does not include a requirement to continue to provide support service, warranty, or updates for a work that has been modified or installed by the recipient, or for the User Product in which it has been modified or installed. Access to a network may be denied when the modification itself materially and adversely affects the operation of the network or violates the rules and protocols for communication across the network.

Corresponding Source conveyed, and Installation Information provided, in accord with this section must be in a format that is publicly documented (and with an implementation available to the public in source code form), and must require no special password or key for unpacking, reading or copying.

7. Additional Terms.

"Additional permissions" are terms that supplement the terms of this License by making exceptions from one or more of its conditions. Additional permissions that are applicable to

the entire Program shall be treated as though they were included in this License, to the extent that they are valid under applicable law. If additional permissions apply only to part of the Program, that part may be used separately under those permissions, but the entire Program remains governed by this License without regard to the additional permissions.

When you convey a copy of a covered work, you may at your option remove any additional permissions from that copy, or from any part of it. (Additional permissions may be written to require their own removal in certain cases when you modify the work.) You may place additional permissions on material, added by you to a covered work, for which you have or can give appropriate copyright permission. Notwithstanding any other provision of this License, for material you add to a covered work, you may (if authorized by the copyright holders of that material) supplement the terms of this License with terms.

- a) Disclaiming warranty or limiting liability differently from the terms of sections 15 and 16 of this License; or
- b) Requiring preservation of specified reasonable legal notices or author attributions in that material or in the Appropriate Legal Notices displayed by works containing it; or
- c) Prohibiting misrepresentation of the origin of that material, or requiring that modified versions of such material be marked in reasonable ways as different from the original version; or
- d) Limiting the use for publicity purposes of names of licensors or authors of the material; or
- e) Declining to grant rights under trademark law for use of some trade names, trademarks, or service marks; or
- f) Requiring indemnification of licensors and authors of that material by anyone who conveys the material (or modified versions of it) with contractual assumptions of liability to the recipient, for any liability that these contractual assumptions directly impose on those licensors and authors.

All other non-permissive additional terms are considered "further restrictions" within the meaning of section 10. If the Program as you received it, or any part of it, contains a notice stating that it is governed by this License along with a term that is a further restriction, you may remove that term. If a license document contains a further restriction but permits relicensing or conveying under this License, you may add to a covered work material governed by the terms of that license document, provided that the further restriction does not survive such relicensing or conveying.

If you add terms to a covered work in accord with this section, you must place, in the relevant source files, a statement of the additional terms that apply to those files, or a notice indicating where to find the applicable terms.

Additional terms, permissive or non-permissive, may be stated in the form of a separately written license, or stated as exceptions; the above requirements apply either way.

8. Termination.

You may not propagate or modify a covered work except as expressly provided under this License. Any attempt otherwise to propagate or modify it is void, and will automatically terminate your rights under this License (including any patent licenses granted under the third paragraph of section 11).

However, if you cease all violation of this License, then your license from a particular copyright holder is reinstated (a) provisionally, unless and until the copyright holder explicitly and finally terminates your license, and (b) permanently, if the copyright holder fails to notify you of the violation by some reasonable means prior to 60 days after the cessation.

Moreover, your license from a particular copyright holder is reinstated permanently if the copyright holder notifies you of the violation by some reasonable means, this is the first time you have received notice of violation of this License (for any work) from that copyright holder, and you cure the violation prior to 30 days after your receipt of the notice.

Termination of your rights under this section does not terminate the licenses of parties who have received copies or rights from you under this License. If your rights have been terminated and not permanently reinstated, you do not qualify to receive new licenses for the same material under section 10.

9. Acceptance Not Required for Having Copies.

You are not required to accept this License in order to receive or run a copy of the Program. Ancillary propagation of a covered work occurring solely as a consequence of using peer-to-peer transmission to receive a copy likewise does not require acceptance. However, nothing other than this License grants you permission to propagate or modify any covered work. These actions infringe copyright if you do not accept this License. Therefore, by modifying or propagating a covered work, you indicate your acceptance of this License to do so.

10. Automatic Licensing of Downstream Recipients.

Each time you convey a covered work, the recipient automatically receives a license from the original licensors, to run, modify and propagate that work, subject to this License. You are not responsible for enforcing compliance by third parties with this License.

An "entity transaction" is a transaction transferring control of an organization, or substantially all assets of one, or subdividing an organization, or merging organizations. If propagation of a covered work results from an entity transaction, each party to that transaction who receives a copy of the work also receives whatever licenses to the work the party's predecessor in interest had or could give under the previous paragraph, plus a right to possession of the Corresponding Source of the work from the predecessor in interest, if the predecessor has it or can get it with reasonable efforts.

You may not impose any further restrictions on the exercise of the rights granted or affirmed under this License. For example, you may not impose a license fee, royalty, or other charge for

exercise of rights granted under this License, and you may not initiate litigation (including a cross-claim or counterclaim in a lawsuit) alleging that any patent claim is infringed by making, using, selling, offering for sale, or importing the Program or any portion of it

11. Patents.

A "contributor" is a copyright holder who authorizes use under this License of the Program or a work on which the Program is based. The work thus licensed is called the contributor's "contributor version".

A contributor's "essential patent claims" are all patent claims owned or controlled by the contributor, whether already acquired or hereafter acquired, that would be infringed by some manner, permitted by this License, of making, using, or selling its contributor version, but do not include claims that would be infringed only as a consequence of further modification of the contributor version. For purposes of this definition, "control" includes the right to grant patent sublicenses in a manner consistent with the requirements of this License.

Each contributor grants you a non-exclusive, worldwide, royalty-free patent license under the contributor's essential patent claims, to make, use, sell, offer for sale, import and otherwise run, modify and propagate the contents of its contributor version.

In the following three paragraphs, a "patent license" is any express agreement or commitment, however denominated, not to enforce a patent (such as an express permission to practice a patent or covenant not to sue for patent infringement). To "grant" such a patent license to a party means to make such an agreement or commitment not to enforce a patent against the party.

If you convey a covered work, knowingly relying on a patent license, and the Corresponding Source of the work is not available for anyone to copy, free of charge and under the terms of this License, through a publicly available network server or other readily accessible means, then you must either (1) cause the Corresponding Source to be so available, or (2) arrange to deprive yourself of the benefit of the patent license for this particular work, or (3) arrange, in a manner consistent with the requirements of this License, to extend the patent license to downstream recipients. "Knowingly relying" means you have actual knowledge that, but for the patent license, your conveying the covered work in a country, or your recipient's use of the covered work in a country, would infringe one or more identifiable patents in that country that you have reason to believe are valid.

If, pursuant to or in connection with a single transaction or arrangement, you convey, or propagate by procuring conveyance of, a covered work, and grant a patent license to some of the parties receiving the covered work authorizing them to use, propagate, modify or convey a specific copy of the covered work, then the patent license you grant is automatically extended to all recipients of the covered work and works based on it.

A patent license is "discriminatory" if it does not include within the scope of its coverage, prohibits the exercise of, or is conditioned on the non-exercise of one or more of the rights

that are specifically granted under this License. You may not convey a covered work if you are a party to an arrangement with a third party that is in the business of distributing software, under which you make payment to the third party based on the extent of your activity of conveying the work, and under which the third party grants, to any of the parties who would receive the covered work from you, a discriminatory patent license (a) in connection with copies of the covered work conveyed by you (or copies made from those copies), or (b) primarily for and in connection with specific products or compilations that contain the covered work, unless you entered into that arrangement, or that patent license was granted, prior to 28 March 2007.

Nothing in this License shall be construed as excluding or limiting any implied license or other defenses to infringement that may otherwise be available to you under applicable patent law.

12. No Surrender of Others' Freedom.

If conditions are imposed on you (whether by court order, agreement or otherwise) that contradict the conditions of this License, they do not excuse you from the conditions of this License. If you cannot convey a covered work so as to satisfy simultaneously your obligations under this License and any other pertinent obligations, then as a consequence you may not convey it at all. For example, if you agree to terms that obligate you to collect a royalty for further conveying from those to whom you convey the Program, the only way you could satisfy both those terms and this License would be to refrain entirely from conveying the Program.

13. Use with the GNU Affero General Public License.

Notwithstanding any other provision of this License, you have permission to link or combine any covered work with a work licensed under version 3 of the GNU Affero General Public License into a single combined work, and to convey the resulting work. The terms of this License will continue to apply to the part which is the covered work, but the special requirements of the GNU Affero General Public License, section 13, concerning interaction through a network will apply to the combination as such.

14. Revised Versions of this License.

The Free Software Foundation may publish revised and/or new versions of the GNU General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns.

Each version is given a distinguishing version number. If the Program specifies that a certain numbered version of the GNU General Public License "or any later version" applies to it, you have the option of following the terms and conditions either of that numbered version or of any later version published by the Free Software Foundation. If the Program does not specify a version number of the GNU General Public License, you may choose any version ever published by the Free Software Foundation. If the Program specifies that a proxy can decide which future versions of the GNU General Public License can be used, that proxy's public statement of acceptance of a version permanently authorizes you to choose that version for the Program.

Later license versions may give you additional or different permissions. However, no additional obligations are imposed on any author or copyright holder as a result of your choosing to follow a later version.

15. Disclaimer of Warranty.

THERE IS NO WARRANTY FOR THE PROGRAM, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES PROVIDE THE PROGRAM "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE PROGRAM IS WITH YOU. SHOULD THE PROGRAM PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION.

16. Limitation of Liability.

IN NO EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MODIFIES AND/OR CONVEYS THE PROGRAM AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE PROGRAM (INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRD PARTIES OR A FAILURE OF THE PROGRAM TO OPERATE WITH ANY OTHER PROGRAMS), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

17. Interpretation of Sections 15 and 16.

If the disclaimer of warranty and limitation of liability provided above cannot be given local legal effect according to their terms, reviewing courts shall apply local law that most closely approximates an absolute waiver of all civil liability in connection with the Program, unless a warranty or assumption of liability accompanies a copy of the Program in return for a fee.

Version 0.9.5

Description

GNU GENERAL PUBLIC LICENSE Version 3, 29 June 2007

TERMS AND CONDITIONS

0. Definitions.

"This License" refers to version 3 of the GNU General Public License. "Copyright" also means copyright-like laws that apply to other kinds of works, such as semiconductor masks.

"The Program" refers to any copyrightable work licensed under this License. Each licensee is addressed as "you".

"Licensees" and "recipients" may be individuals or organizations. To "modify" a work means to copy from or adapt all or part of the work in a fashion requiring copyright permission, other than the making of an exact copy. The resulting work is called a "modified version" of the earlier work or a work "based on" the earlier work.

A "covered work" means either the unmodified Program or a work based on the Program.

To "propagate" a work means to do anything with it that, without permission, would make you directly or secondarily liable for infringement under applicable copyright law, except executing it on a computer or modifying a private copy. Propagation includes copying, distribution (with or without modification), making available to the public, and in some countries other activities as well.

To "convey" a work means any kind of propagation that enables other parties to make or receive copies. Mere interaction with a user through a computer network, with no transfer of a copy, is not conveying.

An interactive user interface displays "Appropriate Legal Notices" to the extent that it includes a convenient and prominently visible feature that (1) displays an appropriate copyright notice, and (2) tells the user that there is no warranty for the work (except to the extent that warranties are provided), that licensees may convey the work under this License, and how to view a copy of this License. If the interface presents a list of user commands or options, such as a menu, a prominent item in the list meets this criterion.

1. Source Code.

The "source code" for a work means the preferred form of the work for making modifications to it. "Object code" means any non-source form of a work.

A "Standard Interface" means an interface that either is an official standard defined by a recognized standards body, or, in the case of interfaces specified for a particular programming language, one that is widely used among developers working in that language.

The "System Libraries" of an executable work include anything, other than the work as a whole, that (a) is included in the normal form of packaging a Major Component, but which is not part of that Major Component, and (b) serves only to enable use of the work with that Major Component, or to implement a Standard Interface for which an implementation is available to the public in source code form. A "Major Component", in this context, means a major essential component (kernel, window system, and so on) of the specific operating system (if any) on which the executable work runs, or a compiler used to produce the work, or an object code interpreter used to run it.

The "Corresponding Source" for a work in object code form means all the source code needed to generate, install, and (for an executable work) run the object code and to modify the work, including scripts to control those activities. However, it does not include the work's System Libraries, or general-purpose tools or generally available free programs which are used unmodified in performing those activities but which are not part of the work. For example, Corresponding Source includes interface definition files associated with source files for the work, and the source code for shared libraries and dynamically linked subprograms that the work is specifically designed to require, such as by intimate data communication or control flow between those subprograms and other parts of the work.

The Corresponding Source need not include anything that users can regenerate automatically from other parts of the Corresponding Source. The Corresponding Source for a work in source code form is that same work.

2. Basic Permissions.

All rights granted under this License are granted for the term of copyright on the Program, and are irrevocable provided the stated conditions are met. This License explicitly affirms your unlimited permission to run the unmodified Program. The output from running a covered work is covered by this License only if the output, given its content, constitutes a covered work. This License acknowledges your rights of fair use or other equivalent, as provided by copyright law.

You may make, run and propagate covered works that you do not convey, without conditions so long as your license otherwise remains in force. You may convey covered works to others for the sole purpose of having them make modifications exclusively for you, or provide you with facilities for running those works, provided that you comply with the terms of this License in conveying all material for which you do not control copyright. Those thus making or running the covered works for you must do so exclusively on your behalf, under your direction and

control, on terms that prohibit them from making any copies of your copyrighted material outside their relationship with you.

Conveying under any other circumstances is permitted solely under the conditions stated below. Sublicensing is not allowed; section 10 makes it unnecessary.

3. Protecting Users' Legal Rights From Anti-Circumvention Law.

No covered work shall be deemed part of an effective technological measure under any applicable law fulfilling obligations under article 11 of the WIPO copyright treaty adopted on 20 December 1996, or similar laws prohibiting or restricting circumvention of such measures. When you convey a covered work, you waive any legal power to forbid

circumvention of technological measures to the extent such circumvention is effected by exercising rights under this License with respect to the covered work, and you disclaim any intention to limit operation or modification of the work as a means of enforcing, against the work's users, your or third parties' legal rights to forbid circumvention of technological measures.

4. Conveying Verbatim Copies.

You may convey verbatim copies of the Program's source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice; keep intact all notices stating that this License and any non-permissive terms added in accord with section 7 apply to the code; keep intact all notices of the absence of any warranty; and give all recipients a copy of this License along with the Program.

You may charge any price or no price for each copy that you convey, and you may offer support or warranty protection for a fee.

5. Conveying Modified Source Versions.

You may convey a work based on the Program, or the modifications to produce it from the Program, in the form of source code under the terms of section 4, provided that you also meet all of these conditions:

- a) The work must carry prominent notices stating that you modified it, and giving a relevant date.
- b) The work must carry prominent notices stating that it is released under this License and any conditions added under section 7. This requirement modifies the requirement in section 4 to "keep intact all notices"
- c) You must license the entire work, as a whole, under this License to anyone who comes into possession of a copy. This License will therefore apply, along with any applicable section 7 additional terms, to the whole of the work, and all its parts, regardless of how they are packaged. This License gives no permission to license the work in any other way, but it does not invalidate such permission if you have separately received it.

d) If the work has interactive user interfaces, each must display Appropriate Legal Notices; however, if the Program has interactive interfaces that do not display Appropriate Legal Notices, your work need not make them do so.

A compilation of a covered work with other separate and independent works, which are not by their nature extensions of the covered work, and which are not combined with it such as to form a larger program, in or on a volume of a storage or distribution medium, is called an "aggregate" if the compilation and its resulting copyright are not used to limit the access or legal rights of the compilation's users beyond what the individual works permit. Inclusion of a covered work in an aggregate does not cause this License to apply to the other parts of the aggregate.

6. Conveying Non-Source Forms.

You may convey a covered work in object code form under the terms of sections 4 and 5, provided that you also convey the machine-readable Corresponding Source under the terms of this License, in one of these ways:

- a) Convey the object code in, or embodied in, a physical product (including a physical distribution medium), accompanied by the Corresponding Source fixed on a durable physical medium customarily used for software interchange.
- b) Convey the object code in, or embodied in, a physical product (including a physical distribution medium), accompanied by a written offer, valid for at least three years and valid for as long as you offer spare parts or customer support for that product model, to give anyone who possesses the object code either (1) a copy of the Corresponding Source for all the software in the product that is covered by this License, on a durable physical medium customarily used for software interchange, for a price no more than your reasonable cost of physically performing this conveying of source, or (2) access to copy the Corresponding Source from a network server at no charge.
- c) Convey individual copies of the object code with a copy of the written offer to provide the Corresponding Source. This alternative is allowed only occasionally and noncommercially, and only if you received the object code with such an offer, in accord with subsection 6b.
- d) Convey the object code by offering access from a designated place (gratis or for a charge), and offer equivalent access to the Corresponding Source in the same way through the same place at no further charge. You need not require recipients to copy the Corresponding Source along with the object code. If the place to copy the object code is a network server, the Corresponding Source may be on a different server (operated by you or a third party) that supports equivalent copying facilities, provided you maintain clear directions next to the object code saying where to find the Corresponding Source. Regardless of what server hosts the Corresponding Source, you remain obligated to ensure that it is available for as long as needed to satisfy these requirements.

e) Convey the object code using peer-to-peer transmission, provided you inform other peers where the object code and Corresponding Source of the work are being offered to the general public at nocharge under subsection 6d. A separable portion of the object code, whose source code is excluded from the Corresponding Source as a System Library, need not be included in conveying the object code work.

A "User Product" is either (1) a "consumer product", which means any tangible personal property which is normally used for personal, family, or household purposes, or (2) anything designed or sold for incorporation into a dwelling. In determining whether a product is a consumer product, doubtful cases shall be resolved in favor of coverage. For a particular product received by a particular user, "normally used" refers to a typical or common use of that class of product, regardless of the status of the particular user or of the way in which the particular user actually uses, or expects or is expected to use, the product. A product is a consumer product regardless of whether the product has substantial commercial, industrial or non-consumer uses, unless such uses represent the only significant mode of use of the product.

"Installation Information" for a User Product means any methods, procedures, authorization keys, or other information required to install and execute modified versions of a covered work in that User Product from a modified version of its Corresponding Source. The information must suffice to ensure that the continued functioning of the modified object code is in no case prevented or interfered with solely because modification has been made.

If you convey an object code work under this section in, or with, or specifically for use in, a User Product, and the conveying occurs as part of a transaction in which the right of possession and use of the User Product is transferred to the recipient in perpetuity or for a fixed term (regardless of how the transaction is characterized), the Corresponding Source conveyed under this section must be accompanied by the Installation Information. But this requirement does not apply if neither you nor any third party retains the ability to install modified object code on the User Product (for example, the work has been installed in ROM). The requirement to provide Installation Information does not include a requirement to continue to provide support service, warranty, or updates for a work that has been modified or installed by the recipient, or for the User Product in which it has been modified or installed. Access to a network may be denied when the modification itself materially and adversely affects the operation of the network or violates the rules and protocols for communication across the network.

Corresponding Source conveyed, and Installation Information provided, in accord with this section must be in a format that is publicly documented (and with an implementation available to the public in source code form), and must require no special password or key for unpacking, reading or copying.

7. Additional Terms.

"Additional permissions" are terms that supplement the terms of this License by making exceptions from one or more of its conditions. Additional permissions that are applicable to

the entire Program shall be treated as though they were included in this License, to the extent that they are valid under applicable law. If additional permissions apply only to part of the Program, that part may be used separately under those permissions, but the entire Program remains governed by this License without regard to the additional permissions.

When you convey a copy of a covered work, you may at your option remove any additional permissions from that copy, or from any part of it. (Additional permissions may be written to require their own removal in certain cases when you modify the work.) You may place additional permissions on material, added by you to a covered work, for which you have or can give appropriate copyright permission. Notwithstanding any other provision of this License, for material you add to a covered work, you may (if authorized by the copyright holders of that material) supplement the terms of this License with terms.

- a) Disclaiming warranty or limiting liability differently from the terms of sections 15 and 16 of this License; or
- b) Requiring preservation of specified reasonable legal notices or author attributions in that material or in the Appropriate Legal Notices displayed by works containing it; or
- c) Prohibiting misrepresentation of the origin of that material, or requiring that modified versions of such material be marked in reasonable ways as different from the original version; or
- d) Limiting the use for publicity purposes of names of licensors or authors of the material; or
- e) Declining to grant rights under trademark law for use of some trade names, trademarks, or service marks; or
- f) Requiring indemnification of licensors and authors of that material by anyone who conveys the material (or modified versions of it) with contractual assumptions of liability to the recipient, for any liability that these contractual assumptions directly impose on those licensors and authors.

All other non-permissive additional terms are considered "further restrictions" within the meaning of section 10. If the Program as you received it, or any part of it, contains a notice stating that it is governed by this License along with a term that is a further restriction, you may remove that term. If a license document contains a further restriction but permits relicensing or conveying under this License, you may add to a covered work material governed by the terms of that license document, provided that the further restriction does not survive such relicensing or conveying.

If you add terms to a covered work in accord with this section, you must place, in the relevant source files, a statement of the additional terms that apply to those files, or a notice indicating where to find the applicable terms.

Additional terms, permissive or non-permissive, may be stated in the form of a separately written license, or stated as exceptions; the above requirements apply either way.

8. Termination.

You may not propagate or modify a covered work except as expressly provided under this License. Any attempt otherwise to propagate or modify it is void, and will automatically terminate your rights under this License (including any patent licenses granted under the third paragraph of section 11).

However, if you cease all violation of this License, then your license from a particular copyright holder is reinstated (a) provisionally, unless and until the copyright holder explicitly and finally terminates your license, and (b) permanently, if the copyright holder fails to notify you of the violation by some reasonable means prior to 60 days after the cessation.

Moreover, your license from a particular copyright holder is reinstated permanently if the copyright holder notifies you of the violation by some reasonable means, this is the first time you have received notice of violation of this License (for any work) from that copyright holder, and you cure the violation prior to 30 days after your receipt of the notice.

Termination of your rights under this section does not terminate the licenses of parties who have received copies or rights from you under this License. If your rights have been terminated and not permanently reinstated, you do not qualify to receive new licenses for the same material under section 10.

9. Acceptance Not Required for Having Copies.

You are not required to accept this License in order to receive or run a copy of the Program. Ancillary propagation of a covered work occurring solely as a consequence of using peer-to-peer transmission to receive a copy likewise does not require acceptance. However, nothing other than this License grants you permission to propagate or modify any covered work. These actions infringe copyright if you do not accept this License. Therefore, by modifying or propagating a covered work, you indicate your acceptance of this License to do so.

10. Automatic Licensing of Downstream Recipients.

Each time you convey a covered work, the recipient automatically receives a license from the original licensors, to run, modify and propagate that work, subject to this License. You are not responsible for enforcing compliance by third parties with this License.

An "entity transaction" is a transaction transferring control of an organization, or substantially all assets of one, or subdividing an organization, or merging organizations. If propagation of a covered work results from an entity transaction, each party to that transaction who receives a copy of the work also receives whatever licenses to the work the party's predecessor in interest had or could give under the previous paragraph, plus a right to possession of the Corresponding Source of the work from the predecessor in interest, if the predecessor has it or can get it with reasonable efforts.

You may not impose any further restrictions on the exercise of the rights granted or affirmed under this License. For example, you may not impose a license fee, royalty, or other charge for

exercise of rights granted under this License, and you may not initiate litigation (including a cross-claim or counterclaim in a lawsuit) alleging that any patent claim is infringed by making, using, selling, offering for sale, or importing the Program or any portion of it

11. Patents.

A "contributor" is a copyright holder who authorizes use under this License of the Program or a work on which the Program is based. The work thus licensed is called the contributor's "contributor version".

A contributor's "essential patent claims" are all patent claims owned or controlled by the contributor, whether already acquired or hereafter acquired, that would be infringed by some manner, permitted by this License, of making, using, or selling its contributor version, but do not include claims that would be infringed only as a consequence of further modification of the contributor version. For purposes of this definition, "control" includes the right to grant patent sublicenses in a manner consistent with the requirements of this License.

Each contributor grants you a non-exclusive, worldwide, royalty-free patent license under the contributor's essential patent claims, to make, use, sell, offer for sale, import and otherwise run, modify and propagate the contents of its contributor version.

In the following three paragraphs, a "patent license" is any express agreement or commitment, however denominated, not to enforce a patent (such as an express permission to practice a patent or covenant not to sue for patent infringement). To "grant" such a patent license to a party means to make such an agreement or commitment not to enforce a patent against the party.

If you convey a covered work, knowingly relying on a patent license, and the Corresponding Source of the work is not available for anyone to copy, free of charge and under the terms of this License, through a publicly available network server or other readily accessible means, then you must either (1) cause the Corresponding Source to be so available, or (2) arrange to deprive yourself of the benefit of the patent license for this particular work, or (3) arrange, in a manner consistent with the requirements of this License, to extend the patent license to downstream recipients. "Knowingly relying" means you have actual knowledge that, but for the patent license, your conveying the covered work in a country, or your recipient's use of the covered work in a country, would infringe one or more identifiable patents in that country that you have reason to believe are valid.

If, pursuant to or in connection with a single transaction or arrangement, you convey, or propagate by procuring conveyance of, a covered work, and grant a patent license to some of the parties receiving the covered work authorizing them to use, propagate, modify or convey a specific copy of the covered work, then the patent license you grant is automatically extended to all recipients of the covered work and works based on it.

A patent license is "discriminatory" if it does not include within the scope of its coverage, prohibits the exercise of, or is conditioned on the non-exercise of one or more of the rights

that are specifically granted under this License. You may not convey a covered work if you are a party to an arrangement with a third party that is in the business of distributing software, under which you make payment to the third party based on the extent of your activity of conveying the work, and under which the third party grants, to any of the parties who would receive the covered work from you, a discriminatory patent license (a) in connection with copies of the covered work conveyed by you (or copies made from those copies), or (b) primarily for and in connection with specific products or compilations that contain the covered work, unless you entered into that arrangement, or that patent license was granted, prior to 28 March 2007.

Nothing in this License shall be construed as excluding or limiting any implied license or other defenses to infringement that may otherwise be available to you under applicable patent law.

12. No Surrender of Others' Freedom.

If conditions are imposed on you (whether by court order, agreement or otherwise) that contradict the conditions of this License, they do not excuse you from the conditions of this License. If you cannot convey a covered work so as to satisfy simultaneously your obligations under this License and any other pertinent obligations, then as a consequence you may not convey it at all. For example, if you agree to terms that obligate you to collect a royalty for further conveying from those to whom you convey the Program, the only way you could satisfy both those terms and this License would be to refrain entirely from conveying the Program.

13. Use with the GNU Affero General Public License.

Notwithstanding any other provision of this License, you have permission to link or combine any covered work with a work licensed under version 3 of the GNU Affero General Public License into a single combined work, and to convey the resulting work. The terms of this License will continue to apply to the part which is the covered work, but the special requirements of the GNU Affero General Public License, section 13, concerning interaction through a network will apply to the combination as such.

14. Revised Versions of this License.

The Free Software Foundation may publish revised and/or new versions of the GNU General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns.

Each version is given a distinguishing version number. If the Program specifies that a certain numbered version of the GNU General Public License "or any later version" applies to it, you have the option of following the terms and conditions either of that numbered version or of any later version published by the Free Software Foundation. If the Program does not specify a version number of the GNU General Public License, you may choose any version ever published by the Free Software Foundation. If the Program specifies that a proxy can decide which future versions of the GNU General Public License can be used, that proxy's public statement of acceptance of a version permanently authorizes you to choose that version for the Program.

Later license versions may give you additional or different permissions. However, no additional obligations are imposed on any author or copyright holder as a result of your choosing to follow a later version.

15. Disclaimer of Warranty.

THERE IS NO WARRANTY FOR THE PROGRAM, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES PROVIDE THE PROGRAM "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE PROGRAM IS WITH YOU. SHOULD THE PROGRAM PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION.

16. Limitation of Liability.

IN NO EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MODIFIES AND/OR CONVEYS THE PROGRAM AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE PROGRAM (INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRD PARTIES OR A FAILURE OF THE PROGRAM TO OPERATE WITH ANY OTHER PROGRAMS), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

17. Interpretation of Sections 15 and 16.

If the disclaimer of warranty and limitation of liability provided above cannot be given local legal effect according to their terms, reviewing courts shall apply local law that most closely approximates an absolute waiver of all civil liability in connection with the Program, unless a warranty or assumption of liability accompanies a copy of the Program in return for a fee.

END OF TERMS AND CONDITIONS

Description

<http://www.apache.org/licenses/>

Version 2.0, January 2004

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

You must give any other recipients of the Work or Derivative Works a copy of this License; and

You must cause any modified files to carry prominent notices stating that You changed the files; and

You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within

such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. **Accepting Warranty or Additional Liability.** While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

Description

The GNU General Public License (GPL) Version 2, June 1991

Copyright (C) 1989, 1991 Free Software Foundation, Inc. 59 Temple Place, Suite 330, Boston, MA 02111-1307 USA

Everyone is permitted to copy and distribute verbatim copies of this license document, but changing it is not allowed.

Preamble

The licenses for most software are designed to take away your freedom to share and change it. By contrast, the GNU General Public License is intended to guarantee your freedom to share and change free software--to make sure the software is free for all its users. This General Public License applies to most of the Free Software Foundation's software and to any other program whose authors commit to using it. (Some other Free Software Foundation software is covered by the GNU Library General Public License instead.) You can apply it to your programs, too.

When we speak of free software, we are referring to freedom, not price. Our General Public Licenses are designed to make sure that you have the freedom to distribute copies of free software (and charge for this service if you wish), that you receive source code or can get it if you want it, that you can change the software or use pieces of it in new free programs; and that you know you can do these things.

To protect your rights, we need to make restrictions that forbid anyone to deny you these rights or to ask you to surrender the rights. These restrictions translate to certain responsibilities for you if you distribute copies of the software, or if you modify it.

For example, if you distribute copies of such a program, whether gratis or for a fee, you must give the recipients all the rights that you have. You must make sure that they, too, receive or can get the source code. And you must show them these terms so they know their rights.

We protect your rights with two steps: (1) copyright the software, and (2) offer you this license which gives you legal permission to copy, distribute and/or modify the software.

Also, for each author's protection and ours, we want to make certain that everyone understands that there is no warranty for this free software. If the software is modified by someone else and passed on, we want its recipients to know that what they have is not the original, so that any problems introduced by others will not reflect on the original authors' reputations.

Finally, any free program is threatened constantly by software patents. We wish to avoid the danger that redistributors of a free program will individually obtain patent licenses, in effect making the program proprietary. To prevent this, we have made it clear that any patent must be licensed for everyone's free use or not licensed at all.

The precise terms and conditions for copying, distribution and modification follow.

TERMS AND CONDITIONS FOR COPYING, DISTRIBUTION AND MODIFICATION

0. This License applies to any program or other work which contains a notice placed by the copyright holder saying it may be distributed under the terms of this General Public License. The "Program", below, refers to any such program or work, and a "work based on the Program" means either the Program or any derivative work under copyright law: that is to say, a work containing the Program or a portion of it, either verbatim or with modifications and/or translated into another language. (Hereinafter, translation is included without limitation in the term "modification".) Each licensee is addressed as "you".

Activities other than copying, distribution and modification are not covered by this License; they are outside its scope. The act of running the Program is not restricted, and the output from the Program is covered only if its contents constitute a work based on the Program (independent of having been made by running the Program). Whether that is true depends on what the Program does.

1. You may copy and distribute verbatim copies of the Program's source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice and disclaimer of warranty; keep intact all the notices that refer to this License and to the absence of any warranty; and give any other recipients of the Program a copy of this License along with the Program.

You may charge a fee for the physical act of transferring a copy, and you may at your option offer warranty protection in exchange for a fee.

2. You may modify your copy or copies of the Program or any portion of it, thus forming a work based on the Program, and copy and distribute such modifications or work under the terms of Section 1 above, provided that you also meet all of these conditions:

a) You must cause the modified files to carry prominent notices stating that you changed the files and the date of any change.

b) You must cause any work that you distribute or publish, that in whole or in part contains or is derived from the Program or any part thereof, to be licensed as a whole at no charge to all third parties under the terms of this License.

c) If the modified program normally reads commands interactively when run, you must cause it, when started running for such interactive use in the most ordinary way, to print or display an announcement including an appropriate copyright notice and a notice that there is no warranty (or else, saying that you provide a warranty) and that users may redistribute the program under these conditions, and telling the user how to view a copy of this License. (Exception: if the Program itself is interactive but does not normally print such an announcement, your work based on the Program is not required to print an announcement.)

These requirements apply to the modified work as a whole. If identifiable sections of that work are not derived from the Program, and can be reasonably considered independent and separate works in themselves, then this License, and its terms, do not apply to those sections when you distribute them as separate works. But when you distribute the same sections as part of a whole which is a work based on the Program, the distribution of the whole must be on the terms of this License, whose permissions for other licensees extend to the entire whole, and thus to each and every part regardless of who wrote it.

Thus, it is not the intent of this section to claim rights or contest your rights to work written entirely by you; rather, the intent is to exercise the right to control the distribution of derivative or collective works based on the Program.

In addition, mere aggregation of another work not based on the Program with the Program (or with a work based on the Program) on a volume of a storage or distribution medium does not bring the other work under the scope of this License.

3. You may copy and distribute the Program (or a work based on it, under Section 2) in object code or executable form under the terms of Sections 1 and 2 above provided that you also do one of the following:

a) Accompany it with the complete corresponding machine-readable source code, which must be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,

b) Accompany it with a written offer, valid for at least three years, to give any third party, for a charge no more than your cost of physically performing source distribution, a complete machine-readable copy of the corresponding source code, to be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,

c) Accompany it with the information you received as to the offer to distribute corresponding source code. (This alternative is allowed only for noncommercial distribution and only if you received the program in object code or executable form with such an offer, in accord with Subsection b above.)

The source code for a work means the preferred form of the work for making modifications to it. For an executable work, complete source code means all the source code for all modules it contains, plus any associated interface definition files, plus the scripts used to control compilation and installation of the executable. However, as a special exception, the source code distributed need not include anything that is normally distributed (in either source or binary form) with the major components (compiler, kernel, and so on) of the operating system on which the executable runs, unless that component itself accompanies the executable.

If distribution of executable or object code is made by offering access to copy from a designated place, then offering equivalent access to copy the source code from the same place counts as distribution of the source code, even though third parties are not compelled to copy the source along with the object code.

4. You may not copy, modify, sublicense, or distribute the Program except as expressly provided under this License. Any attempt otherwise to copy, modify, sublicense or distribute the Program is void, and will automatically terminate your rights under this License. However, parties who have received copies, or rights, from you under this License will not have their licenses terminated so long as such parties remain in full compliance.

5. You are not required to accept this License, since you have not signed it. However, nothing else grants you permission to modify or distribute the Program or its derivative works. These actions are prohibited by law if you do not accept this License. Therefore, by modifying or distributing the Program (or any work based on the Program), you indicate your acceptance of this License to do so, and all its terms and conditions for copying, distributing or modifying the Program or works based on it.

6. Each time you redistribute the Program (or any work based on the Program), the recipient automatically receives a license from the original licensor to copy, distribute or modify the Program subject to these terms and conditions. You may not impose any further restrictions on the recipients' exercise of the rights granted herein. You are not responsible for enforcing compliance by third parties to this License.

7. If, as a consequence of a court judgment or allegation of patent infringement or for any other reason (not limited to patent issues), conditions are imposed on you (whether by court order, agreement or otherwise) that contradict the conditions of this License, they do not excuse you from the conditions of this License. If you cannot distribute so as to satisfy simultaneously your obligations under this License and any other pertinent obligations, then as a consequence you may not distribute the Program at all. For example, if a patent license would not permit royalty-free redistribution of the Program by all those who receive copies directly or indirectly through you, then the only way you could satisfy both it and this License would be to refrain entirely from distribution of the Program.

If any portion of this section is held invalid or unenforceable under any particular circumstance, the balance of the section is intended to apply and the section as a whole is intended to apply in other circumstances.

It is not the purpose of this section to induce you to infringe any patents or other property right claims or to contest validity of any such claims; this section has the sole purpose of protecting the integrity of the free software distribution system, which is implemented by public license practices. Many people have made generous contributions to the wide range of software distributed through that system in reliance on consistent application of that system; it is up to the author/donor to decide if he or she is willing to distribute software through any other system and a licensee cannot impose that choice.

This section is intended to make thoroughly clear what is believed to be a consequence of the rest of this License.

8. If the distribution and/or use of the Program is restricted in certain countries either by patents or by copyrighted interfaces, the original copyright holder who places the Program under this License may add an explicit geographical distribution limitation excluding those countries, so that distribution is permitted only in or among countries not thus excluded. In such case, this License incorporates the limitation as if written in the body of this License.

9. The Free Software Foundation may publish revised and/or new versions of the General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns.

Each version is given a distinguishing version number. If the Program specifies a version number of this License which applies to it and "any later version", you have the option of following the terms and conditions either of that version or of any later version published by the Free Software Foundation. If the Program does not specify a version number of this License, you may choose any version ever published by the Free Software Foundation.

10. If you wish to incorporate parts of the Program into other free programs whose distribution conditions are different, write to the author to ask for permission. For software which is copyrighted by the Free Software Foundation, write to the Free Software Foundation; we sometimes make exceptions for this. Our decision will be guided by the two goals of preserving the free status of all derivatives of our free software and of promoting the sharing and reuse of software generally.

NO WARRANTY

11. BECAUSE THE PROGRAM IS LICENSED FREE OF CHARGE, THERE IS NO WARRANTY FOR THE PROGRAM, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES PROVIDE THE PROGRAM "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE PROGRAM IS WITH YOU. SHOULD THE PROGRAM PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION.

12. IN NO EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MAY MODIFY AND/OR REDISTRIBUTE THE PROGRAM AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE PROGRAM (INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRD PARTIES OR A FAILURE OF THE PROGRAM TO OPERATE WITH ANY OTHER PROGRAMS), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

FLOSS License Exception

(Adapted from <http://www.mysql.com/company/legal/licensing/foss-exception.html>)

I want specified Free/Libre and Open Source Software ("FLOSS") applications to be able to use specified GPL-licensed RRDtool libraries (the "Program") despite the fact that not all FLOSS licenses are compatible with version 2 of the GNU General Public License (the "GPL").

As a special exception to the terms and conditions of version 2.0 of the GPL:

You are free to distribute a Derivative Work that is formed entirely from the Program and one or more works (each, a "FLOSS Work") licensed under one or more of the licenses listed below, as long as:

1. You obey the GPL in all respects for the Program and the Derivative Work, except for identifiable sections of the Derivative Work which are not derived from the Program, and which can reasonably be considered independent and separate works in themselves
2. All identifiable sections of the Derivative Work which are not derived from the Program, and which can reasonably be considered independent and separate works in themselves
 - are distributed subject to one of the FLOSS licenses listed below, and
 - the object code or executable form of those sections are accompanied by the complete corresponding machine-readable source code for those sections on the same medium and under the same FLOSS license as the corresponding object code or executable forms of those sections.
3. Any works which are aggregated with the Program or with a Derivative Work on a volume of a storage or distribution medium in accordance with the GPL, can reasonably be considered independent and separate works in themselves which are not derivatives of either the Program, a Derivative Work or a FLOSS Work.

If the above conditions are not met, then the Program may only be copied, modified, distributed or used under the terms and conditions of the GPL.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the

purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution (s) alone or by combination of their Contribution(s) with the Work to which such Contribution (s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

You must give any other recipients of the Work or Derivative Works a copy of this License; and

You must cause any modified files to carry prominent notices stating that You changed the files; and

You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such

third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify,

defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

Version 2.0, January 2004

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is

intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

You must give any other recipients of the Work or Derivative Works a copy of this License; and

You must cause any modified files to carry prominent notices stating that You changed the files; and

You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of

the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License.

However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

Version 2.0, January 2004

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is

intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

You must give any other recipients of the Work or Derivative Works a copy of this License; and

You must cause any modified files to carry prominent notices stating that You changed the files; and

You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of

the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License.

However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the

purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution (s) alone or by combination of their Contribution(s) with the Work to which such Contribution (s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

You must give any other recipients of the Work or Derivative Works a copy of this License; and

You must cause any modified files to carry prominent notices stating that You changed the files; and

You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such

third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify,

defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the

purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution (s) alone or by combination of their Contribution(s) with the Work to which such Contribution (s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

You must give any other recipients of the Work or Derivative Works a copy of this License; and

You must cause any modified files to carry prominent notices stating that You changed the files; and

You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such

third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions.

Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify,

defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

Spring MVC

Copyright © 2011, Spring Source.org

<http://www.apache.org/licenses/>

Version 2.0, January 2004

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the

purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution (s) alone or by combination of their Contribution(s) with the Work to which such Contribution (s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

You must give any other recipients of the Work or Derivative Works a copy of this License; and

You must cause any modified files to carry prominent notices stating that You changed the files; and

You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such

third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify,

defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

You must give any other recipients of the Work or Derivative Works a copy of this License; and

You must cause any modified files to carry prominent notices stating that You changed the files; and

You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within

such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions.

Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. **Accepting Warranty or Additional Liability.** While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

You must give any other recipients of the Work or Derivative Works a copy of this License; and

You must cause any modified files to carry prominent notices stating that You changed the files; and

You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within

such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions.

Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. **Accepting Warranty or Additional Liability.** While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

Version 2.0, January 2004

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is

intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

You must give any other recipients of the Work or Derivative Works a copy of this License; and

You must cause any modified files to carry prominent notices stating that You changed the files; and

You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of

the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License.

However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

Version 2.0, January 2004

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the

purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution (s) alone or by combination of their Contribution(s) with the Work to which such Contribution (s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

You must give any other recipients of the Work or Derivative Works a copy of this License; and

You must cause any modified files to carry prominent notices stating that You changed the files; and

You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such

third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify,

defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

SNMP

Various copyrights apply to this package, listed in various separate parts below. Please make sure that you read all the parts. Up until 2001, the project was based at UC Davis, and the first part covers all code written during this time. From 2001 onwards, the project has been based at SourceForge, and Networks Associates Technology, Inc hold the copyright on behalf of the wider Net-SNMP community, covering all derivative work done since then. An additional copyright section has been added as Part 3 below also under a BSD license for the work contributed by Cambridge Broadband Ltd. to the project since 2001. An additional copyright section has been added as Part 4 below also under a BSD license for the work contributed by Sun Microsystems, Inc. to the project since 2003.

Code has been contributed to this project by many people over the years it has been in development, and a full list of contributors can be found in the README file under the THANKS section.

Version 2.0, January 2004

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is

intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

You must give any other recipients of the Work or Derivative Works a copy of this License; and

You must cause any modified files to carry prominent notices stating that You changed the files; and

You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of

the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License.

However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written

communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution (s) alone or by combination of their Contribution(s) with the Work to which such Contribution (s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

You must give any other recipients of the Work or Derivative Works a copy of this License; and

You must cause any modified files to carry prominent notices stating that You changed the files; and

You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational

purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify,

defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

twittersourceconstants.java

Version 2.0, January 2004

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written

communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution (s) alone or by combination of their Contribution(s) with the Work to which such Contribution (s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

You must give any other recipients of the Work or Derivative Works a copy of this License; and

You must cause any modified files to carry prominent notices stating that You changed the files; and

You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational

purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify,

defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

History of the Software

Python was created in the early 1990s by Guido van Rossum at Stichting Mathematisch Centrum (CWI, see <http://www.cwi.nl/>) in the Netherlands as a successor of a language called ABC. Guido remains Python's principal author, although it includes many contributions from others.

In 1995, Guido continued his work on Python at the Corporation for National Research Initiatives (CNRI, see <http://www.cnri.reston.va.us/>) in Reston, Virginia where he released several versions of the software.

In May 2000, Guido and the Python core development team moved to BeOpen.com to form the BeOpen PythonLabs team. In October of the same year, the PythonLabs team moved to Digital Creations (now Zope Corporation; see <http://www.zope.com/>). In 2001, the Python Software Foundation (PSF, see <http://www.python.org/psf/>) was formed, a non-profit organization created specifically to own Python-related Intellectual Property. Zope Corporation is a sponsoring member of the PSF.

All Python releases are Open Source (see <http://www.opensource.org/> for the Open Source Definition). Historically, most, but not all, Python releases have also been GPL-compatible; the table below summarizes the various releases.

Release	Derived from	Year	Owner	GPL-compatible? (1)
0.9.0 thru 1.2		1991-1995	CWI	yes
1.3 thru 1.5.2	1.2	1995-1999	CNRI	yes
1.6	1.5.2	2000	CNRI	no
2.0	1.6	2000	BeOpen.com	no
1.6.1	1.6	2001	CNRI	yes (2)
2.1	2.0+1.6.1	2001	PSF	no
2.0.1	2.0+1.6.1	2001	PSF	yes
2.1.1	2.1+2.0.1	2001	PSF	yes
2.2	2.1.1	2001	PSF	yes
2.1.2	2.1.1	2002	PSF	yes
2.1.3	2.1.2	2002	PSF	yes
2.2.1	2.2	2002	PSF	yes
2.2.2	2.2.1	2002	PSF	yes
2.2.3	2.2.2	2003	PSF	yes
2.3	2.2.2	2002-2003	PSF	yes
2.3.1	2.3	2002-2003	PSF	yes
2.3.2	2.3.1	2002-2003	PSF	yes
2.3.3	2.3.2	2002-2003	PSF	yes

2.3.4	2.3.3	2004	PSF	yes
2.3.5	2.3.4	2005	PSF	yes
2.4	2.3	2004	PSF	yes
2.4.1	2.4	2005	PSF	yes
2.4.2	2.4.1	2005	PSF	yes
2.4.3	2.4.2	2006	PSF	yes
2.5	2.4	2006	PSF	yes
2.7	2.6	2010	PSF	yes

Note: 1. GPL-compatible doesn't mean that we're distributing Python under the GPL. All Python licenses, unlike the GPL, let you distribute a modified version without making your changes open source. The GPL-compatible licenses make it possible to combine Python with other software that is released under the GPL; the others don't.

2. According to Richard Stallman, 1.6.1 is not GPL-compatible, because its license has a choice of law clause. According to CNRI, however, Stallman's lawyer has told CNRI's lawyer that 1.6.1 is "not incompatible" with the GPL.

Thanks to the many outside volunteers who have worked under Guido's direction to make these releases possible.

Terms and Conditions for Accessing or Otherwise Using Python

PYTHON SOFTWARE FOUNDATION LICENSE VERSION 2

1. This LICENSE AGREEMENT is between the Python Software Foundation ("PSF"), and the Individual or Organization ("Licensee") accessing and otherwise using this software ("Python") in source or binary form and its associated documentation.
2. Subject to the terms and conditions of this License Agreement, PSF hereby grants Licensee a nonexclusive, royalty-free, world-wide license to reproduce, analyze, test, perform and/or display publicly, prepare derivative works, distribute, and otherwise use Python alone or in any derivative version, provided, however, that PSF's License Agreement and PSF's notice of copyright, i.e., "Copyright (c) 2001, 2002, 2003, 2004, 2005, 2006 Python Software Foundation; All Rights Reserved" are retained in Python alone or in any derivative version prepared by Licensee.
3. In the event Licensee prepares a derivative work that is based on or incorporates Python or any part thereof, and wants to make the derivative work available to others as provided

herein, then Licensee hereby agrees to include in any such work a brief summary of the changes made to Python.

4. PSF is making Python available to Licensee on an "AS IS" basis. PSF MAKES NO REPRESENTATIONS OR WARRANTIES, EXPRESS OR IMPLIED. BY WAY OF EXAMPLE, BUT NOT LIMITATION, PSF MAKES NO AND DISCLAIMS ANY REPRESENTATION OR WARRANTY OF MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE OR THAT THE USE OF PYTHON WILL NOT INFRINGE ANY THIRD PARTY RIGHTS.
5. PSF SHALL NOT BE LIABLE TO LICENSEE OR ANY OTHER USERS OF PYTHON FOR ANY INCIDENTAL, SPECIAL, OR CONSEQUENTIAL DAMAGES OR LOSS AS A RESULT OF MODIFYING, DISTRIBUTING, OR OTHERWISE USING PYTHON, OR ANY DERIVATIVE THEREOF, EVEN IF ADVISED OF THE POSSIBILITY THEREOF.
6. This License Agreement will automatically terminate upon a material breach of its terms and conditions.
7. Nothing in this License Agreement shall be deemed to create any relationship of agency, partnership, or joint venture between PSF and Licensee. This License Agreement does not grant permission to use PSF trademarks or trade name in a trademark sense to endorse or promote products or services of Licensee, or any third party.
8. By copying, installing or otherwise using Python, Licensee agrees to be bound by the terms and conditions of this License Agreement.

BEOPEN.COM LICENSE AGREEMENT FOR PYTHON 2.0

BEOPEN PYTHON OPEN SOURCE LICENSE AGREEMENT VERSION 1

1. This LICENSE AGREEMENT is between BeOpen.com ("BeOpen"), having an office at 160 Saratoga Avenue, Santa Clara, CA 95051, and the Individual or Organization ("Licensee") accessing and otherwise using this software in source or binary form and its associated documentation ("the Software").
2. Subject to the terms and conditions of this BeOpen Python License Agreement, BeOpen hereby grants Licensee a non-exclusive, royalty-free, world-wide license to reproduce, analyze, test, perform and/or display publicly, prepare derivative works, distribute, and otherwise use the Software alone or in any derivative version, provided, however, that the

BeOpen Python License is retained in the Software, alone or in any derivative version prepared by Licensee.

3. BeOpen is making the Software available to Licensee on an “AS IS” basis. BEOPEN MAKES NO REPRESENTATIONS OR WARRANTIES, EXPRESS OR IMPLIED. BY WAY OF EXAMPLE, BUT NOT LIMITATION, BEOPEN MAKES NO AND DISCLAIMS ANY REPRESENTATION OR WARRANTY OF MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE OR THAT THE USE OF THE SOFTWARE WILL NOT INFRINGE ANY THIRD PARTY RIGHTS.
4. BEOPEN SHALL NOT BE LIABLE TO LICENSEE OR ANY OTHER USERS OF THE SOFTWARE FOR ANY INCIDENTAL, SPECIAL, OR CONSEQUENTIAL DAMAGES OR LOSS AS A RESULT OF USING, MODIFYING OR DISTRIBUTING THE SOFTWARE, OR ANY DERIVATIVE THEREOF, EVEN IF ADVISED OF THE POSSIBILITY THEREOF.
5. This License Agreement will automatically terminate upon a material breach of its terms and conditions.
6. This License Agreement shall be governed by and interpreted in all respects by the law of the State of California, excluding conflict of law provisions. Nothing in this License Agreement shall be deemed to create any relationship of agency, partnership, or joint venture between BeOpen and Licensee. This License Agreement does not grant permission to use BeOpen trademarks or trade names in a trademark sense to endorse or promote products or services of Licensee, or any third party. As an exception, the “BeOpen Python” logos available at <http://www.pythonlabs.com/logos.html> may be used according to the permissions granted on that web page.
7. By copying, installing or otherwise using the software, Licensee agrees to be bound by the terms and conditions of this License Agreement.

CNRI LICENSE AGREEMENT FOR PYTHON 1.6.1

1. This LICENSE AGREEMENT is between the Corporation for National Research Initiatives, having an office at 1895 Preston White Drive, Reston, VA 20191 (“CNRI”), and the Individual or Organization (“Licensee”) accessing and otherwise using Python 1.6.1 software in source or binary form and its associated documentation.
2. Subject to the terms and conditions of this License Agreement, CNRI hereby grants Licensee a nonexclusive, royalty-free, world-wide license to reproduce, analyze, test, perform and/or display publicly, prepare derivative works, distribute, and otherwise use

Python 1.6.1 alone or in any derivative version, provided, however, that CNRI's License Agreement and CNRI's notice of copyright, i.e., "Copyright © 1995-2001 Corporation for National Research Initiatives; All Rights Reserved" are retained in Python 1.6.1 alone or in any derivative version prepared by Licensee. Alternately, in lieu of CNRI's License Agreement, Licensee may substitute the following text (omitting the quotes): "Python 1.6.1 is made available subject to the terms and conditions in CNRI's License Agreement. This Agreement together with Python 1.6.1 may be located on the Internet using the following unique, persistent identifier (known as a handle): 1895.22/1013. This Agreement may also be obtained from a proxy server on the Internet using the following URL: <http://hdl.handle.net/1895.22/1013>."

3. In the event Licensee prepares a derivative work that is based on or incorporates Python 1.6.1 or any part thereof, and wants to make the derivative work available to others as provided herein, then Licensee hereby agrees to include in any such work a brief summary of the changes made to Python 1.6.1.
4. CNRI is making Python 1.6.1 available to Licensee on an "AS IS" basis. CNRI MAKES NO REPRESENTATIONS OR WARRANTIES, EXPRESS OR IMPLIED. BY WAY OF EXAMPLE, BUT NOT LIMITATION, CNRI MAKES NO AND DISCLAIMS ANY REPRESENTATION OR WARRANTY OF MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE OR THAT THE USE OF PYTHON 1.6.1 WILL NOT INFRINGE ANY THIRD PARTY RIGHTS.
5. CNRI SHALL NOT BE LIABLE TO LICENSEE OR ANY OTHER USERS OF PYTHON 1.6.1 FOR ANY INCIDENTAL, SPECIAL, OR CONSEQUENTIAL DAMAGES OR LOSS AS A RESULT OF MODIFYING, DISTRIBUTING, OR OTHERWISE USING PYTHON 1.6.1, OR ANY DERIVATIVE THEREOF, EVEN IF ADVISED OF THE POSSIBILITY THEREOF.
6. This License Agreement will automatically terminate upon a material breach of its terms and conditions.
7. This License Agreement shall be governed by the federal intellectual property law of the United States, including without limitation the federal copyright law, and, to the extent such U.S. federal law does not apply, by the law of the Commonwealth of Virginia, excluding Virginia's conflict of law provisions. Notwithstanding the foregoing, with regard to derivative works based on Python 1.6.1 that incorporate non-separable material that was previously distributed under the GNU General Public License (GPL), the law of the Commonwealth of Virginia shall govern this License Agreement only as to issues arising under or with respect to Paragraphs 4, 5, and 7 of this License Agreement. Nothing in this License Agreement shall be deemed to create any relationship of agency, partnership, or joint venture between CNRI and Licensee. This License Agreement does not grant

permission to use CNRI trademarks or trade name in a trademark sense to endorse or promote products or services of Licensee, or any third party.

8. By clicking on the “ACCEPT” button where indicated, or by copying, installing or otherwise using Python 1.6.1, Licensee agrees to be bound by the terms and conditions of this License Agreement.

ACCEPT

Version 3.9

Microsoft Reciprocal License (Ms-RL)

Description

WiX Toolset License

The WiX toolset is released under the Microsoft Reciprocal License (MS-RL). A reciprocal license is used to ensure that others who build on the effort of the WiX community give back to the WiX community. Specifically the license changes and improvements to the WiX toolset must be published using the same license.

Sometimes the reciprocal license is incorrectly interpreted to also apply to bundles, packages, custom actions built using the WiX toolset. The Outercurve Foundation has provided this statement to clarify:

The WiX toolset (WiX) is licensed under the Microsoft Reciprocal License (MS-RL). The MS-RL governs the distribution of the software licensed under it, as well as derivative works, and incorporates the definition of a derivative work provided in U.S. copyright law. OuterCurve Foundation does not view the installer packages generated by WiX as falling within the definition of a derivative work, merely because they are produced using WiX. Thus, the installer packages generated by WiX will normally fall outside the scope of the MS-RL, and any of your source code, binaries, libraries, routines or other software components that are incorporated in installer packages generated by WiX can be governed by other licensing terms.

Permission is hereby granted, free of charge, to any person obtaining a copy of this software and associated documentation files (the "Software"), to deal in the Software without restriction, including without limitation the rights to use, copy, modify, merge, publish, distribute, sublicense, and/or sell copies of the Software, and to permit persons to whom the Software is furnished to do so, subject to the following conditions:

The above copyright notice and this permission notice shall be included in all copies or substantial portions of the Software.

THE SOFTWARE IS PROVIDED "AS IS", WITHOUT WARRANTY OF ANY KIND, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO THE WARRANTIES OF MERCHANTABILITY, FITNESS

FOR A PARTICULAR PURPOSE AND NONINFRINGEMENT. IN NO EVENT SHALL THE AUTHORS OR COPYRIGHT HOLDERS BE LIABLE FOR ANY CLAIM, DAMAGES OR OTHER LIABILITY, WHETHER IN AN ACTION OF CONTRACT, TORT OR OTHERWISE, ARISING FROM, OUT OF OR IN CONNECTION WITH THE SOFTWARE OR THE USE OR OTHER DEALINGS IN THE SOFTWARE.

Version 2.0, January 2004

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the

purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution (s) alone or by combination of their Contribution(s) with the Work to which such Contribution (s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

You must give any other recipients of the Work or Derivative Works a copy of this License; and

You must cause any modified files to carry prominent notices stating that You changed the files; and

You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such

third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify,

defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS
